### 3.7.3 Field Documentation

**3.7.3.1** `std::vector<voms> vomsdata::data`

User's info, as in the certificate extension. It may contain data gathered from more than one VOMS server,

Definition at line 368 of file voms\_api.h.

**3.7.3.2** `verror_type vomsdata::error`

Error code

Definition at line 213 of file voms\_api.h.

**3.7.3.3** `std::string vomsdata::extra_data`

The data specified by the user with the --include switch.

Note that this field doesn't contain the result of a request to the VOMS server, but instead data specified by the user.

The reason for the introduction of this extension is to let a user include important data into his proxy certificate, like, for example, a kerberos ticket

Definition at line 372 of file voms\_api.h.

#### 3.7.3.4 `std::string vomsdata::workvo`

The value of the -vo option of the voms-proxy-init command
