Chapter 3

Data Structure Index

3.1 Data Structures

Here are the data structures with brief descriptions:

decaf::util::AbstractCollection < E > (This class provides a skeletal implementation of the Collection (p.1054) interface, to minimize the effort required to implement this interface)	147
decaf::util::AbstractList < E > (This class provides a skeletal implementation of the List (p.1984) interface to minimize the effort required to implement this interface backed by a "random access" data store (such as an array))	160
decaf::util::AbstractMap < K , V , COMPARATOR > (This class provides a skeletal implementation of the Map (p.2094) interface, to minimize the effort required to implement this interface)	161
decaf::util::AbstractQueue < E > (This class provides skeletal implementations of some Queue (p.2671) operations)	162
decaf::util::AbstractSequentialList < E > (This class provides a skeletal implementation of the List (p.1984) interface to minimize the effort required to implement this interface backed by a "sequential access" data store (such as a linked list))	166
decaf::util::AbstractSet < E > (This class provides a skeletal implementation of the Set (p.2905) interface to minimize the effort required to implement this interface)	167
activemq::transport::AbstractTransportFactory (Abstract implementation of the TransportFactory (p.3279) interface, providing the base functionality that's common to most of the TransportFactory (p.3279) instances)	169
activemq::core::ActiveMQAckHandler (Interface class that is used to give CMS Messages an interface to Ack themselves with)	171
activemq::commands::ActiveMQBlobMessage	172
activemq::wireformat::openwire::marshal::v3::ActiveMQBlobMessageMarshaller (Marshaling code for Open Wire Format for ActiveMQBlobMessageMarshaller (p.177))	177
activemq::wireformat::openwire::marshal::v1::ActiveMQBlobMessageMarshaller (Marshaling code for Open Wire Format for ActiveMQBlobMessageMarshaller (p.181))	181
activemq::wireformat::openwire::marshal::v4::ActiveMQBlobMessageMarshaller (Marshaling code for Open Wire Format for ActiveMQBlobMessageMarshaller (p.185))	185

activemq::wireformat::openwire::marshal::v5::ActiveMQBlobMessageMarshaller (Marshaling code for Open Wire Format for ActiveMQBlobMessageMarshaller (p. 189))	189
activemq::wireformat::openwire::marshal::v2::ActiveMQBlobMessageMarshaller (Marshaling code for Open Wire Format for ActiveMQBlobMessageMarshaller (p. 193))	193
activemq::commands::ActiveMQBytesMessage	197
activemq::wireformat::openwire::marshal::v3::ActiveMQBytesMessageMarshaller (Marshaling code for Open Wire Format for ActiveMQBytesMessageMarshaller (p. 213))	213
activemq::wireformat::openwire::marshal::v1::ActiveMQBytesMessageMarshaller (Marshaling code for Open Wire Format for ActiveMQBytesMessageMarshaller (p. 217))	217
activemq::wireformat::openwire::marshal::v4::ActiveMQBytesMessageMarshaller (Marshaling code for Open Wire Format for ActiveMQBytesMessageMarshaller (p. 221))	221
activemq::wireformat::openwire::marshal::v5::ActiveMQBytesMessageMarshaller (Marshaling code for Open Wire Format for ActiveMQBytesMessageMarshaller (p. 225))	225
activemq::wireformat::openwire::marshal::v2::ActiveMQBytesMessageMarshaller (Marshaling code for Open Wire Format for ActiveMQBytesMessageMarshaller (p. 229))	229
activemq::core::ActiveMQConnection (Concrete connection used for all connectors to the ActiveMQ broker)	233
activemq::core::ActiveMQConnectionFactory	244
activemq::core::ActiveMQConnectionMetaData (This class houses all the various settings and information that is used by an instance of an ActiveMQConnection (p. 233) class)	249
activemq::core::ActiveMQConnectionSupport	253
activemq::core::ActiveMQConstants (Class holding constant values for various ActiveMQ specific things Each constant is defined as an enumeration and has functions that convert back an forth between string and enum values)	260
activemq::core::ActiveMQConsumer	263
activemq::library::ActiveMQCPP	272
activemq::commands::ActiveMQDestination	274
activemq::wireformat::openwire::marshal::v3::ActiveMQDestinationMarshaller (Marshaling code for Open Wire Format for ActiveMQDestinationMarshaller (p. 285))	285
activemq::wireformat::openwire::marshal::v1::ActiveMQDestinationMarshaller (Marshaling code for Open Wire Format for ActiveMQDestinationMarshaller (p. 289))	289
activemq::wireformat::openwire::marshal::v4::ActiveMQDestinationMarshaller (Marshaling code for Open Wire Format for ActiveMQDestinationMarshaller (p. 293))	293
activemq::wireformat::openwire::marshal::v5::ActiveMQDestinationMarshaller (Marshaling code for Open Wire Format for ActiveMQDestinationMarshaller (p. 297))	297
activemq::wireformat::openwire::marshal::v2::ActiveMQDestinationMarshaller (Marshaling code for Open Wire Format for ActiveMQDestinationMarshaller (p. 301))	301
activemq::exceptions::ActiveMQException	305
activemq::commands::ActiveMQMapMessage	308

activemq::wireformat::openwire::marshal::v3::ActiveMQMapMessageMarshaller (Marshaling code for Open Wire Format for ActiveMQMapMessageMarshaller (p. 322))	322
activemq::wireformat::openwire::marshal::v1::ActiveMQMapMessageMarshaller (Marshaling code for Open Wire Format for ActiveMQMapMessageMarshaller (p. 326))	326
activemq::wireformat::openwire::marshal::v4::ActiveMQMapMessageMarshaller (Marshaling code for Open Wire Format for ActiveMQMapMessageMarshaller (p. 330))	330
activemq::wireformat::openwire::marshal::v5::ActiveMQMapMessageMarshaller (Marshaling code for Open Wire Format for ActiveMQMapMessageMarshaller (p. 334))	334
activemq::wireformat::openwire::marshal::v2::ActiveMQMapMessageMarshaller (Marshaling code for Open Wire Format for ActiveMQMapMessageMarshaller (p. 338))	338
activemq::commands::ActiveMQMessage	342
activemq::wireformat::openwire::marshal::v3::ActiveMQMessageMarshaller (Marshaling code for Open Wire Format for ActiveMQMessageMarshaller (p. 345))	345
activemq::wireformat::openwire::marshal::v1::ActiveMQMessageMarshaller (Marshaling code for Open Wire Format for ActiveMQMessageMarshaller (p. 349))	349
activemq::wireformat::openwire::marshal::v4::ActiveMQMessageMarshaller (Marshaling code for Open Wire Format for ActiveMQMessageMarshaller (p. 353))	353
activemq::wireformat::openwire::marshal::v5::ActiveMQMessageMarshaller (Marshaling code for Open Wire Format for ActiveMQMessageMarshaller (p. 357))	357
activemq::wireformat::openwire::marshal::v2::ActiveMQMessageMarshaller (Marshaling code for Open Wire Format for ActiveMQMessageMarshaller (p. 361))	361
activemq::commands::ActiveMQMessageTemplate< T >	365
activemq::commands::ActiveMQObjectMessage	383
activemq::wireformat::openwire::marshal::v3::ActiveMQObjectMessageMarshaller (Marshaling code for Open Wire Format for ActiveMQObjectMessageMarshaller (p. 386))	386
activemq::wireformat::openwire::marshal::v1::ActiveMQObjectMessageMarshaller (Marshaling code for Open Wire Format for ActiveMQObjectMessageMarshaller (p. 390))	390
activemq::wireformat::openwire::marshal::v4::ActiveMQObjectMessageMarshaller (Marshaling code for Open Wire Format for ActiveMQObjectMessageMarshaller (p. 394))	394
activemq::wireformat::openwire::marshal::v5::ActiveMQObjectMessageMarshaller (Marshaling code for Open Wire Format for ActiveMQObjectMessageMarshaller (p. 398))	398
activemq::wireformat::openwire::marshal::v2::ActiveMQObjectMessageMarshaller (Marshaling code for Open Wire Format for ActiveMQObjectMessageMarshaller (p. 402))	402
activemq::core::ActiveMQProducer	406
activemq::util::ActiveMQProperties (Implementation of the CMSProperties interface that delegates to a decaf::util::Properties (p. 2657) object)	414
activemq::commands::ActiveMQQueue	419

activemq::wireformat::openwire::marshal::v3::ActiveMQQueueMarshaller (Marshaling code for Open Wire Format for ActiveMQQueueMarshaller (p. 423))	423
activemq::wireformat::openwire::marshal::v1::ActiveMQQueueMarshaller (Marshaling code for Open Wire Format for ActiveMQQueueMarshaller (p. 427))	427
activemq::wireformat::openwire::marshal::v4::ActiveMQQueueMarshaller (Marshaling code for Open Wire Format for ActiveMQQueueMarshaller (p. 431))	431
activemq::wireformat::openwire::marshal::v5::ActiveMQQueueMarshaller (Marshaling code for Open Wire Format for ActiveMQQueueMarshaller (p. 435))	435
activemq::wireformat::openwire::marshal::v2::ActiveMQQueueMarshaller (Marshaling code for Open Wire Format for ActiveMQQueueMarshaller (p. 439))	439
activemq::core::ActiveMQSession	443
activemq::core::ActiveMQSessionExecutor (Delegate dispatcher for a single session)	460
activemq::commands::ActiveMQStreamMessage	464
activemq::wireformat::openwire::marshal::v3::ActiveMQStreamMessageMarshaller (Marshaling code for Open Wire Format for ActiveMQStreamMessage- Marshaller (p. 479))	479
activemq::wireformat::openwire::marshal::v1::ActiveMQStreamMessageMarshaller (Marshaling code for Open Wire Format for ActiveMQStreamMessage- Marshaller (p. 483))	483
activemq::wireformat::openwire::marshal::v4::ActiveMQStreamMessageMarshaller (Marshaling code for Open Wire Format for ActiveMQStreamMessage- Marshaller (p. 487))	487
activemq::wireformat::openwire::marshal::v5::ActiveMQStreamMessageMarshaller (Marshaling code for Open Wire Format for ActiveMQStreamMessage- Marshaller (p. 491))	491
activemq::wireformat::openwire::marshal::v2::ActiveMQStreamMessageMarshaller (Marshaling code for Open Wire Format for ActiveMQStreamMessage- Marshaller (p. 495))	495
activemq::commands::ActiveMQTempDestination	499
activemq::wireformat::openwire::marshal::v3::ActiveMQTempDestinationMarshaller (Marshaling code for Open Wire Format for ActiveMQTempDestination- Marshaller (p. 503))	503
activemq::wireformat::openwire::marshal::v1::ActiveMQTempDestinationMarshaller (Marshaling code for Open Wire Format for ActiveMQTempDestination- Marshaller (p. 507))	507
activemq::wireformat::openwire::marshal::v4::ActiveMQTempDestinationMarshaller (Marshaling code for Open Wire Format for ActiveMQTempDestination- Marshaller (p. 511))	511
activemq::wireformat::openwire::marshal::v5::ActiveMQTempDestinationMarshaller (Marshaling code for Open Wire Format for ActiveMQTempDestination- Marshaller (p. 515))	515
activemq::wireformat::openwire::marshal::v2::ActiveMQTempDestinationMarshaller (Marshaling code for Open Wire Format for ActiveMQTempDestination- Marshaller (p. 519))	519
activemq::commands::ActiveMQTempQueue	523
activemq::wireformat::openwire::marshal::v3::ActiveMQTempQueueMarshaller (Marshaling code for Open Wire Format for ActiveMQTempQueueMar- shaller (p. 528))	528

activemq::wireformat::openwire::marshal::v1::ActiveMQTempQueueMarshaller (Marshaling code for Open Wire Format for ActiveMQTempQueueMarshaller (p. 532))	532
activemq::wireformat::openwire::marshal::v4::ActiveMQTempQueueMarshaller (Marshaling code for Open Wire Format for ActiveMQTempQueueMarshaller (p. 536))	536
activemq::wireformat::openwire::marshal::v5::ActiveMQTempQueueMarshaller (Marshaling code for Open Wire Format for ActiveMQTempQueueMarshaller (p. 540))	540
activemq::wireformat::openwire::marshal::v2::ActiveMQTempQueueMarshaller (Marshaling code for Open Wire Format for ActiveMQTempQueueMarshaller (p. 544))	544
activemq::commands::ActiveMQTempTopic	548
activemq::wireformat::openwire::marshal::v3::ActiveMQTempTopicMarshaller (Marshaling code for Open Wire Format for ActiveMQTempTopicMarshaller (p. 553))	553
activemq::wireformat::openwire::marshal::v1::ActiveMQTempTopicMarshaller (Marshaling code for Open Wire Format for ActiveMQTempTopicMarshaller (p. 557))	557
activemq::wireformat::openwire::marshal::v4::ActiveMQTempTopicMarshaller (Marshaling code for Open Wire Format for ActiveMQTempTopicMarshaller (p. 561))	561
activemq::wireformat::openwire::marshal::v5::ActiveMQTempTopicMarshaller (Marshaling code for Open Wire Format for ActiveMQTempTopicMarshaller (p. 565))	565
activemq::wireformat::openwire::marshal::v2::ActiveMQTempTopicMarshaller (Marshaling code for Open Wire Format for ActiveMQTempTopicMarshaller (p. 569))	569
activemq::commands::ActiveMQTextMessage	573
activemq::wireformat::openwire::marshal::v3::ActiveMQTextMessageMarshaller (Marshaling code for Open Wire Format for ActiveMQTextMessageMarshaller (p. 578))	578
activemq::wireformat::openwire::marshal::v1::ActiveMQTextMessageMarshaller (Marshaling code for Open Wire Format for ActiveMQTextMessageMarshaller (p. 582))	582
activemq::wireformat::openwire::marshal::v4::ActiveMQTextMessageMarshaller (Marshaling code for Open Wire Format for ActiveMQTextMessageMarshaller (p. 586))	586
activemq::wireformat::openwire::marshal::v5::ActiveMQTextMessageMarshaller (Marshaling code for Open Wire Format for ActiveMQTextMessageMarshaller (p. 590))	590
activemq::wireformat::openwire::marshal::v2::ActiveMQTextMessageMarshaller (Marshaling code for Open Wire Format for ActiveMQTextMessageMarshaller (p. 594))	594
activemq::commands::ActiveMQTopic	598
activemq::wireformat::openwire::marshal::v3::ActiveMQTopicMarshaller (Marshaling code for Open Wire Format for ActiveMQTopicMarshaller (p. 602))	602
activemq::wireformat::openwire::marshal::v1::ActiveMQTopicMarshaller (Marshaling code for Open Wire Format for ActiveMQTopicMarshaller (p. 606))	606
activemq::wireformat::openwire::marshal::v4::ActiveMQTopicMarshaller (Marshaling code for Open Wire Format for ActiveMQTopicMarshaller (p. 610))	610

activemq::wireformat::openwire::marshal::v5::ActiveMQTopicMarshaller (Marshaling code for Open Wire Format for ActiveMQTopicMarshaller (p. 614))	614
activemq::wireformat::openwire::marshal::v2::ActiveMQTopicMarshaller (Marshaling code for Open Wire Format for ActiveMQTopicMarshaller (p. 618))	618
activemq::core::ActiveMQTransactionContext (Transaction Management class, hold messages that are to be redelivered upon a request to roll-back)	622
decaf::lang::Appendable	626
decaf::internal::AprPool (Wraps an APR pool object so that classes in decaf can create a static member for use in static methods where apr function calls that need a pool are made)	628
decaf::util::concurrent::atomic::AtomicBoolean (A boolean value that may be up- dated atomically)	630
decaf::util::concurrent::atomic::AtomicInteger (An int value that may be updated atomically)	633
decaf::lang::AtomicRefCounter	638
decaf::util::concurrent::atomic::AtomicReference< T > (An Pointer reference that may be updated atomically)	641
activemq::transport::failover::BackupTransport	644
activemq::transport::failover::BackupTransportPool	647
activemq::commands::BaseCommand	650
activemq::wireformat::openwire::marshal::v3::BaseCommandMarshaller (Marshaling code for Open Wire Format for BaseCommandMarshaller (p. 657))	657
activemq::wireformat::openwire::marshal::v1::BaseCommandMarshaller (Marshaling code for Open Wire Format for BaseCommandMarshaller (p. 664))	664
activemq::wireformat::openwire::marshal::v4::BaseCommandMarshaller (Marshaling code for Open Wire Format for BaseCommandMarshaller (p. 671))	671
activemq::wireformat::openwire::marshal::v5::BaseCommandMarshaller (Marshaling code for Open Wire Format for BaseCommandMarshaller (p. 678))	678
activemq::wireformat::openwire::marshal::v2::BaseCommandMarshaller (Marshaling code for Open Wire Format for BaseCommandMarshaller (p. 685))	685
activemq::wireformat::openwire::marshal::BaseDataStreamMarshaller (Base class for all Marshallers that marshal DataStructures to and from the wire using the OpenWire protocol)	692
activemq::commands::BaseDataStructure	715
binary_function	720
decaf::net::BindException	721
decaf::io::BlockingByteArrayInputStream (This is a blocking version of a byte buffer stream)	724
decaf::lang::Boolean	732
activemq::commands::BooleanExpression	737
activemq::wireformat::openwire::utils::BooleanStream (Manages the writing and reading of boolean data streams to and from a data source such as a DataInput- Stream or DataOutputStream)	739
decaf::util::concurrent::BrokenBarrierException	742
activemq::commands::BrokerError (This class represents an Exception sent from the Broker)	745
activemq::exceptions::BrokerException	749

activemq::commands::BrokerId	751
activemq::wireformat::openwire::marshal::v3::BrokerIdMarshaller (Marshaling code for Open Wire Format for BrokerIdMarshaller (p. 755))	755
activemq::wireformat::openwire::marshal::v1::BrokerIdMarshaller (Marshaling code for Open Wire Format for BrokerIdMarshaller (p. 759))	759
activemq::wireformat::openwire::marshal::v4::BrokerIdMarshaller (Marshaling code for Open Wire Format for BrokerIdMarshaller (p. 763))	763
activemq::wireformat::openwire::marshal::v5::BrokerIdMarshaller (Marshaling code for Open Wire Format for BrokerIdMarshaller (p. 767))	767
activemq::wireformat::openwire::marshal::v2::BrokerIdMarshaller (Marshaling code for Open Wire Format for BrokerIdMarshaller (p. 771))	771
activemq::commands::BrokerInfo	775
activemq::wireformat::openwire::marshal::v3::BrokerInfoMarshaller (Marshaling code for Open Wire Format for BrokerInfoMarshaller (p. 783))	783
activemq::wireformat::openwire::marshal::v1::BrokerInfoMarshaller (Marshaling code for Open Wire Format for BrokerInfoMarshaller (p. 787))	787
activemq::wireformat::openwire::marshal::v4::BrokerInfoMarshaller (Marshaling code for Open Wire Format for BrokerInfoMarshaller (p. 791))	791
activemq::wireformat::openwire::marshal::v5::BrokerInfoMarshaller (Marshaling code for Open Wire Format for BrokerInfoMarshaller (p. 795))	795
activemq::wireformat::openwire::marshal::v2::BrokerInfoMarshaller (Marshaling code for Open Wire Format for BrokerInfoMarshaller (p. 799))	799
decaf::nio::Buffer (A container for data of a specific primitive type)	803
decaf::io::BufferedInputStream (A wrapper around another input stream that performs a buffered read, where it reads more data than it needs in order to reduce the number of io operations on the input stream)	809
decaf::io::BufferedOutputStream (Wrapper around another output stream that buffers output before writing to the target output stream)	814
decaf::net::BufferedSocket (Buffered Socket (p. 2964) class that wraps a Socket (p. 2964) derived object and provides Buffered input and Output Streams to improve the efficiency of the reads and writes)	817
decaf::internal::nio::BufferFactory (Factory class used by static methods in the decaf::nio (p. 128) package to create the various default version of the NIO interfaces)	824
decaf::nio::BufferOverflowException	834
decaf::nio::BufferUnderflowException	837
decaf::lang::Byte	840
decaf::internal::util::ByteArrayAdapter (This class adapts primitive type arrays to a base byte array so that the classes can inter-operate on the same base byte array without copying data)	849
decaf::internal::nio::ByteArrayBuffer (This class defines six categories of operations upon byte buffers:)	870
decaf::io::ByteArrayInputStream (Simple implementation of InputStream (p. 1740) that wraps around an STL Vector <code>std::vector<unsigned char></code>)	892
decaf::io::ByteArrayOutputStream	900
decaf::internal::nio::ByteArrayPerspective (This class extends ByteArray to create a reference counted byte array that can be held and used by several different ByteBuffers and allow them to know on destruction whose job it is to delete the perspective)	908
decaf::nio::ByteBuffer (This class defines six categories of operations upon byte buffers:)	913
cms::BytesMessage (A BytesMessage (p. 938) object is used to send a message containing a stream of unsigned bytes)	938

activemq::cmsutil::CachedConsumer (A cached message consumer contained within a pooled session)	953
activemq::cmsutil::CachedProducer (A cached message producer contained within a pooled session)	957
decaf::util::concurrent::Callable< V > (A task that returns a result and may throw an exception)	964
decaf::util::concurrent::CancellationException	965
decaf::security::cert::Certificate (Base interface for all identity certificates)	968
decaf::security::cert::CertificateEncodingException	972
decaf::security::cert::CertificateException	974
decaf::security::cert::CertificateExpiredException	976
decaf::security::cert::CertificateNotYetValidException	978
decaf::security::cert::CertificateParsingException	980
decaf::lang::Character	982
decaf::internal::nio::CharArrayBuffer	990
decaf::nio::CharBuffer (This class defines four categories of operations upon character buffers:)	998
decaf::lang::CharSequence (A CharSequence (p. 1014) is a readable sequence of char values)	1014
decaf::lang::exceptions::ClassCastException	1016
decaf::io::Closeable (Interface for a class that implements the close method)	1019
cms::Closeable (Interface for a class that implements the close method)	1021
activemq::transport::failover::CloseTransportsTask	1022
activemq::cmsutil::CmsAccessor (Base class for activemq::cmsutil::CmsTemplate (p. 1041) and other CMS-accessing gateway helpers, defining common properties such as the CMS cms::ConnectionFactory (p. 1184) to operate on)	1024
activemq::cmsutil::CmsDestinationAccessor (Extends the CmsAccessor (p. 1024) to add support for resolving destination names)	1028
cms::CMSException (CMS API Exception that is the base for all exceptions thrown from CMS classes)	1031
activemq::util::CMSExceptionSupport	1034
cms::CMSProperties (Interface for a Java-like properties object)	1036
cms::CMSSecurityException (This exception must be thrown when a provider rejects a user name/password submitted by a client)	1040
activemq::cmsutil::CmsTemplate (CmsTemplate (p. 1041) simplifies performing synchronous CMS operations)	1041
decaf::util::Collection< E > (The root interface in the collection hierarchy)	1054
activemq::commands::Command	1063
activemq::state::CommandVisitor (Interface for an Object that can visit the various Command Objects that are sent from and to this client)	1069
activemq::state::CommandVisitorAdapter (Default Implementation of a CommandVisitor (p. 1069) that returns NULL for all calls)	1077
decaf::lang::Comparable< T > (This interface imposes a total ordering on the objects of each class that implements it)	1083
decaf::util::Comparator< T > (A comparison function, which imposes a total ordering on some collection of objects)	1086
activemq::util::CompositeData (Represents a Composite URI)	1088
activemq::threads::CompositeTask (Represents a single task that can be part of a set of Tasks that are contained in a CompositeTaskRunner (p. 1092))	1090
activemq::threads::CompositeTaskRunner (A Task (p. 3148) Runner that can contain one or more CompositeTasks that are each checked for pending work and run if any is present in the order that the tasks were added)	1092
activemq::transport::CompositeTransport (A Composite Transport (p. 3273) is a Transport (p. 3273) implementation that is composed of several Transports)	1095

decaf::util::concurrent::ConcurrentMap < K , V , COMPARATOR > (Interface for a Map (p. 2094) type that provides additional atomic putIfAbsent , remove , and replace methods alongside the already available Map (p. 2094) interface) .	1097
decaf::util::concurrent::ConcurrentStlMap < K , V , COMPARATOR > (Map (p. 2094) template that wraps around a std::map to provide a more user-friendly interface and to provide common functions that do not exist in std::map) . . .	1102
decaf::util::concurrent::locks::Condition (Condition (p. 1118) factors out the Mutex (p. 2385) monitor methods (wait , notify and notifyAll) into distinct objects to give the effect of having multiple wait-sets per object, by combining them with the use of arbitrary Lock (p. 2017) implementations)	1118
decaf::util::concurrent::ConditionHandle	1124
decaf::internal::util::concurrent::ConditionImpl	1126
decaf::net::ConnectException	1128
cms::Connection (The client's connection to its provider)	1131
activemq::commands::ConnectionControl	1135
activemq::wireformat::openwire::marshal::v3::ConnectionControlMarshaller (Marshaling code for Open Wire Format for ConnectionControlMarshaller (p. 1140))	1140
activemq::wireformat::openwire::marshal::v1::ConnectionControlMarshaller (Marshaling code for Open Wire Format for ConnectionControlMarshaller (p. 1144))	1144
activemq::wireformat::openwire::marshal::v4::ConnectionControlMarshaller (Marshaling code for Open Wire Format for ConnectionControlMarshaller (p. 1148))	1148
activemq::wireformat::openwire::marshal::v5::ConnectionControlMarshaller (Marshaling code for Open Wire Format for ConnectionControlMarshaller (p. 1152))	1152
activemq::wireformat::openwire::marshal::v2::ConnectionControlMarshaller (Marshaling code for Open Wire Format for ConnectionControlMarshaller (p. 1156))	1156
activemq::commands::ConnectionError	1160
activemq::wireformat::openwire::marshal::v3::ConnectionErrorMarshaller (Marshaling code for Open Wire Format for ConnectionErrorMarshaller (p. 1164))	1164
activemq::wireformat::openwire::marshal::v1::ConnectionErrorMarshaller (Marshaling code for Open Wire Format for ConnectionErrorMarshaller (p. 1168))	1168
activemq::wireformat::openwire::marshal::v4::ConnectionErrorMarshaller (Marshaling code for Open Wire Format for ConnectionErrorMarshaller (p. 1172))	1172
activemq::wireformat::openwire::marshal::v5::ConnectionErrorMarshaller (Marshaling code for Open Wire Format for ConnectionErrorMarshaller (p. 1176))	1176
activemq::wireformat::openwire::marshal::v2::ConnectionErrorMarshaller (Marshaling code for Open Wire Format for ConnectionErrorMarshaller (p. 1180))	1180
cms::ConnectionFactory (Defines the interface for a factory that creates connection objects, the Connection (p. 1131) objects returned implement the CMS Connection (p. 1131) interface and hide the CMS Provider specific implementation details behind that interface)	1184
activemq::commands::ConnectionId	1187
activemq::wireformat::openwire::marshal::v3::ConnectionIdMarshaller (Marshaling code for Open Wire Format for ConnectionIdMarshaller (p. 1191))	1191

activemq::wireformat::openwire::marshal::v1::ConnectionIdMarshaller (Marshaling code for Open Wire Format for ConnectionIdMarshaller (p. 1195))	1195
activemq::wireformat::openwire::marshal::v4::ConnectionIdMarshaller (Marshaling code for Open Wire Format for ConnectionIdMarshaller (p. 1199))	1199
activemq::wireformat::openwire::marshal::v5::ConnectionIdMarshaller (Marshaling code for Open Wire Format for ConnectionIdMarshaller (p. 1203))	1203
activemq::wireformat::openwire::marshal::v2::ConnectionIdMarshaller (Marshaling code for Open Wire Format for ConnectionIdMarshaller (p. 1207))	1207
activemq::commands::ConnectionInfo	1211
activemq::wireformat::openwire::marshal::v3::ConnectionInfoMarshaller (Marshaling code for Open Wire Format for ConnectionInfoMarshaller (p. 1217))	1217
activemq::wireformat::openwire::marshal::v4::ConnectionInfoMarshaller (Marshaling code for Open Wire Format for ConnectionInfoMarshaller (p. 1221))	1221
activemq::wireformat::openwire::marshal::v1::ConnectionInfoMarshaller (Marshaling code for Open Wire Format for ConnectionInfoMarshaller (p. 1225))	1225
activemq::wireformat::openwire::marshal::v5::ConnectionInfoMarshaller (Marshaling code for Open Wire Format for ConnectionInfoMarshaller (p. 1229))	1229
activemq::wireformat::openwire::marshal::v2::ConnectionInfoMarshaller (Marshaling code for Open Wire Format for ConnectionInfoMarshaller (p. 1233))	1233
cms::ConnectionMetaData (A ConnectionMetaData (p. 1237) object provides information describing the Connection (p. 1131) object)	1237
activemq::state::ConnectionState	1241
activemq::state::ConnectionStateTracker	1244
activemq::commands::ConsumerControl	1250
activemq::wireformat::openwire::marshal::v3::ConsumerControlMarshaller (Marshaling code for Open Wire Format for ConsumerControlMarshaller (p. 1255))	1255
activemq::wireformat::openwire::marshal::v4::ConsumerControlMarshaller (Marshaling code for Open Wire Format for ConsumerControlMarshaller (p. 1259))	1259
activemq::wireformat::openwire::marshal::v1::ConsumerControlMarshaller (Marshaling code for Open Wire Format for ConsumerControlMarshaller (p. 1263))	1263
activemq::wireformat::openwire::marshal::v5::ConsumerControlMarshaller (Marshaling code for Open Wire Format for ConsumerControlMarshaller (p. 1267))	1267
activemq::wireformat::openwire::marshal::v2::ConsumerControlMarshaller (Marshaling code for Open Wire Format for ConsumerControlMarshaller (p. 1271))	1271
activemq::commands::ConsumerId	1275
activemq::wireformat::openwire::marshal::v3::ConsumerIdMarshaller (Marshaling code for Open Wire Format for ConsumerIdMarshaller (p. 1280))	1280

activemq::wireformat::openwire::marshal::v4::ConsumerIdMarshaller (Marshaling code for Open Wire Format for ConsumerIdMarshaller (p. 1284))	1284
activemq::wireformat::openwire::marshal::v1::ConsumerIdMarshaller (Marshaling code for Open Wire Format for ConsumerIdMarshaller (p. 1288))	1288
activemq::wireformat::openwire::marshal::v5::ConsumerIdMarshaller (Marshaling code for Open Wire Format for ConsumerIdMarshaller (p. 1292))	1292
activemq::wireformat::openwire::marshal::v2::ConsumerIdMarshaller (Marshaling code for Open Wire Format for ConsumerIdMarshaller (p. 1296))	1296
activemq::commands::ConsumerInfo	1300
activemq::wireformat::openwire::marshal::v3::ConsumerInfoMarshaller (Marshaling code for Open Wire Format for ConsumerInfoMarshaller (p. 1309))	1309
activemq::wireformat::openwire::marshal::v1::ConsumerInfoMarshaller (Marshaling code for Open Wire Format for ConsumerInfoMarshaller (p. 1313))	1313
activemq::wireformat::openwire::marshal::v4::ConsumerInfoMarshaller (Marshaling code for Open Wire Format for ConsumerInfoMarshaller (p. 1317))	1317
activemq::wireformat::openwire::marshal::v5::ConsumerInfoMarshaller (Marshaling code for Open Wire Format for ConsumerInfoMarshaller (p. 1321))	1321
activemq::wireformat::openwire::marshal::v2::ConsumerInfoMarshaller (Marshaling code for Open Wire Format for ConsumerInfoMarshaller (p. 1325))	1325
activemq::state::ConsumerState	1329
activemq::commands::ControlCommand	1330
activemq::wireformat::openwire::marshal::v3::ControlCommandMarshaller (Marshaling code for Open Wire Format for ControlCommandMarshaller (p. 1334))	1334
activemq::wireformat::openwire::marshal::v4::ControlCommandMarshaller (Marshaling code for Open Wire Format for ControlCommandMarshaller (p. 1338))	1338
activemq::wireformat::openwire::marshal::v1::ControlCommandMarshaller (Marshaling code for Open Wire Format for ControlCommandMarshaller (p. 1342))	1342
activemq::wireformat::openwire::marshal::v5::ControlCommandMarshaller (Marshaling code for Open Wire Format for ControlCommandMarshaller (p. 1346))	1346
activemq::wireformat::openwire::marshal::v2::ControlCommandMarshaller (Marshaling code for Open Wire Format for ControlCommandMarshaller (p. 1350))	1350
decaf::util::concurrent::CountDownLatch	1354
activemq::commands::DataArrayResponse	1356
activemq::wireformat::openwire::marshal::v3::DataArrayResponseMarshaller (Marshaling code for Open Wire Format for DataArrayResponseMarshaller (p. 1359))	1359
activemq::wireformat::openwire::marshal::v4::DataArrayResponseMarshaller (Marshaling code for Open Wire Format for DataArrayResponseMarshaller (p. 1363))	1363

activemq::wireformat::openwire::marshal::v1::DataArrayResponseMarshaller (Marshaling code for Open Wire Format for DataArrayResponseMarshaller (p. 1367))	1367
activemq::wireformat::openwire::marshal::v5::DataArrayResponseMarshaller (Marshaling code for Open Wire Format for DataArrayResponseMarshaller (p. 1371))	1371
activemq::wireformat::openwire::marshal::v2::DataArrayResponseMarshaller (Marshaling code for Open Wire Format for DataArrayResponseMarshaller (p. 1375))	1375
decaf::io::DataInputStream (A data input stream lets an application read primitive Java data types from an underlying input stream in a machine-independent way)	1379
decaf::io::DataOutputStream (A data output stream lets an application write prim- itive Java data types to an output stream in a portable way)	1388
activemq::commands::DataResponse	1395
activemq::wireformat::openwire::marshal::v3::DataResponseMarshaller (Mar- shaling code for Open Wire Format for DataResponseMarshaller (p. 1398))	1398
activemq::wireformat::openwire::marshal::v1::DataResponseMarshaller (Mar- shaling code for Open Wire Format for DataResponseMarshaller (p. 1402))	1402
activemq::wireformat::openwire::marshal::v5::DataResponseMarshaller (Mar- shaling code for Open Wire Format for DataResponseMarshaller (p. 1406))	1406
activemq::wireformat::openwire::marshal::v4::DataResponseMarshaller (Mar- shaling code for Open Wire Format for DataResponseMarshaller (p. 1410))	1410
activemq::wireformat::openwire::marshal::v2::DataResponseMarshaller (Mar- shaling code for Open Wire Format for DataResponseMarshaller (p. 1414))	1414
activemq::wireformat::openwire::marshal::DataStreamMarshaller (Base class for all classes that marshal commands for Openwire)	1418
activemq::commands::DataStructure	1461
decaf::util::Date (Wrapper class around a time value in milliseconds)	1467
decaf::internal::DecafRuntime (Handles APR initialization and termination)	1472
activemq::threads::DedicatedTaskRunner	1473
activemq::transport::DefaultTransportListener	1475
decaf::util::concurrent::Delayed (A mix-in style interface for marking objects that should be acted upon after a given delay)	1477
cms::DeliveryMode (This is an Abstract class whose purpose is to provide a container for the delivery mode enumeration for CMS messages)	1478
cms::Destination (A Destination (p. 1480) object encapsulates a provider-specific ad- dress)	1480
activemq::commands::ActiveMQDestination::DestinationFilter	1483
activemq::commands::DestinationInfo	1484
activemq::wireformat::openwire::marshal::v2::DestinationInfoMarshaller (Marshaling code for Open Wire Format for DestinationInfoMarshaller (p. 1489))	1489
activemq::wireformat::openwire::marshal::v3::DestinationInfoMarshaller (Marshaling code for Open Wire Format for DestinationInfoMarshaller (p. 1493))	1493
activemq::wireformat::openwire::marshal::v4::DestinationInfoMarshaller (Marshaling code for Open Wire Format for DestinationInfoMarshaller (p. 1497))	1497

activemq::wireformat::openwire::marshal::v1::DestinationInfoMarshaller (Marshaling code for Open Wire Format for DestinationInfoMarshaller (p. 1501))	1501
activemq::wireformat::openwire::marshal::v5::DestinationInfoMarshaller (Marshaling code for Open Wire Format for DestinationInfoMarshaller (p. 1505))	1505
activemq::cmsutil::DestinationResolver (Resolves a CMS destination name to a Destination)	1509
activemq::commands::DiscoveryEvent	1511
activemq::wireformat::openwire::marshal::v2::DiscoveryEventMarshaller (Marshaling code for Open Wire Format for DiscoveryEventMarshaller (p. 1515))	1515
activemq::wireformat::openwire::marshal::v3::DiscoveryEventMarshaller (Marshaling code for Open Wire Format for DiscoveryEventMarshaller (p. 1519))	1519
activemq::wireformat::openwire::marshal::v4::DiscoveryEventMarshaller (Marshaling code for Open Wire Format for DiscoveryEventMarshaller (p. 1523))	1523
activemq::wireformat::openwire::marshal::v5::DiscoveryEventMarshaller (Marshaling code for Open Wire Format for DiscoveryEventMarshaller (p. 1527))	1527
activemq::wireformat::openwire::marshal::v1::DiscoveryEventMarshaller (Marshaling code for Open Wire Format for DiscoveryEventMarshaller (p. 1531))	1531
activemq::core::DispatchData (Simple POJO that contains the information neces- sary to route a message to a specified consumer)	1535
activemq::core::Dispatcher (Interface for an object responsible for dispatching mes- sages to consumers)	1536
decaf::lang::Double	1537
decaf::internal::nio::DoubleArrayBuffer	1548
decaf::nio::DoubleBuffer (This class defines four categories of operations upon double buffers:)	1556
decaf::lang::DYNAMIC_CAST_TOKEN	1567
activemq::cmsutil::DynamicDestinationResolver (Resolves a CMS destination name to a Destination)	1568
decaf::util::Map< K, V, COMPARATOR >::Entry	1570
decaf::io::EOFException	1571
decaf::lang::Exception	1574
cms::ExceptionListener (If a CMS provider detects a serious problem, it notifies the client application through an ExceptionListener (p. 1581) that is registered with the Connection (p. 1131))	1581
activemq::commands::ExceptionResponse	1582
activemq::wireformat::openwire::marshal::v2::ExceptionResponseMarshaller (Marshaling code for Open Wire Format for ExceptionResponseMarshaller (p. 1585))	1585
activemq::wireformat::openwire::marshal::v1::ExceptionResponseMarshaller (Marshaling code for Open Wire Format for ExceptionResponseMarshaller (p. 1589))	1589
activemq::wireformat::openwire::marshal::v3::ExceptionResponseMarshaller (Marshaling code for Open Wire Format for ExceptionResponseMarshaller (p. 1593))	1593
activemq::wireformat::openwire::marshal::v4::ExceptionResponseMarshaller (Marshaling code for Open Wire Format for ExceptionResponseMarshaller (p. 1597))	1597

activemq::wireformat::openwire::marshal::v5::ExceptionResponseMarshaller (Marshaling code for Open Wire Format for ExceptionResponseMarshaller (p. 1601))	1601
decaf::util::concurrent::ExecutionException	1605
decaf::util::concurrent::Executor (An object that executes submitted decaf.lang Runnable (p. 2816) tasks)	1608
decaf::util::concurrent::ExecutorService (An Executor (p. 1608) that provides methods to manage termination and methods that can produce a Future (p. 1701) for tracking progress of one or more asynchronous tasks)	1610
activemq::transport::failover::FailoverTransport	1612
activemq::transport::failover::FailoverTransportFactory (Creates an instance of a FailoverTransport (p. 1612))	1624
activemq::transport::failover::FailoverTransportListener (Utility class used by the Transport (p. 3273) to perform the work of responding to events from the active Transport (p. 3273))	1627
decaf::util::logging::Filter (A Filter (p. 1630) can be used to provide fine grain control over what is logged, beyond the control provided by log levels)	1630
decaf::io::FilterInputStream (A FilterInputStream (p. 1631) contains some other input stream, which it uses as its basic source of data, possibly transforming the data along the way or providing additional functionality)	1631
decaf::io::FilterOutputStream (This class is the superclass of all classes that filter output streams)	1640
decaf::lang::Float	1647
decaf::internal::nio::FloatArrayBuffer	1658
decaf::nio::FloatBuffer (This class defines four categories of operations upon float buffers:)	1665
activemq::commands::FlushCommand	1676
activemq::wireformat::openwire::marshal::v2::FlushCommandMarshaller (Marshaling code for Open Wire Format for FlushCommandMarshaller (p. 1679))	1679
activemq::wireformat::openwire::marshal::v1::FlushCommandMarshaller (Marshaling code for Open Wire Format for FlushCommandMarshaller (p. 1683))	1683
activemq::wireformat::openwire::marshal::v3::FlushCommandMarshaller (Marshaling code for Open Wire Format for FlushCommandMarshaller (p. 1687))	1687
activemq::wireformat::openwire::marshal::v4::FlushCommandMarshaller (Marshaling code for Open Wire Format for FlushCommandMarshaller (p. 1691))	1691
activemq::wireformat::openwire::marshal::v5::FlushCommandMarshaller (Marshaling code for Open Wire Format for FlushCommandMarshaller (p. 1695))	1695
decaf::util::logging::Formatter (A Formatter (p. 1699) provides support for formatting LogRecords)	1699
decaf::util::concurrent::Future< V > (A Future (p. 1701) represents the result of an asynchronous computation)	1701
activemq::transport::correlator::FutureResponse (A container that holds a response object)	1704
decaf::security::GeneralSecurityException	1706
decaf::util::logging::Handler (A Handler (p. 1709) object takes log messages from a Logger (p. 2028) and exports them)	1709
decaf::internal::util::HexStringParser	1713
activemq::wireformat::openwire::utils::HexTable (Maps hexadecimal strings to the value of an index into the table, i.e)	1715

decaf::net::HttpRetryException	1717
decaf::lang::exceptions::IllegalArgumentException	1720
decaf::lang::exceptions::IllegalMonitorStateException	1723
decaf::lang::exceptions::IllegalStateException	1726
cms::IllegalStateException (This exception is thrown when a method is invoked at an illegal or inappropriate time or if the provider is not in an appropriate state for the requested operation)	1729
decaf::lang::exceptions::IllegalThreadStateException	1730
activemq::transport::inactivity::InactivityMonitor	1733
decaf::lang::exceptions::IndexOutOfBoundsException	1737
decaf::io::InputStream (Base interface for an input stream)	1740
decaf::internal::nio::IntArrayBuffer	1744
decaf::nio::IntBuffer (This class defines four categories of operations upon int buffers:)	1751
decaf::lang::Integer	1762
activemq::commands::IntegerResponse	1777
activemq::wireformat::openwire::marshal::v2::IntegerResponseMarshaller (Marshaling code for Open Wire Format for IntegerResponseMarshaller (p. 1780))	1780
activemq::wireformat::openwire::marshal::v1::IntegerResponseMarshaller (Marshaling code for Open Wire Format for IntegerResponseMarshaller (p. 1784))	1784
activemq::wireformat::openwire::marshal::v3::IntegerResponseMarshaller (Marshaling code for Open Wire Format for IntegerResponseMarshaller (p. 1788))	1788
activemq::wireformat::openwire::marshal::v4::IntegerResponseMarshaller (Marshaling code for Open Wire Format for IntegerResponseMarshaller (p. 1792))	1792
activemq::wireformat::openwire::marshal::v5::IntegerResponseMarshaller (Marshaling code for Open Wire Format for IntegerResponseMarshaller (p. 1796))	1796
activemq::transport::mock::InternalCommandListener (Listens for Commands sent from the MockTransport (p. 2371))	1800
decaf::lang::exceptions::InterruptedException	1802
decaf::io::InterruptedException	1805
cms::InvalidClientIdException (This exception must be thrown when a client attempts to set a connection's client ID to a value that is rejected by a provider)	1808
cms::InvalidDestinationException (This exception must be thrown when a destination either is not understood by a provider or is no longer valid)	1809
decaf::security::InvalidKeyException	1810
decaf::nio::InvalidMarkException	1813
cms::InvalidSelectorException (This exception must be thrown when a CMS client attempts to give a provider a message selector with invalid syntax)	1816
decaf::lang::exceptions::InvalidStateException	1817
decaf::io::IOException	1820
activemq::transport::IOTransport (Implementation of the Transport (p. 3273) interface that performs marshaling of commands to IO streams)	1823
decaf::lang::Iterable< E > (Implementing this interface allows an object to be cast to an Iterable (p. 1830) type for generic collections API calls)	1830
decaf::util::Iterator< T > (Defines an object that can be used to iterate over the elements of a collection)	1832
activemq::commands::JournalQueueAck	1834

activemq::wireformat::openwire::marshal::v2::JournalQueueAckMarshaller (Marshaling code for Open Wire Format for JournalQueueAckMarshaller (p. 1838))	1838
activemq::wireformat::openwire::marshal::v4::JournalQueueAckMarshaller (Marshaling code for Open Wire Format for JournalQueueAckMarshaller (p. 1842))	1842
activemq::wireformat::openwire::marshal::v3::JournalQueueAckMarshaller (Marshaling code for Open Wire Format for JournalQueueAckMarshaller (p. 1846))	1846
activemq::wireformat::openwire::marshal::v1::JournalQueueAckMarshaller (Marshaling code for Open Wire Format for JournalQueueAckMarshaller (p. 1850))	1850
activemq::wireformat::openwire::marshal::v5::JournalQueueAckMarshaller (Marshaling code for Open Wire Format for JournalQueueAckMarshaller (p. 1854))	1854
activemq::commands::JournalTopicAck	1858
activemq::wireformat::openwire::marshal::v2::JournalTopicAckMarshaller (Marshaling code for Open Wire Format for JournalTopicAckMarshaller (p. 1863))	1863
activemq::wireformat::openwire::marshal::v1::JournalTopicAckMarshaller (Marshaling code for Open Wire Format for JournalTopicAckMarshaller (p. 1867))	1867
activemq::wireformat::openwire::marshal::v3::JournalTopicAckMarshaller (Marshaling code for Open Wire Format for JournalTopicAckMarshaller (p. 1871))	1871
activemq::wireformat::openwire::marshal::v4::JournalTopicAckMarshaller (Marshaling code for Open Wire Format for JournalTopicAckMarshaller (p. 1875))	1875
activemq::wireformat::openwire::marshal::v5::JournalTopicAckMarshaller (Marshaling code for Open Wire Format for JournalTopicAckMarshaller (p. 1879))	1879
activemq::commands::JournalTrace	1883
activemq::wireformat::openwire::marshal::v2::JournalTraceMarshaller (Mar- shaling code for Open Wire Format for JournalTraceMarshaller (p. 1886))	1886
activemq::wireformat::openwire::marshal::v4::JournalTraceMarshaller (Mar- shaling code for Open Wire Format for JournalTraceMarshaller (p. 1890))	1890
activemq::wireformat::openwire::marshal::v3::JournalTraceMarshaller (Mar- shaling code for Open Wire Format for JournalTraceMarshaller (p. 1894))	1894
activemq::wireformat::openwire::marshal::v1::JournalTraceMarshaller (Mar- shaling code for Open Wire Format for JournalTraceMarshaller (p. 1898))	1898
activemq::wireformat::openwire::marshal::v5::JournalTraceMarshaller (Mar- shaling code for Open Wire Format for JournalTraceMarshaller (p. 1902))	1902
activemq::commands::JournalTransaction	1906
activemq::wireformat::openwire::marshal::v2::JournalTransactionMarshaller (Marshaling code for Open Wire Format for JournalTransactionMarshaller (p. 1910))	1910
activemq::wireformat::openwire::marshal::v3::JournalTransactionMarshaller (Marshaling code for Open Wire Format for JournalTransactionMarshaller (p. 1914))	1914

activemq::wireformat::openwire::marshal::v4::JournalTransactionMarshaller (Marshaling code for Open Wire Format for JournalTransactionMarshaller (p. 1918))	1918
activemq::wireformat::openwire::marshal::v1::JournalTransactionMarshaller (Marshaling code for Open Wire Format for JournalTransactionMarshaller (p. 1922))	1922
activemq::wireformat::openwire::marshal::v5::JournalTransactionMarshaller (Marshaling code for Open Wire Format for JournalTransactionMarshaller (p. 1926))	1926
activemq::commands::KeepAliveInfo	1930
activemq::wireformat::openwire::marshal::v2::KeepAliveInfoMarshaller (Mar- shaling code for Open Wire Format for KeepAliveInfoMarshaller (p. 1933))	1933
activemq::wireformat::openwire::marshal::v5::KeepAliveInfoMarshaller (Mar- shaling code for Open Wire Format for KeepAliveInfoMarshaller (p. 1937))	1937
activemq::wireformat::openwire::marshal::v3::KeepAliveInfoMarshaller (Mar- shaling code for Open Wire Format for KeepAliveInfoMarshaller (p. 1941))	1941
activemq::wireformat::openwire::marshal::v4::KeepAliveInfoMarshaller (Mar- shaling code for Open Wire Format for KeepAliveInfoMarshaller (p. 1945))	1945
activemq::wireformat::openwire::marshal::v1::KeepAliveInfoMarshaller (Mar- shaling code for Open Wire Format for KeepAliveInfoMarshaller (p. 1949))	1949
decaf::security::Key (The Key (p. 1953) interface is the top-level interface for all keys)	1953
decaf::security::KeyException	1955
activemq::commands::LastPartialCommand	1958
activemq::wireformat::openwire::marshal::v2::LastPartialCommandMarshaller (Marshaling code for Open Wire Format for LastPartialCommandMar- shaller (p. 1961))	1961
activemq::wireformat::openwire::marshal::v1::LastPartialCommandMarshaller (Marshaling code for Open Wire Format for LastPartialCommandMar- shaller (p. 1965))	1965
activemq::wireformat::openwire::marshal::v3::LastPartialCommandMarshaller (Marshaling code for Open Wire Format for LastPartialCommandMar- shaller (p. 1969))	1969
activemq::wireformat::openwire::marshal::v4::LastPartialCommandMarshaller (Marshaling code for Open Wire Format for LastPartialCommandMar- shaller (p. 1973))	1973
activemq::wireformat::openwire::marshal::v5::LastPartialCommandMarshaller (Marshaling code for Open Wire Format for LastPartialCommandMar- shaller (p. 1977))	1977
decaf::util::comparators::Less< E > (Simple Less (p. 1981) Comparator (p. 1086) that compares to elements to determine if the first is less than the second) . .	1981
std::less< decaf::lang::Pointer< T > > (An override of the less function object so that the Pointer objects can be stored in STL Maps, etc)	1983
decaf::util::List< E > (An ordered collection (also known as a sequence))	1984
decaf::util::ListIterator< E > (An iterator for lists that allows the programmer to traverse the list in either direction, modify the list during iteration, and obtain the iterator's current position in the list)	1990
activemq::commands::LocalTransactionId	1993

activemq::wireformat::openwire::marshal::v2::LocalTransactionIdMarshaller (Marshaling code for Open Wire Format for LocalTransactionIdMarshaller (p. 1997))	1997
activemq::wireformat::openwire::marshal::v3::LocalTransactionIdMarshaller (Marshaling code for Open Wire Format for LocalTransactionIdMarshaller (p. 2001))	2001
activemq::wireformat::openwire::marshal::v4::LocalTransactionIdMarshaller (Marshaling code for Open Wire Format for LocalTransactionIdMarshaller (p. 2005))	2005
activemq::wireformat::openwire::marshal::v1::LocalTransactionIdMarshaller (Marshaling code for Open Wire Format for LocalTransactionIdMarshaller (p. 2009))	2009
activemq::wireformat::openwire::marshal::v5::LocalTransactionIdMarshaller (Marshaling code for Open Wire Format for LocalTransactionIdMarshaller (p. 2013))	2013
decaf::util::concurrent::locks::Lock (Lock (p. 2017) implementations provide more extensive locking operations than can be obtained using synchronized statements)	2017
decaf::util::concurrent::Lock (A wrapper class around a given synchronization mech- anism that provides automatic release upon destruction)	2023
decaf::util::concurrent::locks::LockSupport (Basic thread blocking primitives for creating locks and other synchronization classes)	2025
decaf::util::logging::Logger	2028
decaf::util::logging::LoggerHierarchy	2037
activemq::io::LoggingInputStream	2038
activemq::io::LoggingOutputStream (OutputStream filter that just logs the data being written)	2040
activemq::transport::logging::LoggingTransport (A transport filter that logs com- mands as they are sent/received)	2042
decaf::util::logging::LogManager (There is a single global LogManager (p. 2045) object that is used to maintain a set of shared state about Loggers and log services)	2045
decaf::util::logging::LogRecord	2050
decaf::util::logging::LogWriter	2055
decaf::lang::Long	2057
decaf::internal::nio::LongArrayBuffer	2071
decaf::nio::LongBuffer (This class defines four categories of operations upon long long buffers:)	2079
activemq::util::LongSequenceGenerator (This class is used to generate a sequence of long long values that are incremented each time a new value is requested) .	2090
decaf::net::MalformedURLException	2091
decaf::util::Map< K, V, COMPARATOR > (Map (p. 2094) template that wraps around a std::map to provide a more user-friendly interface and to provide com- mon functions that do not exist in std::map)	2094
cms::MapMessage (A MapMessage (p. 2106) object is used to send a set of name- value pairs)	2106
decaf::util::logging::MarkBlockLogger (Defines a class that can be used to mark the entry and exit from scoped blocks)	2117
activemq::wireformat::MarshalAware	2118
activemq::wireformat::openwire::marshal::v2::MarshallerFactory (Used to cre- ate marshallers for a specific version of the wire protocol)	2121
activemq::wireformat::openwire::marshal::v4::MarshallerFactory (Used to cre- ate marshallers for a specific version of the wire protocol)	2122
activemq::wireformat::openwire::marshal::v1::MarshallerFactory (Used to cre- ate marshallers for a specific version of the wire protocol)	2123

activemq::wireformat::openwire::marshal::v3::MarshallerFactory (Used to createmarshallers for a specific version of the wire protocol)	2124
activemq::wireformat::openwire::marshal::v5::MarshallerFactory (Used to createmarshallers for a specific version of the wire protocol)	2125
decaf::lang::Math (The class Math (p.2126) contains methods for performing basic numeric operations such as the elementary exponential, logarithm, square root, and trigonometric functions)	2126
activemq::util::MemoryUsage	2141
activemq::commands::Message	2145
cms::Message (Root of all messages)	2163
activemq::commands::MessageAck	2188
activemq::wireformat::openwire::marshal::v2::MessageAckMarshaller (Marshaling code for Open Wire Format for MessageAckMarshaller (p.2194))	2194
activemq::wireformat::openwire::marshal::v5::MessageAckMarshaller (Marshaling code for Open Wire Format for MessageAckMarshaller (p.2198))	2198
activemq::wireformat::openwire::marshal::v3::MessageAckMarshaller (Marshaling code for Open Wire Format for MessageAckMarshaller (p.2202))	2202
activemq::wireformat::openwire::marshal::v4::MessageAckMarshaller (Marshaling code for Open Wire Format for MessageAckMarshaller (p.2206))	2206
activemq::wireformat::openwire::marshal::v1::MessageAckMarshaller (Marshaling code for Open Wire Format for MessageAckMarshaller (p.2210))	2210
cms::MessageConsumer (A client uses a MessageConsumer (p.2214) to received messages from a destination)	2214
activemq::cmsutil::MessageCreator (Creates the user-defined message to be sent by the CmsTemplate (p.1041))	2218
activemq::commands::MessageDispatch	2219
activemq::core::MessageDispatchChannel	2224
activemq::wireformat::openwire::marshal::v2::MessageDispatchMarshaller (Marshaling code for Open Wire Format for MessageDispatchMarshaller (p.2231))	2231
activemq::wireformat::openwire::marshal::v4::MessageDispatchMarshaller (Marshaling code for Open Wire Format for MessageDispatchMarshaller (p.2235))	2235
activemq::wireformat::openwire::marshal::v3::MessageDispatchMarshaller (Marshaling code for Open Wire Format for MessageDispatchMarshaller (p.2239))	2239
activemq::wireformat::openwire::marshal::v1::MessageDispatchMarshaller (Marshaling code for Open Wire Format for MessageDispatchMarshaller (p.2243))	2243
activemq::wireformat::openwire::marshal::v5::MessageDispatchMarshaller (Marshaling code for Open Wire Format for MessageDispatchMarshaller (p.2247))	2247
activemq::commands::MessageDispatchNotification	2251
activemq::wireformat::openwire::marshal::v2::MessageDispatchNotificationMarshaller (Marshaling code for Open Wire Format for MessageDispatchNotificationMarshaller (p.2257))	2257
activemq::wireformat::openwire::marshal::v4::MessageDispatchNotificationMarshaller (Marshaling code for Open Wire Format for MessageDispatchNotificationMarshaller (p.2261))	2261

activemq::wireformat::openwire::marshal::v3::MessageDispatchNotificationMarshaller (Marshaling code for Open Wire Format for MessageDispatchNotificationMarshaller (p. 2265))	2265
activemq::wireformat::openwire::marshal::v1::MessageDispatchNotificationMarshaller (Marshaling code for Open Wire Format for MessageDispatchNotificationMarshaller (p. 2269))	2269
activemq::wireformat::openwire::marshal::v5::MessageDispatchNotificationMarshaller (Marshaling code for Open Wire Format for MessageDispatchNotificationMarshaller (p. 2273))	2273
cms::MessageEOFException (This exception must be thrown when an unexpected end of stream has been reached when a StreamMessage (p. 3081) or BytesMessage (p. 938) is being read)	2277
cms::MessageFormatException (This exception must be thrown when a CMS client attempts to use a data type not supported by a message or attempts to read data in a message as the wrong type)	2278
activemq::commands::MessageId	2279
activemq::wireformat::openwire::marshal::v2::MessageIdMarshaller (Marshaling code for Open Wire Format for MessageIdMarshaller (p. 2284))	2284
activemq::wireformat::openwire::marshal::v4::MessageIdMarshaller (Marshaling code for Open Wire Format for MessageIdMarshaller (p. 2288))	2288
activemq::wireformat::openwire::marshal::v3::MessageIdMarshaller (Marshaling code for Open Wire Format for MessageIdMarshaller (p. 2292))	2292
activemq::wireformat::openwire::marshal::v5::MessageIdMarshaller (Marshaling code for Open Wire Format for MessageIdMarshaller (p. 2296))	2296
activemq::wireformat::openwire::marshal::v1::MessageIdMarshaller (Marshaling code for Open Wire Format for MessageIdMarshaller (p. 2300))	2300
cms::MessageListener (A MessageListener (p. 2304) object is used to receive asynchronously delivered messages)	2304
activemq::wireformat::openwire::marshal::v2::MessageMarshaller (Marshaling code for Open Wire Format for MessageMarshaller (p. 2305))	2305
activemq::wireformat::openwire::marshal::v4::MessageMarshaller (Marshaling code for Open Wire Format for MessageMarshaller (p. 2310))	2310
activemq::wireformat::openwire::marshal::v3::MessageMarshaller (Marshaling code for Open Wire Format for MessageMarshaller (p. 2315))	2315
activemq::wireformat::openwire::marshal::v5::MessageMarshaller (Marshaling code for Open Wire Format for MessageMarshaller (p. 2320))	2320
activemq::wireformat::openwire::marshal::v1::MessageMarshaller (Marshaling code for Open Wire Format for MessageMarshaller (p. 2325))	2325
cms::MessageNotReadableException (This exception must be thrown when a CMS client attempts to read a write-only message)	2330
cms::MessageNotWriteableException (This exception must be thrown when a CMS client attempts to write to a read-only message)	2331
cms::MessageProducer (A client uses a MessageProducer (p. 2332) object to send messages to a Destination (p. 1480))	2332
activemq::wireformat::openwire::utils::MessagePropertyInterceptor (Used the base ActiveMQMessage class to intercept calls to get and set properties in order to capture the calls that use the reserved JMS properties and get and set them in the OpenWire Message properties)	2339
activemq::commands::MessagePull	2346
activemq::wireformat::openwire::marshal::v2::MessagePullMarshaller (Marshaling code for Open Wire Format for MessagePullMarshaller (p. 2351))	2351

activemq::wireformat::openwire::marshal::v3::MessagePullMarshaller (Marshaling code for Open Wire Format for MessagePullMarshaller (p. 2355))	2355
activemq::wireformat::openwire::marshal::v1::MessagePullMarshaller (Marshaling code for Open Wire Format for MessagePullMarshaller (p. 2359))	2359
activemq::wireformat::openwire::marshal::v5::MessagePullMarshaller (Marshaling code for Open Wire Format for MessagePullMarshaller (p. 2363))	2363
activemq::wireformat::openwire::marshal::v4::MessagePullMarshaller (Marshaling code for Open Wire Format for MessagePullMarshaller (p. 2367))	2367
activemq::transport::mock::MockTransport (The MockTransport (p. 2371) defines a base level Transport (p. 3273) class that is intended to be used in place of an a regular protocol Transport (p. 3273) such as TCP)	2371
activemq::transport::mock::MockTransportFactory (Manufactures MockTransports , which are objects that read from input streams and write to output streams)	2382
decaf::util::concurrent::Mutex (Mutex (p. 2385) object that offers recursive support on all platforms as well as providing the ability to use the standard wait / notify pattern used in languages like Java)	2385
decaf::util::concurrent::MutexHandle	2390
decaf::internal::util::concurrent::MutexImpl	2391
activemq::commands::NetworkBridgeFilter	2393
activemq::wireformat::openwire::marshal::v2::NetworkBridgeFilterMarshaller (Marshaling code for Open Wire Format for NetworkBridgeFilterMarshaller (p. 2397))	2397
activemq::wireformat::openwire::marshal::v3::NetworkBridgeFilterMarshaller (Marshaling code for Open Wire Format for NetworkBridgeFilterMarshaller (p. 2401))	2401
activemq::wireformat::openwire::marshal::v5::NetworkBridgeFilterMarshaller (Marshaling code for Open Wire Format for NetworkBridgeFilterMarshaller (p. 2405))	2405
activemq::wireformat::openwire::marshal::v1::NetworkBridgeFilterMarshaller (Marshaling code for Open Wire Format for NetworkBridgeFilterMarshaller (p. 2409))	2409
activemq::wireformat::openwire::marshal::v4::NetworkBridgeFilterMarshaller (Marshaling code for Open Wire Format for NetworkBridgeFilterMarshaller (p. 2413))	2413
decaf::net::NoRouteToHostException	2417
decaf::security::NoSuchAlgorithmException	2420
decaf::lang::exceptions::NoSuchElementException	2423
decaf::security::NoSuchProviderException	2426
decaf::lang::exceptions::NullPointerException	2429
decaf::lang::Number (The abstract class Number (p. 2432) is the superclass of classes Byte (p. 840), Double (p. 1537), Float (p. 1647), Integer (p. 1762), Long (p. 2057), and Short (p. 2906))	2432
decaf::lang::exceptions::NumberFormatException	2435
cms::ObjectMessage (Place holder for interaction with JMS systems that support Java, the C++ client is not responsible for deserializing the contained Object)	2438
decaf::security_provider::unix::openssl::OpenSSLX500Principal (The OpenSSLX500Principal (p. 2439) wraps around an OpenSSL X509_NAME structure)	2439
decaf::security_provider::unix::openssl::OpenSSLX509Certificate	2442

activemq::wireformat::openwire::OpenWireFormat	2448
activemq::wireformat::openwire::OpenWireFormatFactory	2460
activemq::wireformat::openwire::OpenWireFormatNegotiator	2462
activemq::wireformat::openwire::OpenWireResponseBuilder	2466
activemq::wireformat::openwire::utils::OpenwireStringSupport	2468
decaf::io::OutputStream (Base interface for an output stream)	2470
activemq::commands::PartialCommand	2473
activemq::wireformat::openwire::marshal::v2::PartialCommandMarshaller (Marshaling code for Open Wire Format for PartialCommandMarshaller (p. 2477))	2477
activemq::wireformat::openwire::marshal::v3::PartialCommandMarshaller (Marshaling code for Open Wire Format for PartialCommandMarshaller (p. 2481))	2481
activemq::wireformat::openwire::marshal::v4::PartialCommandMarshaller (Marshaling code for Open Wire Format for PartialCommandMarshaller (p. 2485))	2485
activemq::wireformat::openwire::marshal::v1::PartialCommandMarshaller (Marshaling code for Open Wire Format for PartialCommandMarshaller (p. 2489))	2489
activemq::wireformat::openwire::marshal::v5::PartialCommandMarshaller (Marshaling code for Open Wire Format for PartialCommandMarshaller (p. 2493))	2493
decaf::lang::Pointer< T, REFCOUNTER > (Decaf's implementation of a Smart Pointer (p. 2497) that is a template on a Type and is Thread Safe if the default Reference Counter is used)	2497
decaf::lang::PointerComparator< T, R > (This implementation of Comparator is designed to allows objects in a Collection to be sorted or tested for equality based on the value of the Object being Pointed to and not the value of the contained pointer in the Pointer (p. 2497) instance)	2504
activemq::cmsutil::PooledSession (A pooled session object that wraps around a del- egate session)	2505
decaf::util::concurrent::PooledThread	2518
decaf::util::concurrent::PooledThreadListener (Abstract Listener Interface for users of ThreadPool (p. 3175))	2520
decaf::net::PortUnreachableException	2522
activemq::util::PrimitiveList (List of primitives)	2525
activemq::util::PrimitiveMap (Map of named primitives)	2536
activemq::wireformat::openwire::marshal::PrimitiveTypesMarshaller (This class wraps the functionality needed to marshal a primitive map to the Openwire Format's expectation of what the map looks like on the wire)	2546
activemq::util::PrimitiveValueNode::PrimitiveValue (Define a union type com- prised of the various types)	2551
activemq::util::PrimitiveValueConverter (Class controls the conversion of data con- tained in a PrimitiveValueNode (p. 2555) from one type to another)	2553
activemq::util::PrimitiveValueNode (Class that wraps around a single value of one of the many types)	2555
decaf::security::Principal (Base interface for a principal, which can represent an indi- vidual or organization)	2569
decaf::util::PriorityQueue< E > (An unbounded priority queue based on a binary heap algorithm)	2571
activemq::commands::ProducerAck	2579
activemq::wireformat::openwire::marshal::v2::ProducerAckMarshaller (Mar- shaling code for Open Wire Format for ProducerAckMarshaller (p. 2583))	2583

activemq::wireformat::openwire::marshal::v3::ProducerAckMarshaller (Marshaling code for Open Wire Format for ProducerAckMarshaller (p. 2587))	2587
activemq::wireformat::openwire::marshal::v4::ProducerAckMarshaller (Marshaling code for Open Wire Format for ProducerAckMarshaller (p. 2591))	2591
activemq::wireformat::openwire::marshal::v5::ProducerAckMarshaller (Marshaling code for Open Wire Format for ProducerAckMarshaller (p. 2595))	2595
activemq::wireformat::openwire::marshal::v1::ProducerAckMarshaller (Marshaling code for Open Wire Format for ProducerAckMarshaller (p. 2599))	2599
activemq::cmsutil::ProducerCallback (Callback for sending a message to a CMS destination)	2603
activemq::cmsutil::CmsTemplate::ProducerExecutor	2604
activemq::commands::ProducerId	2606
activemq::wireformat::openwire::marshal::v2::ProducerIdMarshaller (Marshaling code for Open Wire Format for ProducerIdMarshaller (p. 2611))	2611
activemq::wireformat::openwire::marshal::v3::ProducerIdMarshaller (Marshaling code for Open Wire Format for ProducerIdMarshaller (p. 2615))	2615
activemq::wireformat::openwire::marshal::v5::ProducerIdMarshaller (Marshaling code for Open Wire Format for ProducerIdMarshaller (p. 2619))	2619
activemq::wireformat::openwire::marshal::v1::ProducerIdMarshaller (Marshaling code for Open Wire Format for ProducerIdMarshaller (p. 2623))	2623
activemq::wireformat::openwire::marshal::v4::ProducerIdMarshaller (Marshaling code for Open Wire Format for ProducerIdMarshaller (p. 2627))	2627
activemq::commands::ProducerInfo	2631
activemq::wireformat::openwire::marshal::v2::ProducerInfoMarshaller (Marshaling code for Open Wire Format for ProducerInfoMarshaller (p. 2636))	2636
activemq::wireformat::openwire::marshal::v5::ProducerInfoMarshaller (Marshaling code for Open Wire Format for ProducerInfoMarshaller (p. 2640))	2640
activemq::wireformat::openwire::marshal::v4::ProducerInfoMarshaller (Marshaling code for Open Wire Format for ProducerInfoMarshaller (p. 2644))	2644
activemq::wireformat::openwire::marshal::v1::ProducerInfoMarshaller (Marshaling code for Open Wire Format for ProducerInfoMarshaller (p. 2648))	2648
activemq::wireformat::openwire::marshal::v3::ProducerInfoMarshaller (Marshaling code for Open Wire Format for ProducerInfoMarshaller (p. 2652))	2652
activemq::state::ProducerState	2656
decaf::util::Properties (Java-like properties class for mapping string names to string values)	2657
decaf::util::logging::PropertiesChangeListener (Defines the interface that classes can use to listen for change events on Properties (p. 2657))	2666
decaf::net::ProtocolException	2667
decaf::security::PublicKey (A public key)	2670

decaf::util::Queue< E > (A kind of collection provides advanced operations than other basic collections, such as insertion, extraction, and inspection)	2671
cms::Queue (An interface encapsulating a provider-specific queue name)	2674
cms::QueueBrowser (This class implements in interface for browsing the messages in a Queue (p. 2674) without removing them)	2675
decaf::util::Random (Random (p. 2677) Value Generator which is used to generate a stream of pseudorandom numbers)	2677
activemq::transport::inactivity::ReadChecker (Runnable class that is used by the {)	2682
decaf::io::Reader	2683
decaf::nio::ReadOnlyBufferException	2685
decaf::util::concurrent::locks::ReadWriteLock (A ReadWriteLock (p. 2688) maintains a pair of associated locks, one for read-only operations and one for writing)	2688
activemq::cmsutil::CmsTemplate::ReceiveExecutor	2690
decaf::util::concurrent::locks::ReentrantLock (A reentrant mutual exclusion Lock (p. 2017) with extended capabilities)	2692
decaf::util::concurrent::RejectedExecutionException	2699
decaf::util::concurrent::RejectedExecutionHandler (A handler for tasks that cannot be executed by a ThreadPoolExecutor (p. ??))	2702
activemq::commands::RemoveInfo	2703
activemq::wireformat::openwire::marshal::v1::RemoveInfoMarshaller (Marshaling code for Open Wire Format for RemoveInfoMarshaller (p. 2707))	2707
activemq::wireformat::openwire::marshal::v2::RemoveInfoMarshaller (Marshaling code for Open Wire Format for RemoveInfoMarshaller (p. 2711))	2711
activemq::wireformat::openwire::marshal::v3::RemoveInfoMarshaller (Marshaling code for Open Wire Format for RemoveInfoMarshaller (p. 2715))	2715
activemq::wireformat::openwire::marshal::v4::RemoveInfoMarshaller (Marshaling code for Open Wire Format for RemoveInfoMarshaller (p. 2719))	2719
activemq::wireformat::openwire::marshal::v5::RemoveInfoMarshaller (Marshaling code for Open Wire Format for RemoveInfoMarshaller (p. 2723))	2723
activemq::commands::RemoveSubscriptionInfo	2727
activemq::wireformat::openwire::marshal::v5::RemoveSubscriptionInfoMarshaller (Marshaling code for Open Wire Format for RemoveSubscriptionInfoMarshaller (p. 2732))	2732
activemq::wireformat::openwire::marshal::v2::RemoveSubscriptionInfoMarshaller (Marshaling code for Open Wire Format for RemoveSubscriptionInfoMarshaller (p. 2736))	2736
activemq::wireformat::openwire::marshal::v1::RemoveSubscriptionInfoMarshaller (Marshaling code for Open Wire Format for RemoveSubscriptionInfoMarshaller (p. 2740))	2740
activemq::wireformat::openwire::marshal::v3::RemoveSubscriptionInfoMarshaller (Marshaling code for Open Wire Format for RemoveSubscriptionInfoMarshaller (p. 2744))	2744
activemq::wireformat::openwire::marshal::v4::RemoveSubscriptionInfoMarshaller (Marshaling code for Open Wire Format for RemoveSubscriptionInfoMarshaller (p. 2748))	2748
activemq::commands::ReplayCommand	2752

activemq::wireformat::openwire::marshal::v2::ReplayCommandMarshaller (Marshaling code for Open Wire Format for ReplayCommandMarshaller (p. 2756))	2756
activemq::wireformat::openwire::marshal::v3::ReplayCommandMarshaller (Marshaling code for Open Wire Format for ReplayCommandMarshaller (p. 2760))	2760
activemq::wireformat::openwire::marshal::v5::ReplayCommandMarshaller (Marshaling code for Open Wire Format for ReplayCommandMarshaller (p. 2764))	2764
activemq::wireformat::openwire::marshal::v4::ReplayCommandMarshaller (Marshaling code for Open Wire Format for ReplayCommandMarshaller (p. 2768))	2768
activemq::wireformat::openwire::marshal::v1::ReplayCommandMarshaller (Marshaling code for Open Wire Format for ReplayCommandMarshaller (p. 2772))	2772
activemq::cmsutil::CmsTemplate::ResolveProducerExecutor	2776
activemq::cmsutil::CmsTemplate::ResolveReceiveExecutor	2777
activemq::cmsutil::ResourceLifecycleManager (Manages the lifecycle of a set of CMS resources)	2778
activemq::commands::Response	2781
activemq::transport::mock::ResponseBuilder (Interface for all Protocols to imple- ment that defines the behavior of the Broker in response to messages of that protocol)	2785
activemq::transport::correlator::ResponseCorrelator (This type of transport filter is responsible for correlating asynchronous responses with requests)	2787
activemq::wireformat::openwire::marshal::v2::ResponseMarshaller (Marshaling code for Open Wire Format for ResponseMarshaller (p. 2791))	2791
activemq::wireformat::openwire::marshal::v3::ResponseMarshaller (Marshaling code for Open Wire Format for ResponseMarshaller (p. 2796))	2796
activemq::wireformat::openwire::marshal::v5::ResponseMarshaller (Marshaling code for Open Wire Format for ResponseMarshaller (p. 2801))	2801
activemq::wireformat::openwire::marshal::v1::ResponseMarshaller (Marshaling code for Open Wire Format for ResponseMarshaller (p. 2806))	2806
activemq::wireformat::openwire::marshal::v4::ResponseMarshaller (Marshaling code for Open Wire Format for ResponseMarshaller (p. 2811))	2811
decaf::lang::Runnable (Interface for a runnable object - defines a task that can be run by a thread)	2816
decaf::lang::Runtime	2817
decaf::lang::exceptions::RuntimeException	2819
decaf::security_provider::SecurityProvider	2822
decaf::security_provider::SecurityProviderMap (Lookup Map for Connector Fac- tories)	2823
decaf::security_provider::SecurityProviderRegistrar (Registers the passed in provider into the provider map, this class can manage the lifetime of the regis- tered provider (default behaviour))	2825
decaf::util::concurrent::Semaphore (A counting semaphore)	2827
activemq::cmsutil::CmsTemplate::SendExecutor	2836
decaf::net::ServerSocket (A server socket class (for testing purposes))	2837
cms::Session (A Session (p. 2839) object is a single-threaded context for producing and consuming messages)	2839
activemq::cmsutil::SessionCallback (Callback for executing any number of opera- tions on a provided CMS Session)	2852
activemq::commands::SessionId	2853

activemq::wireformat::openwire::marshal::v5::SessionIdMarshaller (Marshaling code for Open Wire Format for SessionIdMarshaller (p. 2857))	2857
activemq::wireformat::openwire::marshal::v1::SessionIdMarshaller (Marshaling code for Open Wire Format for SessionIdMarshaller (p. 2861))	2861
activemq::wireformat::openwire::marshal::v2::SessionIdMarshaller (Marshaling code for Open Wire Format for SessionIdMarshaller (p. 2865))	2865
activemq::wireformat::openwire::marshal::v3::SessionIdMarshaller (Marshaling code for Open Wire Format for SessionIdMarshaller (p. 2869))	2869
activemq::wireformat::openwire::marshal::v4::SessionIdMarshaller (Marshaling code for Open Wire Format for SessionIdMarshaller (p. 2873))	2873
activemq::commands::SessionInfo	2877
activemq::wireformat::openwire::marshal::v1::SessionInfoMarshaller (Marshaling code for Open Wire Format for SessionInfoMarshaller (p. 2881))	2881
activemq::wireformat::openwire::marshal::v4::SessionInfoMarshaller (Marshaling code for Open Wire Format for SessionInfoMarshaller (p. 2885))	2885
activemq::wireformat::openwire::marshal::v2::SessionInfoMarshaller (Marshaling code for Open Wire Format for SessionInfoMarshaller (p. 2889))	2889
activemq::wireformat::openwire::marshal::v5::SessionInfoMarshaller (Marshaling code for Open Wire Format for SessionInfoMarshaller (p. 2893))	2893
activemq::wireformat::openwire::marshal::v3::SessionInfoMarshaller (Marshaling code for Open Wire Format for SessionInfoMarshaller (p. 2897))	2897
activemq::cmsutil::SessionPool (A pool of CMS sessions from the same connection and with the same acknowledge mode)	2901
activemq::state::SessionState	2903
decaf::util::Set< E > (A collection that contains no duplicate elements)	2905
decaf::lang::Short	2906
decaf::internal::nio::ShortArrayBuffer	2915
decaf::nio::ShortBuffer (This class defines four categories of operations upon short buffers:)	2923
activemq::commands::ShutdownInfo	2934
activemq::wireformat::openwire::marshal::v1::ShutdownInfoMarshaller (Marshaling code for Open Wire Format for ShutdownInfoMarshaller (p. 2937))	2937
activemq::wireformat::openwire::marshal::v4::ShutdownInfoMarshaller (Marshaling code for Open Wire Format for ShutdownInfoMarshaller (p. 2941))	2941
activemq::wireformat::openwire::marshal::v3::ShutdownInfoMarshaller (Marshaling code for Open Wire Format for ShutdownInfoMarshaller (p. 2945))	2945
activemq::wireformat::openwire::marshal::v2::ShutdownInfoMarshaller (Marshaling code for Open Wire Format for ShutdownInfoMarshaller (p. 2949))	2949
activemq::wireformat::openwire::marshal::v5::ShutdownInfoMarshaller (Marshaling code for Open Wire Format for ShutdownInfoMarshaller (p. 2953))	2953
decaf::security::SignatureException	2957
decaf::util::logging::SimpleFormatter (Print a brief summary of the LogRecord (p. 2050) in a human readable format)	2960
decaf::util::logging::SimpleLogger	2962
decaf::net::Socket	2964
decaf::net::SocketError (Static utility class to simplify handling of error codes for socket operations)	2971
decaf::net::SocketException (Exception for errors when manipulating sockets)	2972

decaf::net::SocketFactory (Socket (p. 2964) Factory implementation for use in Creating Sockets)	2975
decaf::net::SocketInputStream (Input stream for performing reads on a socket) . .	2977
decaf::net::SocketOutputStream (Output stream for performing write operations on a socket)	2984
decaf::net::SocketTimeoutException	2990
activemq::commands::BrokerError::StackTraceElement	2993
decaf::internal::io::StandardErrorOutputStream (Wrapper Around the Standard error Output facility on the current platform)	2994
decaf::internal::io::StandardInputStream	3000
decaf::internal::io::StandardOutputStream	3008
cms::Startable (Interface for a class that implements the start method)	3014
decaf::lang::STATIC_CAST_TOKEN	3015
activemq::core::ActiveMQConstants::StaticInitializer	3016
decaf::util::StlList< E > (List (p. 1984) class that wraps the STL list object to provide a simpler interface and additional methods not provided by the STL type) . .	3017
decaf::util::StlMap< K, V, COMPARATOR > (Map (p. 2094) template that wraps around a std::map to provide a more user-friendly interface and to provide common functions that do not exist in std::map)	3030
decaf::util::StlQueue< T > (The Queue (p. 2671) class accepts messages with an psuh(m) command where m is the message to be queued)	3043
decaf::util::StlSet< E > (Set (p. 2905) template that wraps around a std::set to provide a more user-friendly interface and to provide common functions that do not exist in std::set)	3051
activemq::wireformat::stomp::StompCommandConstants	3057
activemq::wireformat::stomp::StompFrame (A Stomp-level message frame that encloses all messages to and from the broker)	3061
activemq::wireformat::stomp::StompHelper (Utility Methods used when marshaling to and from StompFrame's)	3066
activemq::wireformat::stomp::StompWireFormat	3071
activemq::wireformat::stomp::StompWireFormatFactory (Factory used to create the Stomp Wire Format instance)	3075
cms::Stoppable (Interface for a class that implements the stop method)	3076
decaf::util::logging::StreamHandler	3077
cms::StreamMessage (Interface for a StreamMessage (p. 3081))	3081
decaf::util::StringTokenizer	3094
activemq::commands::SubscriptionInfo	3097
activemq::wireformat::openwire::marshal::v1::SubscriptionInfoMarshaller (Marshaling code for Open Wire Format for SubscriptionInfoMarshaller (p. 3102))	3102
activemq::wireformat::openwire::marshal::v4::SubscriptionInfoMarshaller (Marshaling code for Open Wire Format for SubscriptionInfoMarshaller (p. 3106))	3106
activemq::wireformat::openwire::marshal::v3::SubscriptionInfoMarshaller (Marshaling code for Open Wire Format for SubscriptionInfoMarshaller (p. 3110))	3110
activemq::wireformat::openwire::marshal::v5::SubscriptionInfoMarshaller (Marshaling code for Open Wire Format for SubscriptionInfoMarshaller (p. 3114))	3114
activemq::wireformat::openwire::marshal::v2::SubscriptionInfoMarshaller (Marshaling code for Open Wire Format for SubscriptionInfoMarshaller (p. 3118))	3118
decaf::util::concurrent::Synchronizable (The interface for all synchronizable objects (that is, objects that can be locked and unlocked))	3122

decaf::internal::util::concurrent::SynchronizableImpl (A convenience class used by some Decaf classes to implement the Synchronizable interface when there is no issues related to multiple inheritance)	3133
activemq::core::Synchronization (Transacted Object Synchronization (p. 3137), used to sync the events of a Transaction with the items in the Transaction)	3137
decaf::util::concurrent::SynchronousQueue< E > (A BlockingQueue blocking queue} in which each insert operation must wait for a corresponding remove operation by another thread, and vice versa)	3138
decaf::lang::System	3145
activemq::threads::Task (Represents a unit of work that requires one or more iterations to complete)	3148
decaf::util::concurrent::TaskListener	3149
activemq::threads::TaskRunner	3150
decaf::net::TcpSocket (Platform-independent implementation of the socket interface)	3152
activemq::transport::tcp::TcpTransport (Implements a TCP/IP based transport filter, this transport is meant to wrap an instance of an IOTransport (p. 1823))	3160
activemq::transport::tcp::TcpTransportFactory (Factory Responsible for creating the TcpTransport (p. 3160))	3163
cms::TemporaryQueue (Defines a Temporary Queue (p. 2674) based Destination (p. 1480))	3166
cms::TemporaryTopic (Defines a Temporary Topic (p. 3215) based Destination (p. 1480))	3168
cms::TextMessage (Interface for a text message)	3170
decaf::util::concurrent::ThreadFactory (Public interface ThreadFactory (p. 3172))	3172
decaf::lang::ThreadGroup	3174
decaf::util::concurrent::ThreadPool (Defines a Thread Pool object that implements the functionality of pooling threads to perform user tasks)	3175
decaf::lang::Throwable (This class represents an error that has occurred)	3181
decaf::util::concurrent::TimeoutException	3185
decaf::util::Timer (A facility for threads to schedule tasks for future execution in a background thread)	3188
decaf::util::TimerTask (A Base class for a task object that can be scheduled for one-time or repeated execution by a Timer (p. 3188))	3199
decaf::internal::util::TimerTaskHeap (A Binary Heap implemented specifically for the Timer class in Decaf Util)	3202
decaf::util::concurrent::TimeUnit (A TimeUnit (p. 3205) represents time durations at a given unit of granularity and provides utility methods to convert across units, and to perform timing and delay operations in these units)	3205
cms::Topic (An interface encapsulating a provider-specific topic name)	3215
activemq::state::Tracked	3216
activemq::commands::TransactionId	3217
activemq::wireformat::openwire::marshal::v1::TransactionIdMarshaller (Marshaling code for Open Wire Format for TransactionIdMarshaller (p. 3220))	3220
activemq::wireformat::openwire::marshal::v2::TransactionIdMarshaller (Marshaling code for Open Wire Format for TransactionIdMarshaller (p. 3224))	3224
activemq::wireformat::openwire::marshal::v4::TransactionIdMarshaller (Marshaling code for Open Wire Format for TransactionIdMarshaller (p. 3228))	3228

activemq::wireformat::openwire::marshal::v5::TransactionIdMarshaller (Marshaling code for Open Wire Format for TransactionIdMarshaller (p. 3232))	3232
activemq::wireformat::openwire::marshal::v3::TransactionIdMarshaller (Marshaling code for Open Wire Format for TransactionIdMarshaller (p. 3236))	3236
activemq::commands::TransactionInfo	3240
activemq::wireformat::openwire::marshal::v1::TransactionInfoMarshaller (Marshaling code for Open Wire Format for TransactionInfoMarshaller (p. 3245))	3245
activemq::wireformat::openwire::marshal::v4::TransactionInfoMarshaller (Marshaling code for Open Wire Format for TransactionInfoMarshaller (p. 3249))	3249
activemq::wireformat::openwire::marshal::v3::TransactionInfoMarshaller (Marshaling code for Open Wire Format for TransactionInfoMarshaller (p. 3253))	3253
activemq::wireformat::openwire::marshal::v5::TransactionInfoMarshaller (Marshaling code for Open Wire Format for TransactionInfoMarshaller (p. 3257))	3257
activemq::wireformat::openwire::marshal::v2::TransactionInfoMarshaller (Marshaling code for Open Wire Format for TransactionInfoMarshaller (p. 3261))	3261
activemq::state::TransactionState	3265
decaf::internal::util::concurrent::Transferer< E > (Shared internal API for dual stacks and queues)	3267
decaf::internal::util::concurrent::TransferQueue< E > (This extends Scherer-Scott dual queue algorithm, differing, among other ways, by using modes within nodes rather than marked pointers)	3268
decaf::internal::util::concurrent::TransferStack< E >	3271
activemq::transport::Transport (Interface for a transport layer for command objects)	3273
activemq::transport::TransportFactory (Defines the interface for Factories that create Transports or TransportFilters)	3279
activemq::transport::TransportFilter (A filter on the transport layer)	3281
activemq::transport::TransportListener (A listener of asynchronous exceptions from a command transport object)	3289
activemq::transport::TransportRegistry (Registry of all Transport (p. 3273) Factories that are available to the client at runtime)	3291
decaf::net::UnknownHostException	3294
decaf::net::UnknownServiceException	3297
decaf::io::UnsupportedEncodingException (Thrown when the the Character Encoding is not supported)	3300
decaf::lang::exceptions::UnsupportedOperationException	3303
cms::UnsupportedOperationException (This exception must be thrown when a CMS client attempts use a CMS method that is not implemented or not supported by the CMS Provider in use)	3306
decaf::net::URI (This class represents an instance of a URI (p. 3308) as defined by RFC 2396)	3308
decaf::internal::net::URIEncoderDecoder	3319
decaf::internal::net::URIHelper (Helper class used by the URI classes in encoding and decoding of URI's)	3322
activemq::transport::failover::URIPool	3329
activemq::util::URISupport	3332
decaf::net::URISyntaxException	3335

decaf::internal::net::URIType (Basic type object that holds data that composes a given URI)	3339
decaf::net::URL (Class URL (p. 3347) represents a Uniform Resource Locator, a pointer to a "resource" on the World Wide Web)	3347
decaf::net::URLDecoder	3349
decaf::net::URLEncoder	3350
activemq::util::Usage	3351
decaf::io::UTFDataFormatException (Thrown from classes that attempt to read or write a UTF-8 encoded string and an encoding error is encountered)	3353
decaf::util::UUID (A class that represents an immutable universally unique identifier (UUID (p. 3356)))	3356
activemq::wireformat::WireFormat (Provides a mechanism to marshal commands into and out of packets or into and out of streams, Channels and Datagrams) .	3363
activemq::wireformat::WireFormatFactory (The WireFormatFactory (p. 3367) is the interface that all WireFormatFactory (p. 3367) classes must extend) .	3367
activemq::commands::WireFormatInfo	3369
activemq::wireformat::openwire::marshal::v3::WireFormatInfoMarshaller (Marshaling code for Open Wire Format for WireFormatInfoMarshaller (p. 3379))	3379
activemq::wireformat::openwire::marshal::v5::WireFormatInfoMarshaller (Marshaling code for Open Wire Format for WireFormatInfoMarshaller (p. 3383))	3383
activemq::wireformat::openwire::marshal::v2::WireFormatInfoMarshaller (Marshaling code for Open Wire Format for WireFormatInfoMarshaller (p. 3387))	3387
activemq::wireformat::openwire::marshal::v4::WireFormatInfoMarshaller (Marshaling code for Open Wire Format for WireFormatInfoMarshaller (p. 3391))	3391
activemq::wireformat::openwire::marshal::v1::WireFormatInfoMarshaller (Marshaling code for Open Wire Format for WireFormatInfoMarshaller (p. 3395))	3395
activemq::wireformat::WireFormatNegotiator (Defines a WireFormatNegotiator (p. 3399) which allows a WireFormat (p. 3363) to)	3399
activemq::wireformat::WireFormatRegistry (Registry of all WireFormat (p. 3363) Factories that are available to the client at runtime)	3400
activemq::transport::inactivity::WriteChecker (Runnable class used by the { }) .	3403
decaf::io::Writer	3404
decaf::security::auth::x500::X500Principal	3406
decaf::security::cert::X509Certificate (Base interface for all identity certificates) .	3407
activemq::commands::XATransactionId	3410
activemq::wireformat::openwire::marshal::v3::XATransactionIdMarshaller (Marshaling code for Open Wire Format for XATransactionIdMarshaller (p. 3415))	3415
activemq::wireformat::openwire::marshal::v1::XATransactionIdMarshaller (Marshaling code for Open Wire Format for XATransactionIdMarshaller (p. 3419))	3419
activemq::wireformat::openwire::marshal::v4::XATransactionIdMarshaller (Marshaling code for Open Wire Format for XATransactionIdMarshaller (p. 3423))	3423
activemq::wireformat::openwire::marshal::v2::XATransactionIdMarshaller (Marshaling code for Open Wire Format for XATransactionIdMarshaller (p. 3427))	3427

activemq::wireformat::openwire::marshal::v5::XATransactionIdMarshaller	
(Marshaling code for Open Wire Format for XATransactionIdMarshaller	
(p. 3431)	3431

Chapter 4

File Index

4.1 File List

Here is a list of all files with brief descriptions:

src/main/activemq/cmsutil/	CachedConsumer.h	3435
src/main/activemq/cmsutil/	CachedProducer.h	3436
src/main/activemq/cmsutil/	CmsAccessor.h	3437
src/main/activemq/cmsutil/	CmsDestinationAccessor.h	3438
src/main/activemq/cmsutil/	CmsTemplate.h	3439
src/main/activemq/cmsutil/	DestinationResolver.h	3440
src/main/activemq/cmsutil/	DynamicDestinationResolver.h	3441
src/main/activemq/cmsutil/	MessageCreator.h	3442
src/main/activemq/cmsutil/	PooledSession.h	3443
src/main/activemq/cmsutil/	ProducerCallback.h	3444
src/main/activemq/cmsutil/	ResourceLifecycleManager.h	3445
src/main/activemq/cmsutil/	SessionCallback.h	3446
src/main/activemq/cmsutil/	SessionPool.h	3447
src/main/activemq/commands/	ActiveMQBlobMessage.h	3448
src/main/activemq/commands/	ActiveMQBytesMessage.h	3449
src/main/activemq/commands/	ActiveMQDestination.h	3450

5.2 activemq::cmsutil Namespace Reference

Data Structures

- class **CachedConsumer**
A cached message consumer contained within a pooled session.
- class **CachedProducer**
A cached message producer contained within a pooled session.
- class **CmsAccessor**
Base class for `activemq.cmsutil.CmsTemplate` (p. 1041) and other CMS-accessing gateway helpers, defining common properties such as the CMS `cms.ConnectionFactory` (p. 1184) to operate on.
- class **CmsDestinationAccessor**
Extends the `CmsAccessor` (p. 1024) to add support for resolving destination names.
- class **CmsTemplate**
`CmsTemplate` (p. 1041) simplifies performing synchronous CMS operations.
- class **DestinationResolver**
Resolves a CMS destination name to a `Destination`.
- class **DynamicDestinationResolver**
Resolves a CMS destination name to a `Destination`.
- class **MessageCreator**
Creates the user-defined message to be sent by the `CmsTemplate` (p. 1041).
- class **PooledSession**
A pooled session object that wraps around a delegate session.
- class **ProducerCallback**
Callback for sending a message to a CMS destination.
- class **ResourceLifecycleManager**
Manages the lifecycle of a set of CMS resources.
- class **SessionCallback**
Callback for executing any number of operations on a provided CMS Session.
- class **SessionPool**
A pool of CMS sessions from the same connection and with the same acknowledge mode.

5.3 activemq::commands Namespace Reference

Data Structures

- class **ActiveMQBlobMessage**
- class **ActiveMQBytesMessage**
- class **ActiveMQDestination**
- class **ActiveMQMapMessage**
- class **ActiveMQMessage**
- class **ActiveMQMessageTemplate**
- class **ActiveMQObjectMessage**
- class **ActiveMQQueue**
- class **ActiveMQStreamMessage**
- class **ActiveMQTempDestination**
- class **ActiveMQTempQueue**
- class **ActiveMQTempTopic**
- class **ActiveMQTextMessage**
- class **ActiveMQTopic**
- class **BaseCommand**
- class **BaseDataStructure**
- class **BooleanExpression**
- class **BrokerError**

This class represents an Exception sent from the Broker.

- class **BrokerId**
- class **BrokerInfo**
- class **Command**
- class **ConnectionControl**
- class **ConnectionError**
- class **ConnectionId**
- class **ConnectionInfo**
- class **ConsumerControl**
- class **ConsumerId**
- class **ConsumerInfo**
- class **ControlCommand**
- class **DataArrayResponse**
- class **DataResponse**
- class **DataStructure**
- class **DestinationInfo**
- class **DiscoveryEvent**
- class **ExceptionResponse**
- class **FlushCommand**
- class **IntegerResponse**
- class **JournalQueueAck**
- class **JournalTopicAck**
- class **JournalTrace**
- class **JournalTransaction**
- class **KeepAliveInfo**
- class **LastPartialCommand**
- class **LocalTransactionId**

- class **Message**
- class **MessageAck**
- class **MessageDispatch**
- class **MessageDispatchNotification**
- class **MessageId**
- class **MessagePull**
- class **NetworkBridgeFilter**
- class **PartialCommand**
- class **ProducerAck**
- class **ProducerId**
- class **ProducerInfo**
- class **RemoveInfo**
- class **RemoveSubscriptionInfo**
- class **ReplayCommand**
- class **Response**
- class **SessionId**
- class **SessionInfo**
- class **ShutdownInfo**
- class **SubscriptionInfo**
- class **TransactionId**
- class **TransactionInfo**
- class **WireFormatInfo**
- class **XATransactionId**

5.4 activemq::core Namespace Reference

Data Structures

- class **ActiveMQAckHandler**

Interface class that is used to give CMS Messages an interface to Ack themselves with.

- class **ActiveMQConnection**

Concrete connection used for all connectors to the ActiveMQ broker.

- class **ActiveMQConnectionFactory**

- class **ActiveMQConnectionMetaData**

*This class houses all the various settings and information that is used by an instance of an **ActiveMQConnection** (p. 233) class.*

- class **ActiveMQConnectionSupport**

- class **ActiveMQConstants**

Class holding constant values for various ActiveMQ specific things Each constant is defined as an enumeration and has functions that convert back an forth between string and enum values.

- class **ActiveMQConsumer**

- class **ActiveMQProducer**

- class **ActiveMQSession**

- class **ActiveMQSessionExecutor**

Delegate dispatcher for a single session.

- class **ActiveMQTransactionContext**

Transaction Management class, hold messages that are to be redelivered upon a request to roll-back.

- class **DispatchData**

Simple POJO that contains the information necessary to route a message to a specified consumer.

- class **Dispatcher**

Interface for an object responsible for dispatching messages to consumers.

- class **MessageDispatchChannel**

- class **Synchronization**

*Transacted Object **Synchronization** (p. 3137), used to sync the events of a Transaction with the items in the Transaction.*

5.5 activemq::exceptions Namespace Reference

Data Structures

- class **ActiveMQException**
- class **BrokerException**

5.6 activemq::io Namespace Reference

Data Structures

- class **LoggingInputStream**
- class **LoggingOutputStream**

OutputStream filter that just logs the data being written.

5.7 activemq::library Namespace Reference

Data Structures

- class `ActiveMQCPP`

5.8 activemq::state Namespace Reference

Data Structures

- class **CommandVisitor**

Interface for an Object that can visit the various Command Objects that are sent from and to this client.

- class **CommandVisitorAdapter**

*Default Implementation of a **CommandVisitor** (p. 1069) that returns NULL for all calls.*

- class **ConnectionState**
- class **ConnectionStateTracker**
- class **ConsumerState**
- class **ProducerState**
- class **SessionState**
- class **Tracked**
- class **TransactionState**

5.9 activemq::threads Namespace Reference

Data Structures

- class **CompositeTask**

Represents a single task that can be part of a set of Tasks that are contained in a `CompositeTaskRunner` (p. 1092).

- class **CompositeTaskRunner**

A `Task` (p. 3148) Runner that can contain one or more `CompositeTasks` that are each checked for pending work and run if any is present in the order that the tasks were added.

- class **DedicatedTaskRunner**

- class **Task**

Represents a unit of work that requires one or more iterations to complete.

- class **TaskRunner**

5.10 activemq::transport Namespace Reference

Namespaces

- namespace **correlator**
- namespace **failover**
- namespace **inactivity**
- namespace **logging**
- namespace **mock**
- namespace **tcp**

Data Structures

- class **AbstractTransportFactory**
*Abstract implementation of the **TransportFactory** (p. 3279) interface, providing the base functionality that's common to most of the **TransportFactory** (p. 3279) instances.*
- class **CompositeTransport**
*A Composite **Transport** (p. 3273) is a **Transport** (p. 3273) implementation that is composed of several **Transports**.*
- class **DefaultTransportListener**
- class **IOTransport**
*Implementation of the **Transport** (p. 3273) interface that performs marshaling of commands to IO streams.*
- class **Transport**
Interface for a transport layer for command objects.
- class **TransportFactory**
*Defines the interface for Factories that create **Transports** or **TransportFilters**.*
- class **TransportFilter**
A filter on the transport layer.
- class **TransportListener**
A listener of asynchronous exceptions from a command transport object.
- class **TransportRegistry**
*Registry of all **Transport** (p. 3273) Factories that are available to the client at runtime.*

5.11 activemq::transport::correlator Namespace Reference

Data Structures

- class **FutureResponse**

A container that holds a response object.

- class **ResponseCorrelator**

This type of transport filter is responsible for correlating asynchronous responses with requests.

5.12 activemq::transport::failover Namespace Reference

Data Structures

- class **BackupTransport**
- class **BackupTransportPool**
- class **CloseTransportsTask**
- class **FailoverTransport**
- class **FailoverTransportFactory**

*Creates an instance of a **FailoverTransport** (p. 1612).*

- class **FailoverTransportListener**

*Utility class used by the **Transport** (p. 3273) to perform the work of responding to events from the active **Transport** (p. 3273).*

- class **URIPool**

5.13 activemq::transport::inactivity Namespace Reference

Data Structures

- class **InactivityMonitor**
- class **ReadChecker**
Runnable class that is used by the {}.
- class **WriteChecker**
Runnable class used by the {}.

5.14 activemq::transport::logging Namespace Reference

Data Structures

- class **LoggingTransport**

A transport filter that logs commands as they are sent/received.

5.15 activemq::transport::mock Namespace Reference

Data Structures

- class **InternalCommandListener**

*Listens for Commands sent from the **MockTransport** (p. 2371).*

- class **MockTransport**

*The **MockTransport** (p. 2371) defines a base level **Transport** (p. 3273) class that is intended to be used in place of an a regular protocol **Transport** (p. 3273) such as TCP.*

- class **MockTransportFactory**

Manufactures MockTransports, which are objects that read from input streams and write to output streams.

- class **ResponseBuilder**

Interface for all Protocols to implement that defines the behavior of the Broker in response to messages of that protocol.

5.16 activemq::transport::tcp Namespace Reference

Data Structures

- class **TcpTransport**

*Implements a TCP/IP based transport filter, this transport is meant to wrap an instance of an **IOTransport** (p. 1823).*

- class **TcpTransportFactory**

*Factory Responsible for creating the **TcpTransport** (p. 3160).*

5.17 activemq::util Namespace Reference

Data Structures

- class **ActiveMQProperties**

Implementation of the `CMSProperties` interface that delegates to a `decaf::util::Properties` (p. 2657) object.

- class **CMSExceptionSupport**
- class **CompositeData**

Represents a Composite URI.

- class **LongSequenceGenerator**

This class is used to generate a sequence of long long values that are incremented each time a new value is requested.

- class **MemoryUsage**
- class **PrimitiveList**

List of primitives.

- class **PrimitiveMap**

Map of named primitives.

- class **PrimitiveValueConverter**

Class controls the conversion of data contained in a `PrimitiveValueNode` (p. 2555) from one type to another.

- class **PrimitiveValueNode**

Class that wraps around a single value of one of the many types.

- class **URISupport**
- class **Usage**

5.18 activemq::wireformat Namespace Reference

Namespaces

- namespace **openwire**
- namespace **stomp**

Data Structures

- class **MarshalAware**
- class **WireFormat**
Provides a mechanism to marshal commands into and out of packets or into and out of streams, Channels and Datagrams.
- class **WireFormatFactory**
*The **WireFormatFactory** (p. 3367) is the interface that all **WireFormatFactory** (p. 3367) classes must extend.*
- class **WireFormatNegotiator**
*Defines a **WireFormatNegotiator** (p. 3399) which allows a **WireFormat** (p. 3363) to.*
- class **WireFormatRegistry**
*Registry of all **WireFormat** (p. 3363) Factories that are available to the client at runtime.*

5.19 activemq::wireformat::openwire Namespace Reference

Namespaces

- namespace **marshal**
- namespace **utils**

Data Structures

- class **OpenWireFormat**
- class **OpenWireFormatFactory**
- class **OpenWireFormatNegotiator**
- class **OpenWireResponseBuilder**

5.20 activemq::wireformat::openwire::marshal Namespace Reference

Namespaces

- namespace **v1**
- namespace **v2**
- namespace **v3**
- namespace **v4**
- namespace **v5**

Data Structures

- class **BaseDataStreamMarshaller**
Base class for all Marshallers that marshal DataStructures to and from the wire using the OpenWire protocol.
- class **DataStreamMarshaller**
Base class for all classes that marshal commands for Openwire.
- class **PrimitiveTypesMarshaller**
This class wraps the functionality needed to marshal a primitive map to the Openwire Format's expectation of what the map looks like on the wire.

5.21 `activemq::wireformat::openwire::marshal::v1` Namespace Reference

Data Structures

- class **ActiveMQBlobMessageMarshaller**
Marshaling code for Open Wire Format for `ActiveMQBlobMessageMarshaller` (p. 181).
- class **ActiveMQBytesMessageMarshaller**
Marshaling code for Open Wire Format for `ActiveMQBytesMessageMarshaller` (p. 217).
- class **ActiveMQDestinationMarshaller**
Marshaling code for Open Wire Format for `ActiveMQDestinationMarshaller` (p. 289).
- class **ActiveMQMapMessageMarshaller**
Marshaling code for Open Wire Format for `ActiveMQMapMessageMarshaller` (p. 326).
- class **ActiveMQMessageMarshaller**
Marshaling code for Open Wire Format for `ActiveMQMessageMarshaller` (p. 349).
- class **ActiveMQObjectMessageMarshaller**
Marshaling code for Open Wire Format for `ActiveMQObjectMessageMarshaller` (p. 390).
- class **ActiveMQQueueMarshaller**
Marshaling code for Open Wire Format for `ActiveMQQueueMarshaller` (p. 427).
- class **ActiveMQStreamMessageMarshaller**

5.26 activemq::wireformat::openwire::utils Namespace Reference

Data Structures

- class **BooleanStream**

Manages the writing and reading of boolean data streams to and from a data source such as a `DataInputStream` or `DataOutputStream`.

- class **HexTable**

*The **HexTable** (p. 1715) class maps hexadecimal strings to the value of an index into the table, i.e.*

- class **MessagePropertyInterceptor**

Used the base `ActiveMQMessage` class to intercept calls to get and set properties in order to capture the calls that use the reserved JMS properties and get and set them in the `OpenWireMessage` properties.

- class **OpenwireStringSupport**

5.27 activemq::wireformat::stomp Namespace Reference

Data Structures

- class **StompCommandConstants**
- class **StompFrame**

A Stomp-level message frame that encloses all messages to and from the broker.

- class **StompHelper**

Utility Methods used when marshaling to and from StompFrame's.

- class **StompWireFormat**
- class **StompWireFormatFactory**

Factory used to create the Stomp Wire Format instance.

5.28 cms Namespace Reference

Licensed to the Apache Software Foundation (ASF) under one or more contributor license agreements.

Data Structures

- class **BytesMessage**

*A **BytesMessage** (p. 938) object is used to send a message containing a stream of unsigned bytes.*

- class **Closeable**

Interface for a class that implements the close method.

- class **CMSException**

CMS API Exception that is the base for all exceptions thrown from CMS classes.

- class **CMSProperties**

Interface for a Java-like properties object.

- class **CMSSecurityException**

This exception must be thrown when a provider rejects a user name/password submitted by a client.

- class **Connection**

The client's connection to its provider.

- class **ConnectionFactory**

*Defines the interface for a factory that creates connection objects, the **Connection** (p. 1131) objects returned implement the CMS **Connection** (p. 1131) interface and hide the CMS Provider specific implementation details behind that interface.*

- class **ConnectionMetaData**

*A **ConnectionMetaData** (p. 1237) object provides information describing the **Connection** (p. 1131) object.*

- class **DeliveryMode**

This is an Abstract class whose purpose is to provide a container for the delivery mode enumeration for CMS messages.

- class **Destination**

*A **Destination** (p. 1480) object encapsulates a provider-specific address.*

- class **ExceptionListener**

*If a CMS provider detects a serious problem, it notifies the client application through an **ExceptionListener** (p. 1581) that is registered with the **Connection** (p. 1131).*

- class **IllegalStateException**

This exception is thrown when a method is invoked at an illegal or inappropriate time or if the provider is not in an appropriate state for the requested operation.

- class **InvalidClientIdException**

This exception must be thrown when a client attempts to set a connection's client ID to a value that is rejected by a provider.

- class **InvalidDestinationException**

This exception must be thrown when a destination either is not understood by a provider or is no longer valid.

- class **InvalidSelectorException**

This exception must be thrown when a CMS client attempts to give a provider a message selector with invalid syntax.

- class **MapMessage**

*A **MapMessage** (p. 2106) object is used to send a set of name-value pairs.*

- class **Message**

Root of all messages.

- class **MessageConsumer**

*A client uses a **MessageConsumer** (p. 2214) to received messages from a destination.*

- class **MessageEOFException**

*This exception must be thrown when an unexpected end of stream has been reached when a **StreamMessage** (p. 3081) or **BytesMessage** (p. 938) is being read.*

- class **MessageFormatException**

This exception must be thrown when a CMS client attempts to use a data type not supported by a message or attempts to read data in a message as the wrong type.

- class **MessageListener**

*A **MessageListener** (p. 2304) object is used to receive asynchronously delivered messages.*

- class **MessageNotReadableException**

This exception must be thrown when a CMS client attempts to read a write-only message.

- class **MessageNotWriteableException**

This exception must be thrown when a CMS client attempts to write to a read-only message.

- class **MessageProducer**

*A client uses a **MessageProducer** (p. 2332) object to send messages to a **Destination** (p. 1480).*

- class **ObjectMessage**

Place holder for interaction with JMS systems that support Java, the C++ client is not responsible for deserializing the contained Object.

- class **Queue**

An interface encapsulating a provider-specific queue name.

- class **QueueBrowser**

*This class implements in interface for browsing the messages in a **Queue** (p. 2674) without removing them.*

- class **Session**
*A **Session** (p. 2839) object is a single-threaded context for producing and consuming messages.*
- class **Startable**
Interface for a class that implements the start method.
- class **Stoppable**
Interface for a class that implements the stop method.
- class **StreamMessage**
*Interface for a **StreamMessage** (p. 3081).*
- class **TemporaryQueue**
*Defines a Temporary **Queue** (p. 2674) based **Destination** (p. 1480).*
- class **TemporaryTopic**
*Defines a Temporary **Topic** (p. 3215) based **Destination** (p. 1480).*
- class **TextMessage**
Interface for a text message.
- class **Topic**
An interface encapsulating a provider-specific topic name.
- class **UnsupportedOperationException**
This exception must be thrown when a CMS client attempts use a CMS method that is not implemented or not supported by the CMS Provider in use.

5.30 decaf::internal Namespace Reference

Namespaces

- namespace **io**
- namespace **net**
- namespace **nio**
- namespace **util**

Data Structures

- class **AprPool**
Wraps an APR pool object so that classes in decaf can create a static member for use in static methods where apr function calls that need a pool are made.
- class **DecafRuntime**
Handles APR initialization and termination.

5.31 decaf::internal::io Namespace Reference

Data Structures

- class **StandardErrorOutputStream**

Wrapper Around the Standard error Output facility on the current platform.

- class **StandardInputStream**
- class **StandardOutputStream**

5.32 decaf::internal::net Namespace Reference

Data Structures

- class **URIEncoderDecoder**
- class **URIHelper**

Helper class used by the URI classes in encoding and decoding of URI's.

- class **URIType**

Basic type object that holds data that composes a given URI.

5.33 decaf::internal::nio Namespace Reference

Data Structures

- class **BufferFactory**

*Factory class used by static methods in the **decaf::nio** (p. 128) package to create the various default version of the NIO interfaces.*

- class **ByteBuffer**

This class defines six categories of operations upon byte buffers:.

- class **ByteArrayPerspective**

*This class extends **ByteArray** to create a reference counted byte array that can be held and used by several different **ByteBuffers** and allow them to know on destruction whose job it is to delete the perspective.*

- class **CharArrayBuffer**
- class **DoubleArrayBuffer**
- class **FloatArrayBuffer**
- class **IntArrayBuffer**
- class **LongArrayBuffer**
- class **ShortArrayBuffer**

5.34 decaf::internal::util Namespace Reference

Namespaces

- namespace **concurrent**

Data Structures

- class **ByteArrayAdapter**

This class adapts primitive type arrays to a base byte array so that the classes can inter-operate on the same base byte array without copying data.

- class **HexStringParser**
- class **TimerTaskHeap**

A Binary Heap implemented specifically for the Timer class in Decaf Util.

5.35 decaf::internal::util::concurrent Namespace Reference

Data Structures

- class **ConditionImpl**
- class **MutexImpl**
- class **SynchronizableImpl**

A convenience class used by some Decaf classes to implement the Synchronizable interface when there is no issues related to multiple inheritance.

- class **Transferer**

Shared internal API for dual stacks and queues.

- class **TransferQueue**

This extends Scherer-Scott dual queue algorithm, differing, among other ways, by using modes within nodes rather than marked pointers.

- class **TransferStack**

5.36 decaf::io Namespace Reference

Data Structures

- class **BlockingByteArrayInputStream**
This is a blocking version of a byte buffer stream.
- class **BufferedInputStream**
A wrapper around another input stream that performs a buffered read, where it reads more data than it needs in order to reduce the number of io operations on the input stream.
- class **BufferedOutputStream**
Wrapper around another output stream that buffers output before writing to the target output stream.
- class **ByteArrayInputStream**
*Simple implementation of **InputStream** (p. 1740) that wraps around an STL Vector `std::vector<unsigned char>`.*
- class **ByteArrayOutputStream**
- class **Closeable**
Interface for a class that implements the close method.
- class **DataInputStream**
A data input stream lets an application read primitive Java data types from an underlying input stream in a machine-independent way.
- class **DataOutputStream**
A data output stream lets an application write primitive Java data types to an output stream in a portable way.
- class **EOFException**
- class **FilterInputStream**
*A **FilterInputStream** (p. 1631) contains some other input stream, which it uses as its basic source of data, possibly transforming the data along the way or providing additional functionality.*
- class **FilterOutputStream**
This class is the superclass of all classes that filter output streams.
- class **InputStream**
Base interface for an input stream.
- class **InterruptedIOException**
- class **IOException**
- class **OutputStream**
Base interface for an output stream.
- class **Reader**
- class **UnsupportedEncodingException**
Thrown when the the Character Encoding is not supported.

- class **UTFDataFormatException**

Thrown from classes that attempt to read or write a UTF-8 encoded string and an encoding error is encountered.

- class **Writer**

5.37 decaf::lang Namespace Reference

Namespaces

- namespace **exceptions**

Data Structures

- class **Appendable**
- class **Boolean**
- class **Byte**
- class **Character**
- class **CharSequence**

*A **CharSequence** (p. 1014) is a readable sequence of char values.*

- class **Comparable**

This interface imposes a total ordering on the objects of each class that implements it.

- class **Double**
- class **Exception**
- class **Float**
- class **Integer**
- class **Iterable**

*Implementing this interface allows an object to be cast to an **Iterable** (p. 1830) type for generic collections API calls.*

- class **Long**
- class **Math**

*The class **Math** (p. 2126) contains methods for performing basic numeric operations such as the elementary exponential, logarithm, square root, and trigonometric functions.*

- class **Number**

*The abstract class **Number** (p. 2432) is the superclass of classes **Byte** (p. 840), **Double** (p. 1537), **Float** (p. 1647), **Integer** (p. 1762), **Long** (p. 2057), and **Short** (p. 2906).*

- class **AtomicRefCounter**
- struct **STATIC_CAST_TOKEN**
- struct **DYNAMIC_CAST_TOKEN**
- class **Pointer**

*Decaf's implementation of a Smart **Pointer** (p. 2497) that is a template on a Type and is Thread Safe if the default Reference Counter is used.*

- class **PointerComparator**

*This implementation of Comparator is designed to allows objects in a Collection to be sorted or tested for equality based on the value of the Object being Pointed to and not the value of the contained pointer in the **Pointer** (p. 2497) instance.*

- class **Runnable**

Interface for a runnable object - defines a task that can be run by a thread.

- class **Runtime**
- class **Short**
- class **System**
- class **ThreadGroup**
- class **Throwable**

This class represents an error that has occurred.

5.39 decaf::net Namespace Reference

Data Structures

- class **BindException**
- class **BufferedSocket**

*Buffered **Socket** (p. 2964) class that wraps a **Socket** (p. 2964) derived object and provides Buffered input and Output Streams to improve the efficiency of the reads and writes.*

- class **ConnectException**
- class **HttpRetryException**
- class **MalformedURLErrorException**
- class **NoRouteToHostException**
- class **PortUnreachableException**
- class **ProtocolException**
- class **ServerSocket**

A server socket class (for testing purposes).

- class **Socket**
- class **SocketError**

Static utility class to simplify handling of error codes for socket operations.

- class **SocketException**

Exception for errors when manipulating sockets.

- class **SocketFactory**

***Socket** (p. 2964) Factory implementation for use in Creating Sockets.*

- class **SocketInputStream**

Input stream for performing reads on a socket.

- class **SocketOutputStream**

Output stream for performing write operations on a socket.

- class **SocketTimeoutException**
- class **TcpSocket**

Platform-independent implementation of the socket interface.

- class **UnknownHostException**
- class **UnknownServiceException**
- class **URI**

*This class represents an instance of a **URI** (p. 3308) as defined by RFC 2396.*

- class **URISyntaxException**
- class **URL**

*Class **URL** (p. 3347) represents a Uniform Resource Locator, a pointer to a "resource" on the World Wide Web.*

- class **URLDecoder**
- class **URLEncoder**

5.40 decaf::nio Namespace Reference

Data Structures

- class **Buffer**

A container for data of a specific primitive type.

- class **BufferOverflowException**
- class **BufferUnderflowException**
- class **ByteBuffer**

This class defines six categories of operations upon byte buffers:.

- class **CharBuffer**

This class defines four categories of operations upon character buffers:.

- class **DoubleBuffer**

This class defines four categories of operations upon double buffers:.

- class **FloatBuffer**

This class defines four categories of operations upon float buffers:.

- class **IntBuffer**

This class defines four categories of operations upon int buffers:.

- class **InvalidMarkException**

- class **LongBuffer**

This class defines four categories of operations upon long long buffers:.

- class **ReadOnlyBufferException**

- class **ShortBuffer**

This class defines four categories of operations upon short buffers:.

5.44 decaf::security::cert Namespace Reference

Data Structures

- class **Certificate**
Base interface for all identity certificates.
- class **CertificateEncodingException**
- class **CertificateException**
- class **CertificateExpiredException**
- class **CertificateNotYetValidException**
- class **CertificateParsingException**
- class **X509Certificate**
Base interface for all identity certificates.

5.45 decaf::security_provider Namespace Reference

Namespaces

- namespace **unix**

Data Structures

- class **SecurityProvider**
- class **SecurityProviderMap**

Lookup Map for Connector Factories.

- class **SecurityProviderRegistrar**

Registers the passed in provider into the provider map, this class can manage the lifetime of the registered provider (default behaviour).

5.46 decaf::security_provider::unix Namespace Reference

Namespaces

- namespace `openssl`

5.47 decaf::security_provider::unix::openssl Namespace Reference

Data Structures

- class **OpenSSLX500Principal**
The `OpenSSLX500Principal` (p. 2439) wraps around an `OpenSSL X509_NAME` structure.
- class **OpenSSLX509Certificate**

5.48 decaf::util Namespace Reference

Namespaces

- namespace **comparators**
- namespace **concurrent**
- namespace **logging**

Data Structures

- class **AbstractCollection**

*This class provides a skeletal implementation of the **Collection** (p. 1054) interface, to minimize the effort required to implement this interface.*

- class **AbstractList**

*This class provides a skeletal implementation of the **List** (p. 1984) interface to minimize the effort required to implement this interface backed by a "random access" data store (such as an array).*

- class **AbstractMap**

*This class provides a skeletal implementation of the **Map** (p. 2094) interface, to minimize the effort required to implement this interface.*

- class **AbstractQueue**

*This class provides skeletal implementations of some **Queue** (p. 2671) operations.*

- class **AbstractSequentialList**

*This class provides a skeletal implementation of the **List** (p. 1984) interface to minimize the effort required to implement this interface backed by a "sequential access" data store (such as a linked list).*

- class **AbstractSet**

*This class provides a skeletal implementation of the **Set** (p. 2905) interface to minimize the effort required to implement this interface.*

- class **Collection**

The root interface in the collection hierarchy.

- class **Comparator**

A comparison function, which imposes a total ordering on some collection of objects.

- class **Date**

Wrapper class around a time value in milliseconds.

- class **Iterator**

Defines an object that can be used to iterate over the elements of a collection.

- class **List**

An ordered collection (also known as a sequence).

- class **ListIterator**

An iterator for lists that allows the programmer to traverse the list in either direction, modify the list during iteration, and obtain the iterator's current position in the list.

- class **Map**

***Map** (p. 2094) template that wraps around a `std::map` to provide a more user-friendly interface and to provide common functions that do not exist in `std::map`.*

- class **PriorityQueue**

An unbounded priority queue based on a binary heap algorithm.

- class **Properties**

Java-like properties class for mapping string names to string values.

- class **Queue**

A kind of collection provides advanced operations than other basic collections, such as insertion, extraction, and inspection.

- class **Random**

***Random** (p. 2677) Value Generator which is used to generate a stream of pseudorandom numbers.*

- class **Set**

A collection that contains no duplicate elements.

- class **StlList**

***List** (p. 1984) class that wraps the STL list object to provide a simpler interface and additional methods not provided by the STL type.*

- class **StlMap**

***Map** (p. 2094) template that wraps around a `std::map` to provide a more user-friendly interface and to provide common functions that do not exist in `std::map`.*

- class **StlQueue**

*The **Queue** (p. 2671) class accepts messages with an `psuh(m)` command where `m` is the message to be queued.*

- class **StlSet**

***Set** (p. 2905) template that wraps around a `std::set` to provide a more user-friendly interface and to provide common functions that do not exist in `std::set`.*

- class **StringTokenizer**

- class **Timer**

A facility for threads to schedule tasks for future execution in a background thread.

- class **TimerTask**

*A Base class for a task object that can be scheduled for one-time or repeated execution by a **Timer** (p. 3188).*

- class **UUID**

*A class that represents an immutable universally unique identifier (**UUID** (p. 3356)).*

- namespace **locks**

Data Structures

- class **ConditionHandle**
- class **MutexHandle**
- class **BrokenBarrierException**
- class **Callable**

A task that returns a result and may throw an exception.

- class **CancellationException**
- class **ConcurrentMap**

*Interface for a **Map** (p. 2094) type that provides additional atomic putIfAbsent, remove, and replace methods alongside the already available **Map** (p. 2094) interface.*

- class **ConcurrentStlMap**

***Map** (p. 2094) template that wraps around a std::map to provide a more user-friendly interface and to provide common functions that do not exist in std::map.*

- class **CountDownLatch**
- class **Delayed**

A mix-in style interface for marking objects that should be acted upon after a given delay.

- class **ExecutionException**
- class **Executor**

*An object that executes submitted **decaf.lang Runnable** (p. 2816) tasks.*

- class **ExecutorService**

*An **Executor** (p. 1608) that provides methods to manage termination and methods that can produce a **Future** (p. 1701) for tracking progress of one or more asynchronous tasks.*

- class **Future**

*A **Future** (p. 1701) represents the result of an asynchronous computation.*

- class **Lock**

A wrapper class around a given synchronization mechanism that provides automatic release upon destruction.

- class **Mutex**

***Mutex** (p. 2385) object that offers recursive support on all platforms as well as providing the ability to use the standard wait / notify pattern used in languages like Java.*

- class **PooledThread**
- class **PooledThreadListener**

*Abstract Listener Interface for users of **ThreadPool** (p. 3175).*

- class **RejectedExecutionException**
- class **RejectedExecutionHandler**

*A handler for tasks that cannot be executed by a **ThreadPoolExecutor** (p. ??).*

- class **Semaphore**

A counting semaphore.

- class **Synchronizable**

The interface for all synchronizable objects (that is, objects that can be locked and unlocked).

- class **SynchronousQueue**

*A **BlockingQueue** blocking queue} in which each insert operation must wait for a corresponding remove operation by another thread, and vice versa.*

- class **TaskListener**

- class **ThreadFactory**

*public interface **ThreadFactory** (p. 3172)*

- class **ThreadPool**

Defines a Thread Pool object that implements the functionality of pooling threads to perform user tasks.

- class **TimeoutException**

- class **TimeUnit**

*A **TimeUnit** (p. 3205) represents time durations at a given unit of granularity and provides utility methods to convert across units, and to perform timing and delay operations in these units.*

Data Structures

- class **Condition**

***Condition** (p. 1118) factors out the **Mutex** (p. 2385) monitor methods (wait, notify and notifyAll) into distinct objects to give the effect of having multiple wait-sets per object, by combining them with the use of arbitrary **Lock** (p. 2017) implementations.*

- class **Lock**

***Lock** (p. 2017) implementations provide more extensive locking operations than can be obtained using synchronized statements.*

- class **LockSupport**

Basic thread blocking primitives for creating locks and other synchronization classes.

- class **ReadWriteLock**

*A **ReadWriteLock** (p. 2688) maintains a pair of associated locks, one for read-only operations and one for writing.*

- class **ReentrantLock**

*A reentrant mutual exclusion **Lock** (p. 2017) with extended capabilities.*

5.53 decaf::util::logging Namespace Reference

Data Structures

- class **Filter**

A **Filter** (p. 1630) can be used to provide fine grain control over what is logged, beyond the control provided by log levels.

- class **Formatter**

A **Formatter** (p. 1699) provides support for formatting *LogRecords*.

- class **Handler**

A **Handler** (p. 1709) object takes log messages from a **Logger** (p. 2028) and exports them.

- class **Logger**

- class **LoggerHierarchy**

- class **LogManager**

There is a single global **LogManager** (p. 2045) object that is used to maintain a set of shared state about *Loggers* and log services.

- class **LogRecord**

- class **LogWriter**

- class **MarkBlockLogger**

Defines a class that can be used to mark the entry and exit from scoped blocks.

- class **PropertiesChangeListener**

Defines the interface that classes can use to listen for change events on **Properties** (p. 2657).

- class **SimpleFormatter**

Print a brief summary of the **LogRecord** (p. 2050) in a human readable format.

- class **SimpleLogger**

- class **StreamHandler**

Enumerations

- enum **Level** {

Off, Null, Markblock, Debug,

Info, Warn, Error, Fatal,

Public Member Functions

- virtual ~**AbstractCollection** ()
- **AbstractCollection**< E > & **operator=** (const **AbstractCollection**< E > &collection)
Assignment Operator, copy element from the source collection to this collection after clearing any element stored in this collection.
- virtual bool **add** (const E &value DECAF_UNUSED)
throw (lang::exceptions::UnsupportedOperationException,
lang::exceptions::IllegalArgumentException, lang::exceptions::IllegalStateException)
Ensures that this collection contains the specified element (optional operation).
- virtual bool **addAll** (const **Collection**< E > &collection)
throw (lang::exceptions::UnsupportedOperationException,
lang::exceptions::IllegalArgumentException, lang::exceptions::IllegalStateException)
Adds all of the elements in the specified collection to this collection (optional operation).
- virtual void **clear** () throw (lang::exceptions::UnsupportedOperationException)
Removes all of the elements from this collection (optional operation).
- virtual void **copy** (const **Collection**< E > &collection)
*Renders this **Collection** (p.1054) as a Copy of the given **Collection** (p.1054).*

- virtual bool **contains** (const E &value) const throw (lang::Exception)
Returns true if this collection contains the specified element.
- virtual bool **containsAll** (const **Collection**< E > &collection) const throw (lang::Exception)
Returns true if this collection contains all of the elements in the specified collection.
- virtual bool **equals** (const **Collection**< E > &collection) const
*Answers true if this **Collection** (p. 1054) and the one given are the same size and if each element contained in the **Collection** (p. 1054) given is equal to an element contained in this collection.*
- virtual bool **isEmpty** () const
Returns true if this collection contains no elements.
- virtual bool **remove** (const E &value) throw (lang::exceptions::UnsupportedOperationException, lang::exceptions::IllegalArgumentException)
Removes a single instance of the specified element from this collection, if it is present (optional operation).
- virtual bool **removeAll** (const **Collection**< E > &collection) throw (lang::exceptions::UnsupportedOperationException, lang::exceptions::IllegalArgumentException)
Removes all of this collection's elements that are also contained in the specified collection (optional operation).
- virtual bool **retainAll** (const **Collection**< E > &collection) throw (lang::exceptions::UnsupportedOperationException, lang::exceptions::IllegalArgumentException)
Retains only the elements in this collection that are contained in the specified collection (optional operation).
- virtual std::vector< E > **toArray** () const
*Answers an STL vector containing copies of all elements contained in this **Collection** (p. 1054).*
- virtual void **lock** () throw (decaf::lang::exceptions::RuntimeException)
Locks the object.
- virtual bool **tryLock** () throw (decaf::lang::exceptions::RuntimeException)
Attempts to Lock the object, if the lock is already held by another thread than this method returns false.
- virtual void **unlock** () throw (decaf::lang::exceptions::RuntimeException)
Unlocks the object.
- virtual void **wait** () throw (decaf::lang::exceptions::RuntimeException, decaf::lang::exceptions::IllegalMonitorStateException, decaf::lang::exceptions::InterruptedException)
Waits on a signal from this object, which is generated by a call to Notify.
- virtual void **wait** (long long millisecs) throw (decaf::lang::exceptions::RuntimeException, decaf::lang::exceptions::IllegalMonitorStateException, decaf::lang::exceptions::InterruptedException)

Waits on a signal from this object, which is generated by a call to Notify.

- virtual void **wait** (long long millisecs, int nanos) throw (decaf::lang::exceptions::RuntimeException, decaf::lang::exceptions::IllegalArgumentException, decaf::lang::exceptions::IllegalMonitorStateException, decaf::lang::exceptions::InterruptedException)

Waits on a signal from this object, which is generated by a call to Notify.

- virtual void **notify** () throw (decaf::lang::exceptions::RuntimeException, decaf::lang::exceptions::IllegalMonitorStateException)

Signals a waiter on this object that it can now wake up and continue.

- virtual void **notifyAll** () throw (decaf::lang::exceptions::RuntimeException, decaf::lang::exceptions::IllegalMonitorStateException)

Signals the waiters on this object that it can now wake up and continue.

Protected Attributes

- util::concurrent::Mutex mutex

6.1.1 Detailed Description

template<typename E> class decaf::util::AbstractCollection< E >

This class provides a skeletal implementation of the **Collection** (p.1054) interface, to minimize the effort required to implement this interface. To implement an unmodifiable collection, the programmer needs only to extend this class and provide implementations for the iterator and size methods. (The iterator returned by the iterator method must implement hasNext and next.)

To implement a modifiable collection, the programmer must additionally override this class's add method (which otherwise throws an UnsupportedOperationException), and the iterator returned by the iterator method must additionally implement its remove method.

The programmer should generally provide a void (no argument) and **Collection** (p.1054) constructor, as per the recommendation in the **Collection** (p.1054) interface specification.

The documentation for each non-abstract method in this class describes its implementation in detail. Each of these methods may be overridden if the collection being implemented admits a more efficient implementation.

Since:

1.0

6.1.2 Constructor & Destructor Documentation

6.1.2.1 `template<typename E> virtual decaf::util::AbstractCollection< E
>::~~AbstractCollection () [inline, virtual]`

6.1.3 Member Function Documentation

6.1.3.1 `template<typename E> virtual bool decaf::util::AbstractCollection<
E >::add (const E &value DECAF_UNUSED) throw
(lang::exceptions::UnsupportedOperationException,
lang::exceptions::IllegalArgumentException,
lang::exceptions::IllegalStateException) [inline,
virtual]`

Ensures that this collection contains the specified element (optional operation). Returns true if this collection changed as a result of the call. (Returns false if this collection does not permit duplicates and already contains the specified element.)

Collections that support this operation may place limitations on what elements may be added to this collection. **Collection** (p. 1054) classes should clearly specify in their documentation any restrictions on what elements may be added.

If a collection refuses to add a particular element for any reason other than that it already contains the element, it must throw an exception (rather than returning false). This preserves the invariant that a collection always contains the specified element after this call returns.

This implementation always throws an `UnsupportedOperationException`.

Parameters:

value - The element that must be ensured to be in this collection.

Returns:

true if the collection was changed as a result of this call.

Exceptions:

UnsupportedOperationException if the add operation is not supported by this collection

IllegalArgumentException if some property of the element prevents it from being added to this collection

IllegalStateException if the element cannot be added at this time due to insertion restrictions

Referenced by `decaf::util::AbstractCollection< Pointer< BackupTransport > >::addAll()`, `decaf::util::AbstractCollection< Pointer< BackupTransport > >::copy()`, and `decaf::util::AbstractCollection< Pointer< BackupTransport > >::operator=()`.

```

6.1.3.2  template<typename E> virtual bool decaf::util::AbstractCollection<
        E >::addAll (const Collection< E > & collection) throw
        ( lang::exceptions::UnsupportedOperationException,
        lang::exceptions::IllegalArgumentException,
        lang::exceptions::IllegalStateException ) [inline,
        virtual]

```

Adds all of the elements in the specified collection to this collection (optional operation). The behavior of this operation is undefined if the specified collection is modified while the operation is in progress. (This implies that the behavior of this call is undefined if the specified collection is this collection, and this collection is nonempty.)

This implementation iterates over the specified collection, and adds each object returned by the iterator to this collection, in turn.

Note that this implementation will throw an UnsupportedOperationException unless add is overridden (assuming the specified collection is non-empty).

Parameters:

collection - The **Collection** (p. 1054) whose elements are to be added to this **Collection** (p. 1054).

Returns:

true if the collection was changed as a result of this call.

Exceptions:

UnsupportedOperationException if the addAll operation is not supported by this collection

IllegalArgumentException if some property of the element prevents it from being added to this collection

IllegalStateException if the element cannot be added at this time due to insertion restrictions

Implements **decaf::util::Collection< E >** (p. 1057).

Reimplemented in **decaf::util::AbstractQueue< E >** (p. 163).

```

6.1.3.3  template<typename E> virtual void decaf::util::AbstractCollection< E
        >::clear () throw ( lang::exceptions::UnsupportedOperationException )
        [inline, virtual]

```

Removes all of the elements from this collection (optional operation). The collection will be empty after this method returns.

This implementation iterates over this collection, removing each element using the **Iterator.remove** (p. 1833) operation. Most implementations will probably choose to override this method for efficiency.

Note that this implementation will throw an UnsupportedOperationException if the iterator returned by this collection's iterator method does not implement the remove method and this collection is non-empty.

Exceptions:

UnsupportedOperationException if the clear operation is not supported by this collection

Implements **decaf::util::Collection< E >** (p. 1057).

Reimplemented in **decaf::util::AbstractQueue< E >** (p. 164), **decaf::util::PriorityQueue< E >** (p. 2574), **decaf::util::StlList< E >** (p. 3024), **decaf::util::StlSet< E >** (p. 3054), **decaf::util::StlList< CompositeTask * >** (p. 3024), **decaf::util::StlList< URI >** (p. 3024), **decaf::util::StlList< Pointer< DestinationInfo > >** (p. 3024), **decaf::util::StlList< PrimitiveValueNode >** (p. 3024), **decaf::util::StlList< Pointer< Command > >** (p. 3024), **decaf::util::StlList< Pointer< BackupTransport > >** (p. 3024), **decaf::util::StlSet< transport::TransportListener * >** (p. 3054), **decaf::util::StlSet< Pointer< Synchronization > >** (p. 3054), and **decaf::util::StlSet< ActiveMQSession * >** (p. 3054).

Referenced by **decaf::util::AbstractCollection< Pointer< BackupTransport > >::copy()**, and **decaf::util::AbstractCollection< Pointer< BackupTransport > >::operator=()**.

6.1.3.4 `template<typename E> virtual bool decaf::util::AbstractCollection< E >::contains (const E & value) const throw (lang::Exception)` [inline, virtual]

Returns true if this collection contains the specified element. This implementation iterates over the elements in the collection, checking each element in turn for equality with the specified element.

Parameters:

value - the value whose presence is to be queried for in this **Collection** (p. 1054).

Returns:

true if the value is contained in this collection

Exceptions:

Exception if an error occurs,

Implements **decaf::util::Collection< E >** (p. 1058).

Reimplemented in **decaf::util::StlList< E >** (p. 3024), **decaf::util::StlSet< E >** (p. 3055), **decaf::util::StlList< CompositeTask * >** (p. 3024), **decaf::util::StlList< URI >** (p. 3024), **decaf::util::StlList< Pointer< DestinationInfo > >** (p. 3024), **decaf::util::StlList< PrimitiveValueNode >** (p. 3024), **decaf::util::StlList< Pointer< Command > >** (p. 3024), **decaf::util::StlList< Pointer< BackupTransport > >** (p. 3024), **decaf::util::StlSet< transport::TransportListener * >** (p. 3055), **decaf::util::StlSet< Pointer< Synchronization > >** (p. 3055), and **decaf::util::StlSet< ActiveMQSession * >** (p. 3055).

Referenced by **decaf::util::AbstractCollection< Pointer< BackupTransport > >::containsAll()**.

6.1.3.5 `template<typename E> virtual bool decaf::util::AbstractCollection< E >::containsAll (const Collection< E > & collection) const throw (lang::Exception)` [inline, virtual]

Returns true if this collection contains all of the elements in the specified collection. This implementation iterates over the specified collection, checking each element returned by the iterator in turn to see if it's contained in this collection. If all elements are so contained true is returned, otherwise false.

Parameters:

collection collection to be checked for containment in this collection

Returns:

true if this collection contains all of the elements in the specified collection.

Exceptions:

Exception if an error occurs,

Implements **decaf::util::Collection< E >** (p. 1058).

Referenced by **decaf::util::AbstractCollection< Pointer< BackupTransport > >::equals()**.

6.1.3.6 **template<typename E> virtual void decaf::util::AbstractCollection< E >::copy (const Collection< E > & collection) [inline, virtual]**

Renders this **Collection** (p. 1054) as a Copy of the given **Collection** (p. 1054). This implementation iterates over the contents of the given collection adding each to this collection after first calling this Collection's clear method.

Parameters:

collection - the collection to mirror.

6.1.3.7 **template<typename E> virtual bool decaf::util::AbstractCollection< E >::equals (const Collection< E > & collection) const [inline, virtual]**

Answers true if this **Collection** (p. 1054) and the one given are the same size and if each element contained in the **Collection** (p. 1054) given is equal to an element contained in this collection.

Parameters:

collection - The **Collection** (p. 1054) to be compared to this one.

Returns:

true if this **Collection** (p. 1054) is equal to the one given.

Implements **decaf::util::Collection< E >** (p. 1059).

6.1.3.8 **template<typename E> virtual bool decaf::util::AbstractCollection< E >::isEmpty () const [inline, virtual]**

Returns true if this collection contains no elements. This implementation returns **size()** (p. 1062) == 0.

Returns:

true if the size method return 0.

Implements **decaf::util::Collection< E >** (p. 1059).

Reimplemented in **decaf::util::StlList< E >** (p. 3025), **decaf::util::StlSet< E >** (p. 3055), **decaf::util::StlList< CompositeTask * >** (p. 3025), **decaf::util::StlList< URI >** (p. 3025), **decaf::util::StlList< Pointer< DestinationInfo > >** (p. 3025), **decaf::util::StlList< PrimitiveValueNode >** (p. 3025), **decaf::util::StlList< Pointer< Command > >** (p. 3025),

`decaf::util::StlList< Pointer< BackupTransport > >` (p. 3025), `decaf::util::StlSet< transport::TransportListener * >` (p. 3055), `decaf::util::StlSet< Pointer< Synchronization > >` (p. 3055), and `decaf::util::StlSet< ActiveMQSession * >` (p. 3055).

Referenced by `decaf::util::AbstractQueue< E >::clear()`.

6.1.3.9 `template<typename E> virtual void decaf::util::AbstractCollection< E >::lock () throw (decaf::lang::exceptions::RuntimeException) [inline, virtual]`

Locks the object.

Exceptions:

RuntimeException if an error occurs while locking the object.

Implements `decaf::util::concurrent::Synchronizable` (p. 3123).

6.1.3.10 `template<typename E> virtual void decaf::util::AbstractCollection< E >::notify () throw (decaf::lang::exceptions::RuntimeException, decaf::lang::exceptions::IllegalMonitorStateException) [inline, virtual]`

Signals a waiter on this object that it can now wake up and continue. Must have this object locked before calling.

Exceptions:

IllegalMonitorStateException - if the current thread is not the owner of the the Synchronizable Object.

RuntimeException if an error occurs while notifying one of the waiting threads.

Implements `decaf::util::concurrent::Synchronizable` (p. 3124).

6.1.3.11 `template<typename E> virtual void decaf::util::AbstractCollection< E >::notifyAll () throw (decaf::lang::exceptions::RuntimeException, decaf::lang::exceptions::IllegalMonitorStateException) [inline, virtual]`

Signals the waiters on this object that it can now wake up and continue. Must have this object locked before calling.

Exceptions:

IllegalMonitorStateException - if the current thread is not the owner of the the Synchronizable Object.

RuntimeException if an error occurs while notifying the waiting threads.

Implements `decaf::util::concurrent::Synchronizable` (p. 3125).

6.1.3.12 `template<typename E> AbstractCollection<E>& decaf::util::AbstractCollection< E >::operator= (const AbstractCollection< E > & collection) [inline]`

Assignment Operator, copy element from the source collection to this collection after clearing any element stored in this collection.

Parameters:

collection - the collection to copy

Returns:

a reference to this collection

```
6.1.3.13  template<typename E> virtual bool decaf::util::AbstractCollection<
           E >::remove (const E & value) throw (
           lang::exceptions::UnsupportedOperationException,
           lang::exceptions::IllegalArgumentException ) [inline, virtual]
```

Removes a single instance of the specified element from this collection, if it is present (optional operation). More formally, removes the first element *e* such that *e* == *o*, if this collection contains one or more such elements. Returns true if this collection contained the specified element (or equivalently, if this collection changed as a result of the call).

This implementation iterates over the collection looking for the specified element. If it finds the element, it removes the element from the collection using the iterator's remove method.

Note that this implementation throws an UnsupportedOperationException if the iterator returned by this collection's iterator method does not implement the remove method and this collection contains the specified object.

Parameters:

value - element to be removed from this collection, if present

Returns:

true if an element was removed as a result of this call

Exceptions:

UnsupportedOperationException if the remove operation is not supported by this collection.

IllegalArgumentException If the value is not a valid entry for this **Collection** (p.1054).

Implements **decaf::util::Collection< E >** (p.1060).

Reimplemented in **decaf::util::PriorityQueue< E >** (p.2577), **decaf::util::StlList< E >** (p.3027), **decaf::util::StlSet< E >** (p.3056), **decaf::util::StlList< CompositeTask * >** (p.3027), **decaf::util::StlList< URI >** (p.3027), **decaf::util::StlList< Pointer< DestinationInfo > >** (p.3027), **decaf::util::StlList< PrimitiveValueNode >** (p.3027), **decaf::util::StlList< Pointer< Command > >** (p.3027), **decaf::util::StlList< Pointer< BackupTransport > >** (p.3027), **decaf::util::StlSet< transport::TransportListener * >** (p.3056), **decaf::util::StlSet< Pointer< Synchronization > >** (p.3056), and **decaf::util::StlSet< ActiveMQSession * >** (p.3056).

```
6.1.3.14  template<typename E> virtual bool decaf::util::AbstractCollection<
           E >::removeAll (const Collection< E > & collection)
           throw ( lang::exceptions::UnsupportedOperationException,
           lang::exceptions::IllegalArgumentException ) [inline, virtual]
```

Removes all of this collection's elements that are also contained in the specified collection (optional operation). After this call returns, this collection will contain no elements in common with the

specified collection.

This implementation iterates over this collection, checking each element returned by the iterator in turn to see if it's contained in the specified collection. If it's so contained, it's removed from this collection with the iterator's remove method.

Note that this implementation will throw an `UnsupportedOperationException` if the iterator returned by the iterator method does not implement the remove method and this collection contains one or more elements in common with the specified collection.

Parameters:

collection - collection containing elements to be removed from this collection

Returns:

true if this collection changed as a result of the call

Exceptions:

UnsupportedOperationException if the remove operation is not supported by this collection

IllegalArgumentException.

Implements `decaf::util::Collection< E >` (p. 1060).

Reimplemented in `decaf::util::AbstractSet< E >` (p. 167), `decaf::util::AbstractSet< transport::TransportListener * >` (p. 167), `decaf::util::AbstractSet< Pointer< Synchronization > >` (p. 167), and `decaf::util::AbstractSet< ActiveMQSession * >` (p. 167).

```
6.1.3.15  template<typename E> virtual bool decaf::util::AbstractCollection<
           E >::retainAll (const Collection< E > & collection)
           throw ( lang::exceptions::UnsupportedOperationException,
                   lang::exceptions::IllegalArgumentException ) [inline, virtual]
```

Retains only the elements in this collection that are contained in the specified collection (optional operation). In other words, removes from this collection all of its elements that are not contained in the specified collection.

This implementation iterates over this collection, checking each element returned by the iterator in turn to see if it's contained in the specified collection. If it's not so contained, it's removed from this collection with the iterator's remove method.

Note that this implementation will throw an `UnsupportedOperationException` if the iterator returned by the iterator method does not implement the remove method and this collection contains one or more elements not present in the specified collection.

Parameters:

collection - collection containing elements to be retained in this collection

Returns:

true if this collection changed as a result of the call

Exceptions:

UnsupportedOperationException if the remove operation is not supported by this collection

IllegalArgumentException.

Implements **decaf::util::Collection< E >** (p. 1061).

6.1.3.16 `template<typename E> virtual std::vector<E>
decaf::util::AbstractCollection< E >::toArray () const [inline, virtual]`

Answers an STL vector containing copies of all elements contained in this **Collection** (p. 1054). All the elements in the array will not be referenced by the collection. The elements in the returned array will be sorted to the same order as those returned by the iterator of this collection itself if the collection guarantees the order.

Returns:

an vector of copies of all the elements from this **Collection** (p. 1054)

Implements **decaf::util::Collection< E >** (p. 1062).

6.1.3.17 `template<typename E> virtual bool decaf::util::AbstractCollection<
E >::tryLock () throw (decaf::lang::exceptions::RuntimeException)
[inline, virtual]`

Attempts to Lock the object, if the lock is already held by another thread than this method returns false.

Returns:

true if the lock was acquired, false if it is already held by another thread.

Exceptions:

RuntimeException if an error occurs while locking the object.

Implements **decaf::util::concurrent::Synchronizable** (p. 3126).

6.1.3.18 `template<typename E> virtual void decaf::util::AbstractCollection< E
>::unlock () throw (decaf::lang::exceptions::RuntimeException) [inline,
virtual]`

Unlocks the object.

Exceptions:

RuntimeException if an error occurs while unlocking the object.

Implements **decaf::util::concurrent::Synchronizable** (p. 3127).

6.1.3.19 `template<typename E> virtual void decaf::util::AbstractCollection<E >::wait (long long millisecs, int nanos) throw (decaf::lang::exceptions::RuntimeException, decaf::lang::exceptions::IllegalArgumentException, decaf::lang::exceptions::IllegalMonitorStateException, decaf::lang::exceptions::InterruptedException) [inline, virtual]`

Waits on a signal from this object, which is generated by a call to Notify. Must have this object locked before calling. This wait will timeout after the specified time interval. This method is similar to the one argument wait function except that it add a finer grained control over the amount of time that it waits by adding in the additional nanosecond argument.

NOTE: The ability to wait accurately at a nanosecond scale depends on the platform and OS that the Decaf API is running on, some systems do not provide an accurate enough clock to provide this level of granularity.

Parameters:

millisecs the time in milliseconds to wait, or WAIT_INFINITE

nanos additional time in nanoseconds with a range of 0-999999

Exceptions:

IllegalArgumentException if an error occurs or the nanos argument is not in the range of [0-999999]

RuntimeException if an error occurs while waiting on the object.

InterruptedException if the wait is interrupted before it completes.

IllegalMonitorStateException - if the current thread is not the owner of the the Synchronizable Object.

Implements `decaf::util::concurrent::Synchronizable` (p. 3128).

6.1.3.20 `template<typename E> virtual void decaf::util::AbstractCollection<E >::wait (long long millisecs) throw (decaf::lang::exceptions::RuntimeException, decaf::lang::exceptions::IllegalMonitorStateException, decaf::lang::exceptions::InterruptedException) [inline, virtual]`

Waits on a signal from this object, which is generated by a call to Notify. Must have this object locked before calling. This wait will timeout after the specified time interval.

Parameters:

millisecs the time in milliseconds to wait, or WAIT_INFINITE

Exceptions:

RuntimeException if an error occurs while waiting on the object.

InterruptedException if the wait is interrupted before it completes.

IllegalMonitorStateException - if the current thread is not the owner of the the Synchronizable Object.

Implements `decaf::util::concurrent::Synchronizable` (p. 3130).

6.1.3.21 `template<typename E> virtual void decaf::util::AbstractCollection< E >::wait () throw (decaf::lang::exceptions::RuntimeException, decaf::lang::exceptions::IllegalMonitorStateException, decaf::lang::exceptions::InterruptedException) [inline, virtual]`

Waits on a signal from this object, which is generated by a call to Notify. Must have this object locked before calling.

Exceptions:

RuntimeException if an error occurs while waiting on the object.

InterruptedException if the wait is interrupted before it completes.

IllegalMonitorStateException - if the current thread is not the owner of the the Synchronizable Object.

Implements `decaf::util::concurrent::Synchronizable` (p. 3131).

6.2 decaf::util::AbstractList< E > Class Template Reference

This class provides a skeletal implementation of the **List** (p.1984) interface to minimize the effort required to implement this interface backed by a "random access" data store (such as an array).

#include <src/main/decaf/util/AbstractList.h> Inheritance diagram for decaf::util::AbstractList< E >:

Public Member Functions

- virtual ~**AbstractList** ()

6.2.1 Detailed Description

template<typename E> class decaf::util::AbstractList< E >

This class provides a skeletal implementation of the **List** (p.1984) interface to minimize the effort required to implement this interface backed by a "random access" data store (such as an array). For sequential access data (such as a linked list), **AbstractSequentialList** (p.166) should be used in preference to this class.

To implement an unmodifiable list, the programmer needs only to extend this class and provide implementations for the `get(int)` and `size()` (p.1062) methods.

To implement a modifiable list, the programmer must additionally override the `set(int, E)` method (which otherwise throws an `UnsupportedOperationException`). If the list is variable-size the programmer must additionally override the `add(int, E)` and `remove(int)` methods.

The programmer should generally provide a void (no argument) and collection constructor, as per the recommendation in the **Collection** (p.1054) interface specification.

Unlike the other abstract collection implementations, the programmer does not have to provide an iterator implementation; the iterator and list iterator are implemented by this class, on top of the "random access" methods: `get(int)`, `set(int, E)`, `add(int, E)` and `remove(int)`.

The documentation for each non-abstract method in this class describes its implementation in detail. Each of these methods may be overridden if the collection being implemented admits a more efficient implementation.

6.3 decaf::util::AbstractMap< K, V, COMPARATOR > Class Template Reference

This class provides a skeletal implementation of the **Map** (p.2094) interface, to minimize the effort required to implement this interface.

#include <src/main/decaf/util/AbstractMap.h> Inheritance diagram for decaf::util::AbstractMap< K, V, COMPARATOR >:

Public Member Functions

- virtual ~AbstractMap ()

6.3.1 Detailed Description

template<typename K, typename V, typename COMPARATOR> class decaf::util::AbstractMap< K, V, COMPARATOR >

This class provides a skeletal implementation of the **Map** (p.2094) interface, to minimize the effort required to implement this interface. To implement an unmodifiable map, the programmer needs only to extend this class and provide an implementation for the entrySet method, which returns a set-view of the map's mappings. Typically, the returned set will, in turn, be implemented atop **AbstractSet** (p.167). This set should not support the add or remove methods, and its iterator should not support the remove method.

To implement a modifiable map, the programmer must additionally override this class's put method (which otherwise throws an UnsupportedOperationException), and the iterator returned by entrySet().iterator() must additionally implement its remove method.

The programmer should generally provide a void (no argument) and map constructor, as per the recommendation in the **Map** (p.2094) interface specification.

The documentation for each non-abstract method in this class describes its implementation in detail. Each of these methods may be overridden if the map being implemented admits a more efficient implementation.

Public Member Functions

- **AbstractQueue** ()
- virtual ~**AbstractQueue** ()
- virtual bool **add** (const E &value) throw (decaf::lang::exceptions::UnsupportedOperationException, decaf::lang::exceptions::IllegalArgumentException, decaf::lang::exceptions::IllegalStateException)
Inserts the specified element into this queue if it is possible to do so immediately without violating capacity restrictions, returning true upon success and throwing an IllegalStateException if no space is currently available.
- virtual bool **addAll** (const **Collection**< E > &collection) throw (lang::exceptions::UnsupportedOperationException, lang::exceptions::IllegalArgumentException, lang::exceptions::IllegalStateException)
Adds all the elements of a collection to the queue.
- virtual E **remove** () throw (decaf::lang::exceptions::NoSuchElementException)
Retrieves and removes the head of this queue.
- virtual E **element** () const throw (decaf::lang::exceptions::NoSuchElementException)
Retrieves, but does not remove, the head of this queue.
- virtual void **clear** () throw (lang::exceptions::UnsupportedOperationException)
Removes all elements of the queue.

6.4.1 Detailed Description

template<typename E> class decaf::util::AbstractQueue< E >

This class provides skeletal implementations of some **Queue** (p. 2671) operations. Methods add, remove, and element are based on offer, poll, and peek, respectively.

A **Queue** (p. 2671) implementation that extends this class must minimally define a method **Queue** (p. 2671). **offer**(E) which does not permit insertion of null elements, along with methods **Queue** (p. 2671). **peek**() (p. 2672), **Queue.poll**() (p. 2673), **Collection.size**() (p. 1062), and a **Collection.iterator**() (p. 1830) supporting **Iterator.remove**() (p. 1833). Typically, additional methods will be overridden as well. If these requirements cannot be met, consider instead subclassing **AbstractCollection** (p. 147).

Since:

1.0

6.4.2 Constructor & Destructor Documentation

6.4.2.1 `template<typename E > decaf::util::AbstractQueue< E >::AbstractQueue()` [inline]

6.4.2.2 `template<typename E > virtual decaf::util::AbstractQueue< E >::~~AbstractQueue()` [inline, virtual]

6.4.3 Member Function Documentation

6.4.3.1 `template<typename E > virtual bool decaf::util::AbstractQueue< E >::add (const E & value) throw (decaf::lang::exceptions::UnsupportedOperationException, decaf::lang::exceptions::IllegalArgumentException, decaf::lang::exceptions::IllegalStateException)` [inline, virtual]

Inserts the specified element into this queue if it is possible to do so immediately without violating capacity restrictions, returning true upon success and throwing an `IllegalStateException` if no space is currently available. This implementation returns true if offer succeeds, else throws an `IllegalStateException`.

Parameters:

value - the element to offer to the **Queue** (p. 2671).

Returns:

true if the add succeeds.

Exceptions:

IllegalArgumentException if the element cannot be added.

Implements `decaf::util::Collection< E >` (p. 1056).

Reimplemented in `decaf::util::PriorityQueue< E >` (p. 2574).

References `decaf::util::Queue< E >::offer()`.

6.4.3.2 `template<typename E > virtual bool decaf::util::AbstractQueue< E >::addAll (const Collection< E > & collection) throw (lang::exceptions::UnsupportedOperationException, lang::exceptions::IllegalArgumentException, lang::exceptions::IllegalStateException)` [inline, virtual]

Adds all the elements of a collection to the queue. If the collection is the queue itself, then an `IllegalArgumentException` will be thrown out. If during the process, some runtime exception is thrown out, then part of the elements in the collection that have successfully added will remain in the queue.

The result of the method is undefined if the collection is modified during the process of the method.

Parameters:

collection - the collection to be added to the queue.

Returns:

true if the operation succeeds.

Exceptions:

IllegalArgumentException If the collection to be added to the queue is the queue itself.

Reimplemented from **decaf::util::AbstractCollection**< E > (p. 151).

6.4.3.3 `template<typename E> virtual void decaf::util::AbstractQueue< E >::clear
() throw (lang::exceptions::UnsupportedOperationException) [inline,
virtual]`

Removes all elements of the queue. This implementation repeatedly invokes poll until it returns the empty marker.

Reimplemented from **decaf::util::AbstractCollection**< E > (p. 151).

Reimplemented in **decaf::util::PriorityQueue**< E > (p. 2574).

References **decaf::util::AbstractCollection**< E >::isEmpty(), and **decaf::util::Queue**< E >::poll().

6.4.3.4 `template<typename E> virtual E decaf::util::AbstractQueue< E >::element
() const throw (decaf::lang::exceptions::NoSuchElementException)
[inline, virtual]`

Retrieves, but does not remove, the head of this queue. This method differs from peek only in that it throws an exception if this queue is empty.

This implementation returns the result of peek unless the queue is empty.

Returns:

the element in the head of the queue.

Exceptions:

NoSuchElementException if the queue is empty.

Implements **decaf::util::Queue**< E > (p. 2672).

References **decaf::util::Queue**< E >::peek().

6.4.3.5 `template<typename E> virtual E decaf::util::AbstractQueue< E >::remove
() throw (decaf::lang::exceptions::NoSuchElementException) [inline,
virtual]`

Retrieves and removes the head of this queue. This method differs from poll only in that it throws an exception if this queue is empty.

This implementation returns the result of poll unless the queue is empty.

Returns:

a copy of the element in the head of the queue.

Exceptions:

NoSuchElementException if the queue is empty.

Implements **decaf::util::Queue< E >** (p. 2673).

Reimplemented in **decaf::util::PriorityQueue< E >** (p. 2577).

References **decaf::util::Queue< E >::poll()**.

6.5 decaf::util::AbstractSequentialList< E > Class Template Reference

This class provides a skeletal implementation of the **List** (p.1984) interface to minimize the effort required to implement this interface backed by a "sequential access" data store (such as a linked list).

#include <src/main/decaf/util/AbstractSequentialList.h> Inheritance diagram for decaf::util::AbstractSequentialList< E >:

Public Member Functions

- virtual ~AbstractSequentialList ()

6.5.1 Detailed Description

template<typename E> class decaf::util::AbstractSequentialList< E >

This class provides a skeletal implementation of the **List** (p.1984) interface to minimize the effort required to implement this interface backed by a "sequential access" data store (such as a linked list). For random access data (such as an array), **AbstractList** (p.160) should be used in preference to this class.

This class is the opposite of the **AbstractList** (p.160) class in the sense that it implements the "random access" methods (get(int index), set(int index, E element), add(int index, E element) and remove(int index)) on top of the list's list iterator, instead of the other way around.

To implement a list the programmer needs only to extend this class and provide implementations for the listIterator and size methods. For an unmodifiable list, the programmer need only implement the list iterator's hasNext, next, hasPrevious, previous and index methods.

For a modifiable list the programmer should additionally implement the list iterator's set method. For a variable-size list the programmer should additionally implement the list iterator's remove and add methods.

The programmer should generally provide a void (no argument) and collection constructor, as per the recommendation in the **Collection** (p.1054) interface specification.

Since:

1.0

6.6 decaf::util::AbstractSet< E > Class Template Reference

This class provides a skeletal implementation of the **Set** (p. 2905) interface to minimize the effort required to implement this interface.

```
#include <src/main/decaf/util/AbstractSet.h> Inheritance      diagram      for
decaf::util::AbstractSet< E >:
```

Public Member Functions

- virtual **~AbstractSet** ()
- virtual bool **removeAll** (const **Collection**< E > &collection) throw (lang::exceptions::UnsupportedOperationException, lang::exceptions::IllegalArgumentException)
Removes from this set all of its elements that are contained in the specified collection (optional operation).

6.6.1 Detailed Description

```
template<typename E> class decaf::util::AbstractSet< E >
```

This class provides a skeletal implementation of the **Set** (p. 2905) interface to minimize the effort required to implement this interface. The process of implementing a set by extending this class is identical to that of implementing a **Collection** (p. 1054) by extending **AbstractCollection** (p. 147), except that all of the methods and constructors in subclasses of this class must obey the additional constraints imposed by the **Set** (p. 2905) interface (for instance, the add method must not permit addition of multiple instances of an object to a set).

Since:

1.0

6.6.2 Constructor & Destructor Documentation

6.6.2.1 template<typename E> virtual decaf::util::AbstractSet< E >::~AbstractSet () [inline, virtual]

6.6.3 Member Function Documentation

6.6.3.1 template<typename E> virtual bool decaf::util::AbstractSet< E >::removeAll (const **Collection**< E > & collection) throw (lang::exceptions::UnsupportedOperationException, lang::exceptions::IllegalArgumentException) [inline, virtual]

Removes from this set all of its elements that are contained in the specified collection (optional operation). If the specified collection is also a set, this operation effectively modifies this set so that its value is the asymmetric set difference of the two sets.

This implementation determines which is the smaller of this set and the specified collection, by invoking the size method on each. If this set has fewer elements, then the implementation iterates

over this set, checking each element returned by the iterator in turn to see if it is contained in the specified collection. If it is so contained, it is removed from this set with the iterator's remove method. If the specified collection has fewer elements, then the implementation iterates over the specified collection, removing from this set each element returned by the iterator, using this set's remove method.

Note that this implementation will throw an `UnsupportedOperationException` if the iterator returned by the iterator method does not implement the remove method.

Parameters:

collection - The **Collection** (p. 1054) whose elements are to be retained

Returns:

true if the collection changed as a result of this call

Exceptions:

UnsupportedOperationException

IllegalArgumentException

Reimplemented from **decaf::util::AbstractCollection< E >** (p. 155).

The documentation for this class was generated from the following file:

6.9.1 Constructor & Destructor Documentation

6.9.1.1 `activemq::commands::ActiveMQBlobMessage::ActiveMQBlobMessage ()`

6.9.1.2 `virtual
activemq::commands::ActiveMQBlobMessage::~ActiveMQBlobMessage ()
[inline, virtual]`

6.9.2 Member Function Documentation

6.9.2.1 `virtual cms::Message* activemq::commands::ActiveMQBlobMessage::clone
() const [inline, virtual]`

Clone this message exactly, returns a new instance that the caller is required to delete.

Returns:

new copy of this message

Implements **cms::Message** (p. 2168).

6.9.2.2 `virtual ActiveMQBlobMessage* ac-
tivismq::commands::ActiveMQBlobMessage::cloneDataStructure () const
[virtual]`

Clone this object and return a new instance that the caller now owns, this will be an exact copy of this one.

Returns:

new copy of this object.

Reimplemented from **activemq::commands::Message** (p. 2149).

6.9.2.3 `virtual void ac-
tivismq::commands::ActiveMQBlobMessage::copyDataStructure (const
DataStructure * src) [virtual]`

Copy the contents of the passed object into this objects members, overwriting any existing data.

Returns:

src - Source Object

Reimplemented from `activemq::commands::Message` (p. 2150).

6.9.2.4 `virtual bool activemq::commands::ActiveMQBlobMessage::equals (const DataStructure * value) const` [virtual]

Compares the `DataStructure` (p. 1461) passed in to this one, and returns if they are equivalent. Equivalent here means that they are of the same type, and that each element of the objects are the same.

Returns:

true if DataStructure's are Equal.

Reimplemented from `activemq::commands::ActiveMQMessageTemplate< cms::Message >` (p. 369).

6.9.2.5 `virtual unsigned char activemq::commands::ActiveMQBlobMessage::getDataStructureType () const` [virtual]

Get the unique identifier that this object and its own Marshaler share.

Returns:

new `DataStructure` (p. 1461) type copy.

Reimplemented from `activemq::commands::Message` (p. 2152).

6.9.2.6 `std::string activemq::commands::ActiveMQBlobMessage::getMimeType () const` [inline]

Get the Mime Type of the Blob.

Returns:

string holding the MIME Type.

6.9.2.7 `std::string activemq::commands::ActiveMQBlobMessage::getName () const` [inline]

Gets the Name of the Blob.

Returns:

string name of the Blob.

6.9.2.8 `std::string activemq::commands::ActiveMQBlobMessage::getRemoteBlobUrl () const` [inline]

Get the Remote URL of the Blob.

Returns:

string from of the Remote Blob URL.

6.9.2.9 `bool activemq::commands::ActiveMQBlobMessage::isDeletedByBroker () const` [inline]

Gets if this Blob is deleted by the Broker.

Returns:

true if the Blob is deleted by the Broker.

6.9.2.10 `void activemq::commands::ActiveMQBlobMessage::setDeletedByBroker (bool value)` [inline]

Sets the Deleted By Broker flag.

Parameters:

value - set the Delete by broker flag to value.

6.9.2.11 `void activemq::commands::ActiveMQBlobMessage::setMimeType (const std::string & mimeType)` [inline]

Set the Mime Type of the Blob.

Parameters:

mimeType - String holding the MIME Type.

6.9.2.12 `void activemq::commands::ActiveMQBlobMessage::setName (const std::string & name)` [inline]

Sets the Name of the Blob.

Parameters:

name - Name of the Blob.

6.9.2.13 `void activemq::commands::ActiveMQBlobMessage::setRemoteBlobUrl (const std::string & remoteURL)` [inline]

Set the Remote URL of the Blob.

Parameters:

remoteURL - String form of the Remote URL.

6.9.2.14 `virtual std::string activemq::commands::ActiveMQBlobMessage::toString
() const [virtual]`

Returns a string containing the information for this **DataSet** (p.1461) such as its type and value of its elements.

Returns:

formatted string useful for debugging.

Reimplemented from `activemq::commands::Message` (p. 2159).

6.9.3 Field Documentation

6.9.3.1 `const std::string activemq::commands::ActiveMQBlobMessage::BINARY_-
MIME_TYPE [static]`

6.10 activemq:wireformat::openwire::marshal::v3::ActiveMQBlobMessageMarshaller Class Reference

Marshaling code for Open Wire Format for **ActiveMQBlobMessageMarshaller** (p.177).

#include <src/main/activemq/wireformat/openwire/marshal/v3/ActiveMQBlobMessageMarshaller.h>Inheritance diagram for activemq:wireformat::openwire::marshal::v3::ActiveMQBlobMessageMarshaller:

Public Member Functions

- **ActiveMQBlobMessageMarshaller** ()
- virtual **~ActiveMQBlobMessageMarshaller** ()
- virtual **commands::DataStructure * createObject** () const
Creates a new instance of this marshalable type.
- virtual unsigned char **getDataStructureType** () const
Get the Data Structure Type that identifies this Marshaler.
- virtual void **tightUnmarshal** (**OpenWireFormat *wireFormat**, **commands::DataStructure *dataStructure**, **decaf::io::DataInputStream *dataIn**, **utils::BooleanStream *bs**) throw (**decaf::io::IOException**)
Un-marshal an object instance from the data input stream.
- virtual int **tightMarshal** (**OpenWireFormat *wireFormat**, **commands::DataStructure *dataStructure**, **utils::BooleanStream *bs**) throw (**decaf::io::IOException**)
Write the booleans that this object uses to a BooleanStream.
- virtual void **tightMarshal2** (**OpenWireFormat *wireFormat**, **commands::DataStructure *dataStructure**, **decaf::io::DataOutputStream *dataOut**, **utils::BooleanStream *bs**) throw (**decaf::io::IOException**)
Write a object instance to data output stream.
- virtual void **looseUnmarshal** (**OpenWireFormat *wireFormat**, **commands::DataStructure *dataStructure**, **decaf::io::DataInputStream *dataIn**) throw (**decaf::io::IOException**)
Un-marshal an object instance from the data input stream.
- virtual void **looseMarshal** (**OpenWireFormat *wireFormat**, **commands::DataStructure *dataStructure**, **decaf::io::DataOutputStream *dataOut**) throw (**decaf::io::IOException**)
Write a object instance to data output stream.

6.10.1 Detailed Description

Marshaling code for Open Wire Format for **ActiveMQBlobMessageMarshaller** (p.177).
NOTE!: This file is auto generated - do not modify! if you need to make a change, please see the Java Classes in the activemq-openwire-generator module

6.10.2 Constructor & Destructor Documentation

6.10.2.1 `activemq::wireformat::openwire::marshal::v3::ActiveMQBlobMessageMarshaller::ActiveMQBlobMessageMarshaller()` [inline]

6.10.2.2 `virtual activemq::wireformat::openwire::marshal::v3::ActiveMQBlobMessageMarshaller::~~ActiveMQBlobMessageMarshaller()` [inline, virtual]

6.10.3 Member Function Documentation

6.10.3.1 `virtual commands::DataStructure* activemq::wireformat::openwire::marshal::v3::ActiveMQBlobMessageMarshaller::createObject(const commands::DataStructure&) const` [virtual]

Creates a new instance of this marshalable type.

Returns:

new DataStructure object pointer caller owns it.

Implements `activemq::wireformat::openwire::marshal::DataStreamMarshaller` (p. 1419).

6.10.3.2 `virtual unsigned char activemq::wireformat::openwire::marshal::v3::ActiveMQBlobMessageMarshaller::getDataStructureType() const` [virtual]

Get the Data Structure Type that identifies this Marshaler.

Returns:

byte holding the data structure type value

Implements `activemq::wireformat::openwire::marshal::DataStreamMarshaller` (p. 1424).

6.10.3.3 `virtual void activemq::wireformat::openwire::marshal::v3::ActiveMQBlobMessageMarshaller::looseMarshal(const OpenWireFormat* wireFormat, commands::DataStructure* dataStructure, decaf::io::DataOutputStream* dataOut) throw (decaf::io::IOException)` [virtual]

Write a object instance to data output stream.

Parameters:

wireFormat - describes the wire format of the broker

dataStructure - Object to be marshaled

dataOut - BinaryWriter that provides that data sink

Exceptions:

IOException if an error occurs during the marshal.

Reimplemented from `activemq::wireformat::openwire::marshal::v3::MessageMarshaller` (p. 2316).

6.10.3.4 `virtual void activemq::wireformat::openwire::marshal::v3::ActiveMQBlobMessageMarshaller::looseUnmarshal(OpenWireFormat * wireFormat, commands::DataStructure * dataStructure, decaf::io::DataInputStream * dataIn) throw (decaf::io::IOException)` [virtual]

Un-marshall an object instance from the data input stream.

Parameters:

wireFormat - describes the wire format of the broker

dataStructure - Object to be marshaled

dataIn - BinaryReader that provides that data source

Exceptions:

IOException if an error occurs during the unmarshal.

Reimplemented from `activemq::wireformat::openwire::marshal::v3::MessageMarshaller` (p. 2316).

6.10.3.5 `virtual int activemq::wireformat::openwire::marshal::v3::ActiveMQBlobMessageMarshaller::tightMarshal(OpenWireFormat * wireFormat, commands::DataStructure * dataStructure, utils::BooleanStream * bs) throw (decaf::io::IOException)` [virtual]

Write the booleans that this object uses to a BooleanStream.

Parameters:

wireFormat - describes the wire format of the broker

dataStructure - Object to be marshaled

bs - BooleanStream stream used to pack bits from the wire.

Returns:

int value indicating the size of the marshaled object.

Exceptions:

IOException if an error occurs during the marshal.

Reimplemented from `activemq::wireformat::openwire::marshal::v3::MessageMarshaller` (p. 2317).

6.10.3.6 `virtual void activemq::wireformat::openwire::marshal::v3::ActiveMQBlobMessageMarshaller::tightMarshal(OpenWireFormat * wireFormat, commands::DataStructure * dataStructure, decaf::io::DataOutputStream * dataOut, utils::BooleanStream * bs) throw (decaf::io::IOException)` [virtual]

Write a object instance to data output stream.

Parameters:

wireFormat - describes the wire format of the broker
dataStructure - Object to be marshaled
dataOut - BinaryReader that provides that data sink
bs - BooleanStream stream used to pack bits from the wire.

Exceptions:

IOException if an error occurs during the marshal.

Reimplemented from `activemq::wireformat::openwire::marshal::v3::MessageMarshaller` (p. 2318).

6.10.3.7 `virtual void activemq::wireformat::openwire::marshal::v3::ActiveMQBlobMessageMarshaller::tightUnmarshal(OpenWireFormat * wireFormat, commands::DataStructure * dataStructure, decaf::io::DataInputStream * dataIn, utils::BooleanStream * bs) throw (decaf::io::IOException)` [virtual]

Un-marshall an object instance from the data input stream.

Parameters:

wireFormat - describes the wire format of the broker.
dataStructure - Object to be un-marshaled.
dataIn - BinaryReader that provides that data.
bs - BooleanStream stream used to unpack bits from the wire.

Exceptions:

IOException if an error occurs during the unmarshal.

Reimplemented from `activemq::wireformat::openwire::marshal::v3::MessageMarshaller` (p. 2318).

6.11.1 Detailed Description

Marshaling code for Open Wire Format for **ActiveMQBlobMessageMarshaller** (p.181).
NOTE!: This file is auto generated - do not modify! if you need to make a change, please see the Java Classes in the activemq-openwire-generator module

6.11.2 Constructor & Destructor Documentation

6.11.2.1 `activemq::wireformat::openwire::marshal::v1::ActiveMQBlobMessageMarshaller::ActiveMQBlobMessageMarshaller()` [inline]

6.11.2.2 `virtual activemq::wireformat::openwire::marshal::v1::ActiveMQBlobMessageMarshaller::~~ActiveMQBlobMessageMarshaller()` [inline, virtual]

6.11.3 Member Function Documentation

6.11.3.1 `virtual commands::DataStructure* activemq::wireformat::openwire::marshal::v1::ActiveMQBlobMessageMarshaller::createObject(const commands::DataStructure& dataStructure) const` [virtual]

Creates a new instance of this marshalable type.

Returns:

new DataStructure object pointer caller owns it.

Implements `activemq::wireformat::openwire::marshal::DataStreamMarshaller` (p. 1419).

6.11.3.2 `virtual unsigned char activemq::wireformat::openwire::marshal::v1::ActiveMQBlobMessageMarshaller::getDataStructureType() const` [virtual]

Get the Data Structure Type that identifies this Marshaler.

Returns:

byte holding the data structure type value

Implements `activemq::wireformat::openwire::marshal::DataStreamMarshaller` (p. 1424).

6.11.3.3 `virtual void activemq::wireformat::openwire::marshal::v1::ActiveMQBlobMessageMarshaller::marshal(const OpenWireFormat* wireFormat, commands::DataStructure* dataStructure, decaf::io::DataOutputStream* dataOut) throw (decaf::io::IOException)` [virtual]

Write a object instance to data output stream.

Parameters:

wireFormat - describes the wire format of the broker

dataStructure - Object to be marshaled

dataOut - BinaryWriter that provides that data sink

Exceptions:

IOException if an error occurs during the marshal.

Reimplemented from `activemq::wireformat::openwire::marshal::v1::MessageMarshaller` (p. 2326).

6.11.3.4 `virtual void activemq::wireformat::openwire::marshal::v1::ActiveMQBlobMessageMarshaller::looseUnmarshal (OpenWireFormat * wireFormat, commands::DataStructure * dataStructure, decaf::io::DataInputStream * dataIn) throw (decaf::io::IOException)` [virtual]

Un-marshall an object instance from the data input stream.

Parameters:

wireFormat - describes the wire format of the broker

dataStructure - Object to be marshaled

dataIn - BinaryReader that provides that data source

Exceptions:

IOException if an error occurs during the unmarshal.

Reimplemented from `activemq::wireformat::openwire::marshal::v1::MessageMarshaller` (p. 2326).

6.11.3.5 `virtual int activemq::wireformat::openwire::marshal::v1::ActiveMQBlobMessageMarshaller::tightMarshal (OpenWireFormat * wireFormat, commands::DataStructure * dataStructure, utils::BooleanStream * bs) throw (decaf::io::IOException)` [virtual]

Write the booleans that this object uses to a BooleanStream.

Parameters:

wireFormat - describes the wire format of the broker

dataStructure - Object to be marshaled

bs - BooleanStream stream used to pack bits from the wire.

Returns:

int value indicating the size of the marshaled object.

Exceptions:

IOException if an error occurs during the marshal.

Reimplemented from `activemq::wireformat::openwire::marshal::v1::MessageMarshaller` (p. 2327).

6.11.3.6 `virtual void activemq::wireformat::openwire::marshal::v1::ActiveMQBlobMessageMarshaller::tightMarshal(OpenWireFormat * wireFormat, commands::DataStructure * dataStructure, decaf::io::DataOutputStream * dataOut, utils::BooleanStream * bs) throw (decaf::io::IOException)` [virtual]

Write a object instance to data output stream.

Parameters:

wireFormat - describes the wire format of the broker
dataStructure - Object to be marshaled
dataOut - BinaryReader that provides that data sink
bs - BooleanStream stream used to pack bits from the wire.

Exceptions:

IOException if an error occurs during the marshal.

Reimplemented from `activemq::wireformat::openwire::marshal::v1::MessageMarshaller` (p. 2328).

6.11.3.7 `virtual void activemq::wireformat::openwire::marshal::v1::ActiveMQBlobMessageMarshaller::tightUnmarshal(OpenWireFormat * wireFormat, commands::DataStructure * dataStructure, decaf::io::DataInputStream * dataIn, utils::BooleanStream * bs) throw (decaf::io::IOException)` [virtual]

Un-marshall an object instance from the data input stream.

Parameters:

wireFormat - describes the wire format of the broker.
dataStructure - Object to be un-marshaled.
dataIn - BinaryReader that provides that data.
bs - BooleanStream stream used to unpack bits from the wire.

Exceptions:

IOException if an error occurs during the unmarshal.

Reimplemented from `activemq::wireformat::openwire::marshal::v1::MessageMarshaller` (p. 2328).

6.12.3 Member Function Documentation

6.12.3.1 `virtual commands::DataStructure* activemq::wireformat::openwire::marshal::v4::ActiveMQBlobMessageMarshaller::createObject(const commands::DataStructure&) const` [virtual]

Creates a new instance of this marshalable type.

Returns:

new DataStructure object pointer caller owns it.

Implements `activemq::wireformat::openwire::marshal::DataStreamMarshaller` (p. 1419).

6.12.3.2 `virtual unsigned char activemq::wireformat::openwire::marshal::v4::ActiveMQBlobMessageMarshaller::getDataStructureType() const` [virtual]

Get the Data Structure Type that identifies this Marshaler.

Returns:

byte holding the data structure type value

Implements `activemq::wireformat::openwire::marshal::DataStreamMarshaller` (p. 1424).

6.12.3.3 `virtual void activemq::wireformat::openwire::marshal::v4::ActiveMQBlobMessageMarshaller::looseMarshal(const commands::DataStructure&, const OpenWireFormat* wireFormat, commands::DataStructure* dataStructure, decaf::io::DataOutputStream* dataOut) throw (decaf::io::IOException)` [virtual]

Write a object instance to data output stream.

Parameters:

wireFormat - describes the wire format of the broker

dataStructure - Object to be marshaled

dataOut - BinaryWriter that provides that data sink

Exceptions:

IOException if an error occurs during the marshal.

Reimplemented from `activemq::wireformat::openwire::marshal::v4::MessageMarshaller` (p. 2311).

6.12.3.4 `virtual void activemq::wireformat::openwire::marshal::v4::ActiveMQBlobMessageMarshaller::looseUnmarshal(OpenWireFormat * wireFormat, commands::DataStructure * dataStructure, decaf::io::DataInputStream * dataIn) throw (decaf::io::IOException)` [virtual]

Un-marshall an object instance from the data input stream.

Parameters:

wireFormat - describes the wire format of the broker

dataStructure - Object to be marshaled

dataIn - BinaryReader that provides that data source

Exceptions:

IOException if an error occurs during the unmarshal.

Reimplemented from `activemq::wireformat::openwire::marshal::v4::MessageMarshaller` (p. 2311).

6.12.3.5 `virtual int activemq::wireformat::openwire::marshal::v4::ActiveMQBlobMessageMarshaller::tightMarshal(OpenWireFormat * wireFormat, commands::DataStructure * dataStructure, utils::BooleanStream * bs) throw (decaf::io::IOException)` [virtual]

Write the booleans that this object uses to a BooleanStream.

Parameters:

wireFormat - describes the wire format of the broker

dataStructure - Object to be marshaled

bs - BooleanStream stream used to pack bits from the wire.

Returns:

int value indicating the size of the marshaled object.

Exceptions:

IOException if an error occurs during the marshal.

Reimplemented from `activemq::wireformat::openwire::marshal::v4::MessageMarshaller` (p. 2312).

6.12.3.6 `virtual void activemq::wireformat::openwire::marshal::v4::ActiveMQBlobMessageMarshaller::tightMarshal (OpenWireFormat * wireFormat, commands::DataStructure * dataStructure, decaf::io::DataOutputStream * dataOut, utils::BooleanStream * bs) throw (decaf::io::IOException) [virtual]`

Write a object instance to data output stream.

Parameters:

wireFormat - describes the wire format of the broker
dataStructure - Object to be marshaled
dataOut - BinaryReader that provides that data sink
bs - BooleanStream stream used to pack bits from the wire.

Exceptions:

IOException if an error occurs during the marshal.

Reimplemented from `activemq::wireformat::openwire::marshal::v4::MessageMarshaller` (p. 2313).

6.12.3.7 `virtual void activemq::wireformat::openwire::marshal::v4::ActiveMQBlobMessageMarshaller::tightUnmarshal (OpenWireFormat * wireFormat, commands::DataStructure * dataStructure, decaf::io::DataInputStream * dataIn, utils::BooleanStream * bs) throw (decaf::io::IOException) [virtual]`

Un-marshall an object instance from the data input stream.

Parameters:

wireFormat - describes the wire format of the broker.
dataStructure - Object to be un-marshaled.
dataIn - BinaryReader that provides that data.
bs - BooleanStream stream used to unpack bits from the wire.

Exceptions:

IOException if an error occurs during the unmarshal.

Reimplemented from `activemq::wireformat::openwire::marshal::v4::MessageMarshaller` (p. 2313).

6.13.2.1 `activemq::wireformat::openwire::marshal::v5::ActiveMQBlobMessageMarshaller::ActiveMQBlobMessageMarshaller()` [inline]

6.13.2.2 `virtual activemq::wireformat::openwire::marshal::v5::ActiveMQBlobMessageMarshaller::~~ActiveMQBlobMessageMarshaller()` [inline, virtual]

6.13.3 Member Function Documentation

6.13.3.1 `virtual commands::DataStructure* activemq::wireformat::openwire::marshal::v5::ActiveMQBlobMessageMarshaller::createObject(const std::string& name) const` [virtual]

Creates a new instance of this marshalable type.

Returns:

new DataStructure object pointer caller owns it.

Implements `activemq::wireformat::openwire::marshal::DataStreamMarshaller` (p. 1419).

6.13.3.2 `virtual unsigned char activemq::wireformat::openwire::marshal::v5::ActiveMQBlobMessageMarshaller::getDataStructureType() const` [virtual]

Get the Data Structure Type that identifies this Marshaler.

Returns:

byte holding the data structure type value

Implements `activemq::wireformat::openwire::marshal::DataStreamMarshaller` (p. 1424).

6.13.3.3 `virtual void activemq::wireformat::openwire::marshal::v5::ActiveMQBlobMessageMarshaller::looseMarshal(const OpenWireFormat* wireFormat, commands::DataStructure* dataStructure, decaf::io::DataOutputStream* dataOut) throw (decaf::io::IOException)` [virtual]

Write a object instance to data output stream.

Parameters:

wireFormat - describes the wire format of the broker

dataStructure - Object to be marshaled

dataOut - BinaryWriter that provides that data sink

Exceptions:

IOException if an error occurs during the marshal.

Reimplemented from `activemq::wireformat::openwire::marshal::v5::MessageMarshaller` (p. 2321).

6.13.3.4 `virtual void activemq::wireformat::openwire::marshal::v5::ActiveMQBlobMessageMarshaller::looseUnmarshal(OpenWireFormat * wireFormat, commands::DataStructure * dataStructure, decaf::io::DataInputStream * dataIn) throw (decaf::io::IOException)` [virtual]

Un-marshall an object instance from the data input stream.

Parameters:

wireFormat - describes the wire format of the broker

dataStructure - Object to be marshaled

dataIn - BinaryReader that provides that data source

Exceptions:

IOException if an error occurs during the unmarshal.

Reimplemented from `activemq::wireformat::openwire::marshal::v5::MessageMarshaller` (p. 2321).

6.13.3.5 `virtual int activemq::wireformat::openwire::marshal::v5::ActiveMQBlobMessageMarshaller::tightMarshal(OpenWireFormat * wireFormat, commands::DataStructure * dataStructure, utils::BooleanStream * bs) throw (decaf::io::IOException)` [virtual]

Write the booleans that this object uses to a BooleanStream.

Parameters:

wireFormat - describes the wire format of the broker

dataStructure - Object to be marshaled

bs - BooleanStream stream used to pack bits from the wire.

Returns:

int value indicating the size of the marshaled object.

Exceptions:

IOException if an error occurs during the marshal.

Reimplemented from `activemq::wireformat::openwire::marshal::v5::MessageMarshaller` (p. 2322).

6.13.3.6 `virtual void activemq::wireformat::openwire::marshal::v5::ActiveMQBlobMessageMarshaller::tightMarshal(OpenWireFormat * wireFormat, commands::DataStructure * dataStructure, decaf::io::DataOutputStream * dataOut, utils::BooleanStream * bs) throw (decaf::io::IOException) [virtual]`

Write a object instance to data output stream.

Parameters:

wireFormat - describes the wire format of the broker
dataStructure - Object to be marshaled
dataOut - BinaryReader that provides that data sink
bs - BooleanStream stream used to pack bits from the wire.

Exceptions:

IOException if an error occurs during the marshal.

Reimplemented from `activemq::wireformat::openwire::marshal::v5::MessageMarshaller` (p. 2323).

6.13.3.7 `virtual void activemq::wireformat::openwire::marshal::v5::ActiveMQBlobMessageMarshaller::tightUnmarshal(OpenWireFormat * wireFormat, commands::DataStructure * dataStructure, decaf::io::DataInputStream * dataIn, utils::BooleanStream * bs) throw (decaf::io::IOException) [virtual]`

Un-marshal an object instance from the data input stream.

Parameters:

wireFormat - describes the wire format of the broker.
dataStructure - Object to be un-marshaled.
dataIn - BinaryReader that provides that data.
bs - BooleanStream stream used to unpack bits from the wire.

Exceptions:

IOException if an error occurs during the unmarshal.

Reimplemented from `activemq::wireformat::openwire::marshal::v5::MessageMarshaller` (p. 2323).

6.14.3 Member Function Documentation

6.14.3.1 `virtual commands::DataStructure* activemq::wireformat::openwire::marshal::v2::ActiveMQBlobMessageMarshaller::createObject(const commands::DataStructure& dataStructure) const` [virtual]

Creates a new instance of this marshalable type.

Returns:

new DataStructure object pointer caller owns it.

Implements `activemq::wireformat::openwire::marshal::DataStreamMarshaller` (p. 1419).

6.14.3.2 `virtual unsigned char activemq::wireformat::openwire::marshal::v2::ActiveMQBlobMessageMarshaller::getDataStructureType() const` [virtual]

Get the Data Structure Type that identifies this Marshaler.

Returns:

byte holding the data structure type value

Implements `activemq::wireformat::openwire::marshal::DataStreamMarshaller` (p. 1424).

6.14.3.3 `virtual void activemq::wireformat::openwire::marshal::v2::ActiveMQBlobMessageMarshaller::looseMarshal(const OpenWireFormat* wireFormat, commands::DataStructure* dataStructure, decaf::io::DataOutputStream* dataOut) throw (decaf::io::IOException)` [virtual]

Write a object instance to data output stream.

Parameters:

wireFormat - describes the wire format of the broker

dataStructure - Object to be marshaled

dataOut - BinaryWriter that provides that data sink

Exceptions:

IOException if an error occurs during the marshal.

Reimplemented from `activemq::wireformat::openwire::marshal::v2::MessageMarshaller` (p. 2306).

6.14.3.4 `virtual void activemq::wireformat::openwire::marshal::v2::ActiveMQBlobMessageMarshaller::looseUnmarshal(OpenWireFormat * wireFormat, commands::DataStructure * dataStructure, decaf::io::DataInputStream * dataIn) throw (decaf::io::IOException)` [virtual]

Un-marshall an object instance from the data input stream.

Parameters:

wireFormat - describes the wire format of the broker

dataStructure - Object to be marshaled

dataIn - BinaryReader that provides that data source

Exceptions:

IOException if an error occurs during the unmarshal.

Reimplemented from `activemq::wireformat::openwire::marshal::v2::MessageMarshaller` (p. 2306).

6.14.3.5 `virtual int activemq::wireformat::openwire::marshal::v2::ActiveMQBlobMessageMarshaller::tightMarshal(OpenWireFormat * wireFormat, commands::DataStructure * dataStructure, utils::BooleanStream * bs) throw (decaf::io::IOException)` [virtual]

Write the booleans that this object uses to a BooleanStream.

Parameters:

wireFormat - describes the wire format of the broker

dataStructure - Object to be marshaled

bs - BooleanStream stream used to pack bits from the wire.

Returns:

int value indicating the size of the marshaled object.

Exceptions:

IOException if an error occurs during the marshal.

Reimplemented from `activemq::wireformat::openwire::marshal::v2::MessageMarshaller` (p. 2307).

6.14.3.6 `virtual void activemq::wireformat::openwire::marshal::v2::ActiveMQBlobMessageMarshaller::tightMarshal(OpenWireFormat * wireFormat, commands::DataStructure * dataStructure, decaf::io::DataOutputStream * dataOut, utils::BooleanStream * bs) throw (decaf::io::IOException)` [virtual]

Write a object instance to data output stream.

Parameters:

wireFormat - describes the wire format of the broker
dataStructure - Object to be marshaled
dataOut - BinaryReader that provides that data sink
bs - BooleanStream stream used to pack bits from the wire.

Exceptions:

IOException if an error occurs during the marshal.

Reimplemented from `activemq::wireformat::openwire::marshal::v2::MessageMarshaller` (p. 2308).

6.14.3.7 `virtual void activemq::wireformat::openwire::marshal::v2::ActiveMQBlobMessageMarshaller::tightUnmarshal(OpenWireFormat * wireFormat, commands::DataStructure * dataStructure, decaf::io::DataInputStream * dataIn, utils::BooleanStream * bs) throw (decaf::io::IOException)` [virtual]

Un-marshall an object instance from the data input stream.

Parameters:

wireFormat - describes the wire format of the broker.
dataStructure - Object to be un-marshaled.
dataIn - BinaryReader that provides that data.
bs - BooleanStream stream used to unpack bits from the wire.

Exceptions:

IOException if an error occurs during the unmarshal.

Reimplemented from `activemq::wireformat::openwire::marshal::v2::MessageMarshaller` (p. 2308).

The documentation for this class was generated from the following file:

- `src/main/activemq/wireformat/openwire/marshal/v2/ActiveMQBlobMessageMarshaller.h`

6.15 activemq::commands::ActiveMQBytesMessage Class Reference

Public Member Functions

- **ActiveMQBytesMessage** ()
- virtual **~ActiveMQBytesMessage** ()
- virtual unsigned char **getDataStructureType** () const
Get the unique identifier that this object and its own Marshaler share.
- virtual **ActiveMQBytesMessage** * **cloneDataStructure** () const
Clone this object and return a new instance that the caller now owns, this will be an exact copy of this one.
- virtual void **copyDataStructure** (const **DataStructure** *src)
Copy the contents of the passed object into this objects members, overwriting any existing data.
- virtual std::string **toString** () const
*Returns a string containing the information for this **DataStructure** (p. 1461) such as its type and value of its elements.*
- virtual bool **equals** (const **DataStructure** *value) const
*Compares the **DataStructure** (p. 1461) passed in to this one, and returns if they are equivalent.*
- virtual **cms::BytesMessage** * **clone** () const
Clone this message exactly, returns a new instance that the caller is required to delete.
- virtual void **clearBody** () throw (cms::CMSException)
Clears out the body of the message.
- virtual void **onSend** ()
Store the Data that was written to the stream before a send.
- virtual void **setBodyBytes** (const unsigned char *buffer, std::size_t numBytes) throw (cms::MessageNotWriteableException, cms::CMSException)
sets the bytes given to the message body.
- virtual unsigned char * **getBodyBytes** () const throw (cms::MessageNotReadableException, cms::CMSException)
Gets the bytes that are contained in this message, user should copy this data into a user allocated buffer.
- virtual std::size_t **getBodyLength** () const throw (cms::MessageNotReadableException, cms::CMSException)
Returns the number of bytes contained in the body of this message.

- virtual void **reset** () throw (cms::MessageFormatException, cms::CMSEException)
Puts the message body in read-only mode and repositions the stream of bytes to the beginning.
- virtual bool **readBoolean** () const throw (cms::MessageEOFException, cms::MessageNotReadableException, cms::CMSEException)
Reads a Boolean from the Bytes message stream.
- virtual void **writeBoolean** (bool value) throw (cms::MessageNotWriteableException, cms::CMSEException)
Writes a boolean to the bytes message stream as a 1-byte value.
- virtual unsigned char **readByte** () const throw (cms::MessageEOFException, cms::MessageNotReadableException, cms::CMSEException)
Reads a Byte from the Bytes message stream.
- virtual void **writeByte** (unsigned char value) throw (cms::MessageNotWriteableException, cms::CMSEException)
Writes a byte to the bytes message stream as a 1-byte value.
- virtual std::size_t **readBytes** (std::vector< unsigned char > &value) const throw (cms::MessageEOFException, cms::MessageNotReadableException, cms::CMSEException)
Reads a byte array from the bytes message stream.
- virtual void **writeBytes** (const std::vector< unsigned char > &value) throw (cms::MessageNotWriteableException, cms::CMSEException)
Writes a byte array to the bytes message stream using the vector size as the number of bytes to write.
- virtual std::size_t **readBytes** (unsigned char *buffer, std::size_t length) const throw (cms::MessageEOFException, cms::MessageNotReadableException, cms::CMSEException)
Reads a portion of the bytes message stream.
- virtual void **writeBytes** (const unsigned char *value, std::size_t offset, std::size_t length) throw (cms::MessageNotWriteableException, cms::CMSEException)
Writes a portion of a byte array to the bytes message stream.
- virtual char **readChar** () const throw (cms::MessageEOFException, cms::MessageNotReadableException, cms::CMSEException)
Reads a Char from the Bytes message stream.
- virtual void **writeChar** (char value) throw (cms::MessageNotWriteableException, cms::CMSEException)
Writes a char to the bytes message stream as a 1-byte value.
- virtual float **readFloat** () const throw (cms::MessageEOFException, cms::MessageNotReadableException, cms::CMSEException)
Reads a 32 bit float from the Bytes message stream.
- virtual void **writeFloat** (float value) throw (cms::MessageNotWriteableException, cms::CMSEException)

Writes a float to the bytes message stream as a 4 byte value.

- virtual double **readDouble** () const throw (cms::MessageEOFException, cms::MessageNotReadableException, cms::CMSEException)

Reads a 64 bit double from the Bytes message stream.

- virtual void **writeDouble** (double value) throw (cms::MessageNotWriteableException, cms::CMSEException)

Writes a double to the bytes message stream as a 8 byte value.

- virtual short **readShort** () const throw (cms::MessageEOFException, cms::MessageNotReadableException, cms::CMSEException)

Reads a 16 bit signed short from the Bytes message stream.

- virtual void **writeShort** (short value) throw (cms::MessageNotWriteableException, cms::CMSEException)

Writes a signed short to the bytes message stream as a 2 byte value.

- virtual unsigned short **readUnsignedShort** () const throw (cms::MessageEOFException, cms::MessageNotReadableException, cms::CMSEException)

Reads a 16 bit unsigned short from the Bytes message stream.

- virtual void **writeUnsignedShort** (unsigned short value) throw (cms::MessageNotWriteableException, cms::CMSEException)

Writes a unsigned short to the bytes message stream as a 2 byte value.

- virtual int **readInt** () const throw (cms::MessageEOFException, cms::MessageNotReadableException, cms::CMSEException)

Reads a 32 bit signed integer from the Bytes message stream.

- virtual void **writeInt** (int value) throw (cms::MessageNotWriteableException, cms::CMSEException)

Writes a signed int to the bytes message stream as a 4 byte value.

- virtual long long **readLong** () const throw (cms::MessageEOFException, cms::MessageNotReadableException, cms::CMSEException)

Reads a 64 bit long from the Bytes message stream.

- virtual void **writeLong** (long long value) throw (cms::MessageNotWriteableException, cms::CMSEException)

Writes a long long to the bytes message stream as a 8 byte value.

- virtual std::string **readString** () const throw (cms::MessageEOFException, cms::MessageNotReadableException, cms::CMSEException)

Reads an ASCII String from the Bytes message stream.

- virtual void **writeString** (const std::string &value) throw (cms::MessageNotWriteableException, cms::CMSEException)

Writes an ASCII String to the Bytes message stream.

- virtual std::string **readUTF** () const throw (cms::MessageEOFException, cms::MessageNotReadableException, cms::CMSEException)
Reads an UTF String from the BytesMessage stream.
- virtual void **writeUTF** (const std::string &value) throw (cms::MessageNotWriteableException, cms::CMSEException)
Writes an UTF String to the BytesMessage stream.

Static Public Attributes

- static const unsigned char **ID _ACTIVEMQBYTESMESSAGE** = 24

6.15.1 Constructor & Destructor Documentation

6.15.1.1 `activemq::commands::ActiveMQBytesMessage::ActiveMQBytesMessage ()`

6.15.1.2 `virtual
activemq::commands::ActiveMQBytesMessage::~~ActiveMQBytesMessage
() [virtual]`

6.15.2 Member Function Documentation

6.15.2.1 `virtual void activemq::commands::ActiveMQBytesMessage::clearBody ()
throw (cms::CMSEException) [virtual]`

Clears out the body of the message. This does not clear the headers or properties.

Reimplemented from `activemq::commands::ActiveMQMessageTemplate< cms::BytesMessage >` (p. 368).

6.15.2.2 `virtual cms::BytesMessage* ac-
tivemq::commands::ActiveMQBytesMessage::clone () const
[inline, virtual]`

Clone this message exactly, returns a new instance that the caller is required to delete.

Returns:

new copy of this message

Implements `cms::BytesMessage` (p. 941).

6.15.2.3 `virtual ActiveMQBytesMessage* ac-
tivemq::commands::ActiveMQBytesMessage::cloneDataStructure () const
[virtual]`

Clone this object and return a new instance that the caller now owns, this will be an exact copy of this one.

Returns:

new copy of this object.

Reimplemented from `activemq::commands::Message` (p. 2149).

6.15.2.4 `virtual void activemq::commands::ActiveMQBytesMessage::copyDataStructure (const DataStructure * src) [virtual]`

Copy the contents of the passed object into this objects members, overwriting any existing data.

Returns:

src - Source Object

Reimplemented from `activemq::commands::Message` (p. 2150).

6.15.2.5 `virtual bool activemq::commands::ActiveMQBytesMessage::equals (const DataStructure * value) const [virtual]`

Compares the `DataStructure` (p. 1461) passed in to this one, and returns if they are equivalent. Equivalent here means that they are of the same type, and that each element of the objects are the same.

Parameters:

value The `Command` (p. 1063) to compare to this one.

Returns:

true if DataStructure's are Equal.

Reimplemented from `activemq::commands::ActiveMQMessageTemplate< cms::BytesMessage >` (p. 369).

6.15.2.6 `virtual unsigned char* activemq::commands::ActiveMQBytesMessage::getBodyBytes () const throw (cms::MessageNotReadableException, cms::CMSException) [virtual]`

Gets the bytes that are contained in this message, user should copy this data into a user allocated buffer. Call `getBodyLength` to determine the number of bytes to expect.

Returns:

const pointer to a byte buffer

Exceptions:

CMSException - If an internal error occurs.

MessageNotReadableException - If the message is in Write Only Mode.

Implements `cms::BytesMessage` (p. 941).

6.15.2.7 `virtual std::size_t activemq::commands::ActiveMQBytesMessage::getBodyLength () const throw (cms::MessageNotReadableException, cms::CMSException) [virtual]`

Returns the number of bytes contained in the body of this message.

Returns:

number of bytes.

Exceptions:

CMSException - If an internal error occurs.

MessageNotReadableException - If the message is in Write Only Mode.

Implements `cms::BytesMessage` (p. 942).

6.15.2.8 `virtual unsigned char activemq::commands::ActiveMQBytesMessage::getDataStructureType () const [virtual]`

Get the unique identifier that this object and its own Marshaler share.

Returns:

new `DataStructure` (p. 1461) type copy.

Reimplemented from `activemq::commands::Message` (p. 2152).

6.15.2.9 `virtual void activemq::commands::ActiveMQBytesMessage::onSend () [virtual]`

Store the Data that was written to the stream before a send.

Reimplemented from `activemq::commands::ActiveMQMessageTemplate< cms::BytesMessage >` (p. 376).

6.15.2.10 `virtual bool activemq::commands::ActiveMQBytesMessage::readBoolean () const throw (cms::MessageEOFException, cms::MessageNotReadableException, cms::CMSException) [virtual]`

Reads a Boolean from the Bytes message stream.

Returns:

boolean value from stream

Exceptions:

CMSException - if the CMS provider fails to read the message due to some internal error.

MessageEOFException - if unexpected end of bytes stream has been reached.

MessageNotReadableException - if the message is in write-only mode.

Implements `cms::BytesMessage` (p. 942).

6.15.2.11 `virtual unsigned char activemq::commands::ActiveMQBytesMessage::readByte() const throw (cms::MessageEOFException, cms::MessageNotReadableException, cms::CMSException) [virtual]`

Reads a Byte from the Bytes message stream.

Returns:

unsigned char value from stream

Exceptions:

CMSException - if the CMS provider fails to read the message due to some internal error.

MessageEOFException - if unexpected end of bytes stream has been reached.

MessageNotReadableException - if the message is in write-only mode.

Implements `cms::BytesMessage` (p. 942).

6.15.2.12 `virtual std::size_t activemq::commands::ActiveMQBytesMessage::readBytes(unsigned char * buffer, std::size_t length) const throw (cms::MessageEOFException, cms::MessageNotReadableException, cms::CMSException) [virtual]`

Reads a portion of the bytes message stream. If the length of array value is less than the number of bytes remaining to be read from the stream, the array should be filled. A subsequent call reads the next increment, and so on.

If the number of bytes remaining in the stream is less than the length of array value, the bytes should be read into the array. The return value of the total number of bytes read will be less than the length of the array, indicating that there are no more bytes left to be read from the stream. The next read of the stream returns -1.

If length is negative, or length is greater than the length of the array value, then an `IndexOutOfBoundsException` is thrown. No bytes will be read from the stream for this exception case.

Parameters:

buffer the buffer into which the data is read

length the number of bytes to read; must be less than or equal to value.length

Returns:

the total number of bytes read into the buffer, or -1 if there is no more data because the end of the stream has been reached

Exceptions:

CMSException - if the CMS provider fails to read the message due to some internal error.

MessageEOFException - if unexpected end of bytes stream has been reached.

MessageNotReadableException - if the message is in write-only mode.

Implements `cms::BytesMessage` (p. 943).

6.15.2.13 `virtual std::size_t activemq::commands::ActiveMQBytesMessage::readBytes (std::vector< unsigned char > & value) const throw (cms::MessageEOFException, cms::MessageNotReadableException, cms::CMSException) [virtual]`

Reads a byte array from the bytes message stream. If the length of vector value is less than the number of bytes remaining to be read from the stream, the vector should be filled. A subsequent call reads the next increment, and so on.

If the number of bytes remaining in the stream is less than the length of vector value, the bytes should be read into the vector. The return value of the total number of bytes read will be less than the length of the vector, indicating that there are no more bytes left to be read from the stream. The next read of the stream returns -1.

Parameters:

value buffer to place data in

Returns:

the total number of bytes read into the buffer, or -1 if there is no more data because the end of the stream has been reached

Exceptions:

CMSException - if the CMS provider fails to read the message due to some internal error.

MessageEOFException - if unexpected end of bytes stream has been reached.

MessageNotReadableException - if the message is in write-only mode.

Implements `cms::BytesMessage` (p. 943).

6.15.2.14 `virtual char activemq::commands::ActiveMQBytesMessage::readChar () const throw (cms::MessageEOFException, cms::MessageNotReadableException, cms::CMSException) [virtual]`

Reads a Char from the Bytes message stream.

Returns:

char value from stream

Exceptions:

CMSException - if the CMS provider fails to read the message due to some internal error.

MessageEOFException - if unexpected end of bytes stream has been reached.

MessageNotReadableException - if the message is in write-only mode.

Implements `cms::BytesMessage` (p. 944).

6.15.2.15 `virtual double activemq::commands::ActiveMQBytesMessage::readDouble () const throw (cms::MessageEOFException, cms::MessageNotReadableException, cms::CMSException) [virtual]`

Reads a 64 bit double from the Bytes message stream.

Returns:

double value from stream

Exceptions:

CMSException - if the CMS provider fails to read the message due to some internal error.

MessageEOFException - if unexpected end of bytes stream has been reached.

MessageNotReadableException - if the message is in write-only mode.

Implements **cms::BytesMessage** (p. 944).

6.15.2.16 virtual float activemq::commands::ActiveMQBytesMessage::readFloat
() const throw (cms::MessageEOFException,
cms::MessageNotReadableException, cms::CMSException) [virtual]

Reads a 32 bit float from the Bytes message stream.

Returns:

double value from stream

Exceptions:

CMSException - if the CMS provider fails to read the message due to some internal error.

MessageEOFException - if unexpected end of bytes stream has been reached.

MessageNotReadableException - if the message is in write-only mode.

Implements **cms::BytesMessage** (p. 945).

6.15.2.17 virtual int activemq::commands::ActiveMQBytesMessage::readInt
() const throw (cms::MessageEOFException,
cms::MessageNotReadableException, cms::CMSException) [virtual]

Reads a 32 bit signed integer from the Bytes message stream.

Returns:

int value from stream

Exceptions:

CMSException - if the CMS provider fails to read the message due to some internal error.

MessageEOFException - if unexpected end of bytes stream has been reached.

MessageNotReadableException - if the message is in write-only mode.

Implements **cms::BytesMessage** (p. 945).

6.15.2.18 virtual long long ac-
tivismq::commands::ActiveMQBytesMessage::readLong
() const throw (cms::MessageEOFException,
cms::MessageNotReadableException, cms::CMSException) [virtual]

Reads a 64 bit long from the Bytes message stream.

Returns:

long long value from stream

Exceptions:

CMSEException - if the CMS provider fails to read the message due to some internal error.

MessageEOFException - if unexpected end of bytes stream has been reached.

MessageNotReadableException - if the message is in write-only mode.

Implements **cms::BytesMessage** (p. 945).

6.15.2.19 virtual short activemq::commands::ActiveMQBytesMessage::readShort
() const throw (cms::MessageEOFException,
cms::MessageNotReadableException, cms::CMSEException) [virtual]

Reads a 16 bit signed short from the Bytes message stream.

Returns:

short value from stream

Exceptions:

CMSEException - if the CMS provider fails to read the message due to some internal error.

MessageEOFException - if unexpected end of bytes stream has been reached.

MessageNotReadableException - if the message is in write-only mode.

Implements **cms::BytesMessage** (p. 946).

6.15.2.20 virtual std::string ac-
tivismq::commands::ActiveMQBytesMessage::readString
() const throw (cms::MessageEOFException,
cms::MessageNotReadableException, cms::CMSEException) [virtual]

Reads an ASCII String from the Bytes message stream.

Returns:

String from stream

Exceptions:

CMSEException - if the CMS provider fails to read the message due to some internal error.

MessageEOFException - if unexpected end of bytes stream has been reached.

MessageNotReadableException - if the message is in write-only mode.

Implements **cms::BytesMessage** (p. 946).

6.15.2.21 virtual unsigned short activemq::commands::ActiveMQBytesMessage::readUnsignedShort
() const throw (cms::MessageEOFException,
cms::MessageNotReadableException, cms::CMSException) [virtual]

Reads a 16 bit unsigned short from the Bytes message stream.

Returns:

unsigned short value from stream

Exceptions:

CMSException - if the CMS provider fails to read the message due to some internal error.

MessageEOFException - if unexpected end of bytes stream has been reached.

MessageNotReadableException - if the message is in write-only mode.

Implements cms::BytesMessage (p. 946).

6.15.2.22 virtual std::string activemq::commands::ActiveMQBytesMessage::readUTF
() const throw (cms::MessageEOFException,
cms::MessageNotReadableException, cms::CMSException) [virtual]

Reads an UTF String from the BytesMessage stream.

Returns:

String from stream

Exceptions:

CMSException - if the CMS provider fails to read the message due to some internal error.

MessageEOFException - if unexpected end of bytes stream has been reached.

MessageNotReadableException - if the message is in write-only mode.

Implements cms::BytesMessage (p. 947).

6.15.2.23 virtual void activemq::commands::ActiveMQBytesMessage::reset ()
throw (cms::MessageFormatException, cms::CMSException) [virtual]

Puts the message body in read-only mode and repositions the stream of bytes to the beginning.

Exceptions:

CMSException - If the provider fails to perform the reset operation.

MessageFormatException - If the Message (p. 2145) has an invalid format.

Implements cms::BytesMessage (p. 947).

6.15.2.24 `virtual void activemq::commands::ActiveMQBytesMessage::setBodyBytes (const unsigned char * buffer, std::size_t numBytes) throw (cms::MessageNotWriteableException, cms::CMSEException) [virtual]`

sets the bytes given to the message body.

Parameters:

buffer Byte Buffer to copy

numBytes Number of bytes in Buffer to copy

Exceptions:

CMSEException - If an internal error occurs.

MessageNotWriteableException - if in Read Only Mode.

Implements `cms::BytesMessage` (p. 947).

6.15.2.25 `virtual std::string activemq::commands::ActiveMQBytesMessage::toString () const [virtual]`

Returns a string containing the information for this **DataStructure** (p. 1461) such as its type and value of its elements.

Returns:

formatted string useful for debugging.

Reimplemented from `activemq::commands::Message` (p. 2159).

6.15.2.26 `virtual void activemq::commands::ActiveMQBytesMessage::writeBoolean (bool value) throw (cms::MessageNotWriteableException, cms::CMSEException) [virtual]`

Writes a boolean to the bytes message stream as a 1-byte value. The value true is written as the value (byte)1; the value false is written as the value (byte)0.

Parameters:

value boolean to write to the stream

Exceptions:

CMSEException - if the CMS provider fails to write the message due to some internal error.

MessageNotWriteableException - if the message is in read-only mode.

Implements `cms::BytesMessage` (p. 948).

6.15.2.27 `virtual void activemq::commands::ActiveMQBytesMessage::writeByte (unsigned char value) throw (cms::MessageNotWriteableException, cms::CMSEException) [virtual]`

Writes a byte to the bytes message stream as a 1-byte value.

Parameters:

value byte to write to the stream

Exceptions:

CMSException - if the CMS provider fails to write the message due to some internal error.

MessageNotWriteableException - if the message is in read-only mode.

Implements **cms::BytesMessage** (p. 948).

6.15.2.28 `virtual void activemq::commands::ActiveMQBytesMessage::writeBytes
(const unsigned char * value, std::size_t offset, std::size_t length) throw
(cms::MessageNotWriteableException, cms::CMSException) [virtual]`

Writes a portion of a byte array to the bytes message stream. size as the number of bytes to write.

Parameters:

value bytes to write to the stream

offset the initial offset within the byte array

length the number of bytes to use

Exceptions:

CMSException - if the CMS provider fails to write the message due to some internal error.

MessageNotWriteableException - if the message is in read-only mode.

Implements **cms::BytesMessage** (p. 948).

6.15.2.29 `virtual void activemq::commands::ActiveMQBytesMessage::writeBytes
(const std::vector< unsigned char > & value) throw (
cms::MessageNotWriteableException, cms::CMSException) [virtual]`

Writes a byte array to the bytes message stream using the vector size as the number of bytes to write.

Parameters:

value bytes to write to the stream

Exceptions:

CMSException - if the CMS provider fails to write the message due to some internal error.

MessageNotWriteableException - if the message is in read-only mode.

Implements **cms::BytesMessage** (p. 949).

6.15.2.30 `virtual void activemq::commands::ActiveMQBytesMessage::writeChar
(char value) throw (cms::MessageNotWriteableException,
cms::CMSException) [virtual]`

Writes a char to the bytes message stream as a 1-byte value.

Parameters:

value char to write to the stream

Exceptions:

CMSEException - if the CMS provider fails to write the message due to some internal error.

MessageNotWriteableException - if the message is in read-only mode.

Implements **cms::BytesMessage** (p. 949).

6.15.2.31 virtual void activemq::commands::ActiveMQBytesMessage::writeDouble
(double *value*) throw (cms::MessageNotWriteableException,
cms::CMSEException) [virtual]

Writes a double to the bytes message stream as a 8 byte value.

Parameters:

value double to write to the stream

Exceptions:

CMSEException - if the CMS provider fails to write the message due to some internal error.

MessageNotWriteableException - if the message is in read-only mode.

Implements **cms::BytesMessage** (p. 949).

6.15.2.32 virtual void activemq::commands::ActiveMQBytesMessage::writeFloat
(float *value*) throw (cms::MessageNotWriteableException,
cms::CMSEException) [virtual]

Writes a float to the bytes message stream as a 4 byte value.

Parameters:

value float to write to the stream

Exceptions:

CMSEException - if the CMS provider fails to write the message due to some internal error.

MessageNotWriteableException - if the message is in read-only mode.

Implements **cms::BytesMessage** (p. 950).

6.15.2.33 virtual void activemq::commands::ActiveMQBytesMessage::writeInt (int
value) throw (cms::MessageNotWriteableException, cms::CMSEException
) [virtual]

Writes a signed int to the bytes message stream as a 4 byte value.

Parameters:

value signed int to write to the stream

Exceptions:

CMSException - if the CMS provider fails to write the message due to some internal error.

MessageNotWriteableException - if the message is in read-only mode.

Implements **cms::BytesMessage** (p. 950).

6.15.2.34 virtual void activemq::commands::ActiveMQBytesMessage::writeLong
(long long *value*) throw (cms::MessageNotWriteableException,
cms::CMSException) [virtual]

Writes a long long to the bytes message stream as a 8 byte value.

Parameters:

value signed long long to write to the stream

Exceptions:

CMSException - if the CMS provider fails to write the message due to some internal error.

MessageNotWriteableException - if the message is in read-only mode.

Implements **cms::BytesMessage** (p. 950).

6.15.2.35 virtual void activemq::commands::ActiveMQBytesMessage::writeShort
(short *value*) throw (cms::MessageNotWriteableException,
cms::CMSException) [virtual]

Writes a signed short to the bytes message stream as a 2 byte value.

Parameters:

value signed short to write to the stream

Exceptions:

CMSException - if the CMS provider fails to write the message due to some internal error.

MessageNotWriteableException - if the message is in read-only mode.

Implements **cms::BytesMessage** (p. 951).

6.15.2.36 virtual void activemq::commands::ActiveMQBytesMessage::writeString
(const std::string & *value*) throw (cms::MessageNotWriteableException,
cms::CMSException) [virtual]

Writes an ASCII String to the Bytes message stream.

Parameters:

value String to write to the stream

Exceptions:

CMSException - if the CMS provider fails to write the message due to some internal error.

MessageNotWriteableException - if the message is in read-only mode.

Implements **cms::BytesMessage** (p. 951).

6.15.2.37 virtual void activemq::commands::ActiveMQBytesMessage::writeUnsignedShort (unsigned short *value*) throw (cms::MessageNotWriteableException, cms::CMSException) [virtual]

Writes a unsigned short to the bytes message stream as a 2 byte value.

Parameters:

value unsigned short to write to the stream

Exceptions:

CMSException - if the CMS provider fails to write the message due to some internal error.

MessageNotWriteableException - if the message is in read-only mode.

Implements cms::BytesMessage (p. 951).

6.15.2.38 virtual void activemq::commands::ActiveMQBytesMessage::writeUTF (const std::string & *value*) throw (cms::MessageNotWriteableException, cms::CMSException) [virtual]

Writes an UTF String to the BytesMessage stream.

Parameters:

value String to write to the stream

Exceptions:

CMSException - if the CMS provider fails to read the message due to some internal error.

MessageEOFException - if unexpected end of bytes stream has been reached.

MessageNotReadableException - if the message is in write-only mode.

Implements cms::BytesMessage (p. 952).

6.15.3 Field Documentation

Write the booleans that this object uses to a BooleanStream.
- `virtual void tightMarshal2 (OpenWireFormat *wireFormat, commands::DataStructure *dataStructure, decaf::io::DataOutputStream *dataOut, utils::BooleanStream *bs) throw (decaf::io::IOException)`
Write a object instance to data output stream.
- `virtual void looseUnmarshal (OpenWireFormat *wireFormat, commands::DataStructure *dataStructure, decaf::io::DataInputStream *dataIn) throw (decaf::io::IOException)`
Un-marshal an object instance from the data input stream.
- `virtual void looseMarshal (OpenWireFormat *wireFormat, commands::DataStructure *dataStructure, decaf::io::DataOutputStream *dataOut) throw (decaf::io::IOException)`
Write a object instance to data output stream.

6.16.1 Detailed Description

Marshaling code for Open Wire Format for `ActiveMQBytesMessageMarshaller` (p. 213).

NOTE!: This file is auto generated - do not modify! if you need to make a change, please see the Java Classes in the `activemq-openwire-generator` module

6.16.2 Constructor & Destructor Documentation

6.16.2.1 `activemq::wireformat::openwire::marshal::v3::ActiveMQBytesMessageMarshaller::ActiveMQBytesMessageMarshaller()` [inline]

6.16.2.2 `virtual activemq::wireformat::openwire::marshal::v3::ActiveMQBytesMessageMarshaller::~~ActiveMQBytesMessageMarshaller()` [inline, virtual]

6.16.3 Member Function Documentation

6.16.3.1 `virtual commands::DataStructure* activemq::wireformat::openwire::marshal::v3::ActiveMQBytesMessageMarshaller::createObject()` const [virtual]

Creates a new instance of this marshalable type.

Returns:

new DataStructure object pointer caller owns it.

Implements `activemq::wireformat::openwire::marshal::DataStreamMarshaller` (p. 1419).

6.16.3.2 `virtual unsigned char activemq::wireformat::openwire::marshal::v3::ActiveMQBytesMessageMarshaller::getDataStructureType()` const [virtual]

Get the Data Structure Type that identifies this Marshaler.

Returns:

byte holding the data structure type value

Implements `activemq::wireformat::openwire::marshal::DataStreamMarshaller` (p. 1424).

6.16.3.3 `virtual void activemq::wireformat::openwire::marshal::v3::ActiveMQBytesMessageMarshaller::looseMarshal(commands::DataStructure* dataStructure, decaf::io::DataOutputStream* dataOut) throw (decaf::io::IOException)` [virtual]

Write a object instance to data output stream.

Parameters:

wireFormat - describes the wire format of the broker

dataStructure - Object to be marshaled

dataOut - BinaryWriter that provides that data sink

Exceptions:

IOException if an error occurs during the marshal.

6.16

activemq::wireformat::openwire::marshal::v3::ActiveMQBytesMessageMarshaller

Class Reference

217

Reimplemented from **activemq::wireformat::openwire::marshal::v3::MessageMarshaller** (p. 2316).

6.16.3.4 virtual void ac-

```
ativemq::wireformat::openwire::marshal::v3::ActiveMQBytesMessageMarshaller::looseUnmarshal(
    OpenWireFormat * wireFormat, commands::DataStructure *
    dataStructure, decaf::io::DataInputStream * dataIn) throw (
    decaf::io::IOException ) [virtual]
```

Un-marshall an object instance from the data input stream.

Parameters:

wireFormat - describes the wire format of the broker

dataStructure - Object to be marshaled

dataIn - BinaryReader that provides that data source

Exceptions:

IOException if an error occurs during the unmarshal.

Reimplemented from **activemq::wireformat::openwire::marshal::v3::MessageMarshaller** (p. 2316).

6.16.3.5 virtual int ac-

```
ativemq::wireformat::openwire::marshal::v3::ActiveMQBytesMessageMarshaller::tightMarshal(
    OpenWireFormat * wireFormat, commands::DataStructure *
    dataStructure, utils::BooleanStream * bs) throw ( decaf::io::IOException )
[virtual]
```

Write the booleans that this object uses to a BooleanStream.

Parameters:

wireFormat - describes the wire format of the broker

dataStructure - Object to be marshaled

bs - BooleanStream stream used to pack bits from the wire.

Returns:

int value indicating the size of the marshaled object.

Exceptions:

IOException if an error occurs during the marshal.

Reimplemented from **activemq::wireformat::openwire::marshal::v3::MessageMarshaller** (p. 2317).

6.16.3.6 `virtual void activemq::wireformat::openwire::marshal::v3::ActiveMQBytesMessageMarshaller::tightMarshal(OpenWireFormat * wireFormat, commands::DataStructure * dataStructure, decaf::io::DataOutputStream * dataOut, utils::BooleanStream * bs) throw (decaf::io::IOException)` [virtual]

Write a object instance to data output stream.

Parameters:

wireFormat - describes the wire format of the broker
dataStructure - Object to be marshaled
dataOut - BinaryReader that provides that data sink
bs - BooleanStream stream used to pack bits from the wire.

Exceptions:

IOException if an error occurs during the marshal.

Reimplemented from `activemq::wireformat::openwire::marshal::v3::MessageMarshaller` (p. 2318).

6.16.3.7 `virtual void activemq::wireformat::openwire::marshal::v3::ActiveMQBytesMessageMarshaller::tightUnmarshal(OpenWireFormat * wireFormat, commands::DataStructure * dataStructure, decaf::io::DataInputStream * dataIn, utils::BooleanStream * bs) throw (decaf::io::IOException)` [virtual]

Un-marshall an object instance from the data input stream.

Parameters:

wireFormat - describes the wire format of the broker.
dataStructure - Object to be un-marshaled.
dataIn - BinaryReader that provides that data.
bs - BooleanStream stream used to unpack bits from the wire.

Exceptions:

IOException if an error occurs during the unmarshal.

Reimplemented from `activemq::wireformat::openwire::marshal::v3::MessageMarshaller` (p. 2318).

    OpenWireFormat * wireFormat, commands::DataStructure *
    dataStructure, utils::BooleanStream * bs) throw ( decaf::io::IOException )
[virtual]
```

Write the booleans that this object uses to a BooleanStream.

Parameters:

wireFormat - describes the wire format of the broker

dataStructure - Object to be marshaled

bs - BooleanStream stream used to pack bits from the wire.

Returns:

int value indicating the size of the marshaled object.

Exceptions:

IOException if an error occurs during the marshal.

Reimplemented from **activemq::wireformat::openwire::marshal::v1::MessageMarshaller** (p. 2327).

6.17.3.6 `virtual void activemq::wireformat::openwire::marshal::v1::ActiveMQBytesMessageMarshaller::tightMarshal(OpenWireFormat * wireFormat, commands::DataStructure * dataStructure, decaf::io::DataOutputStream * dataOut, utils::BooleanStream * bs) throw (decaf::io::IOException)` [virtual]

Write a object instance to data output stream.

Parameters:

wireFormat - describes the wire format of the broker
dataStructure - Object to be marshaled
dataOut - BinaryReader that provides that data sink
bs - BooleanStream stream used to pack bits from the wire.

Exceptions:

IOException if an error occurs during the marshal.

Reimplemented from `activemq::wireformat::openwire::marshal::v1::MessageMarshaller` (p. 2328).

6.17.3.7 `virtual void activemq::wireformat::openwire::marshal::v1::ActiveMQBytesMessageMarshaller::tightUnmarshal(OpenWireFormat * wireFormat, commands::DataStructure * dataStructure, decaf::io::DataInputStream * dataIn, utils::BooleanStream * bs) throw (decaf::io::IOException)` [virtual]

Un-marshall an object instance from the data input stream.

Parameters:

wireFormat - describes the wire format of the broker.
dataStructure - Object to be un-marshaled.
dataIn - BinaryReader that provides that data.
bs - BooleanStream stream used to unpack bits from the wire.

Exceptions:

IOException if an error occurs during the unmarshal.

    OpenWireFormat * wireFormat, commands::DataStructure *
    dataStructure, utils::BooleanStream * bs) throw ( decaf::io::IOException )
[virtual]
```

Write the booleans that this object uses to a BooleanStream.

Parameters:

wireFormat - describes the wire format of the broker

dataStructure - Object to be marshaled

bs - BooleanStream stream used to pack bits from the wire.

Returns:

int value indicating the size of the marshaled object.

Exceptions:

IOException if an error occurs during the marshal.

Reimplemented from **activemq::wireformat::openwire::marshal::v4::MessageMarshaller** (p. 2312).

6.18.3.6 `virtual void activemq::wireformat::openwire::marshal::v4::ActiveMQBytesMessageMarshaller::tightMarshal(OpenWireFormat * wireFormat, commands::DataStructure * dataStructure, decaf::io::DataOutputStream * dataOut, utils::BooleanStream * bs) throw (decaf::io::IOException) [virtual]`

Write a object instance to data output stream.

Parameters:

wireFormat - describes the wire format of the broker
dataStructure - Object to be marshaled
dataOut - BinaryReader that provides that data sink
bs - BooleanStream stream used to pack bits from the wire.

Exceptions:

IOException if an error occurs during the marshal.

Reimplemented from `activemq::wireformat::openwire::marshal::v4::MessageMarshaller` (p. 2313).

6.18.3.7 `virtual void activemq::wireformat::openwire::marshal::v4::ActiveMQBytesMessageMarshaller::tightUnmarshal(OpenWireFormat * wireFormat, commands::DataStructure * dataStructure, decaf::io::DataInputStream * dataIn, utils::BooleanStream * bs) throw (decaf::io::IOException) [virtual]`

Un-marshal an object instance from the data input stream.

Parameters:

wireFormat - describes the wire format of the broker.
dataStructure - Object to be un-marshaled.
dataIn - BinaryReader that provides that data.
bs - BooleanStream stream used to unpack bits from the wire.

Exceptions:

IOException if an error occurs during the unmarshal.

6.19.3.1 `virtual commands::DataStructure* activemq::wireformat::openwire::marshal::v5::ActiveMQBytesMessageMarshaller::createObject(const commands::DataStructure& dataStructure) const` [virtual]

Creates a new instance of this marshalable type.

Returns:

new DataStructure object pointer caller owns it.

Implements `activemq::wireformat::openwire::marshal::DataStreamMarshaller` (p. 1419).

6.19.3.2 `virtual unsigned char activemq::wireformat::openwire::marshal::v5::ActiveMQBytesMessageMarshaller::getDataStructureType() const` [virtual]

Get the Data Structure Type that identifies this Marshaler.

Returns:

byte holding the data structure type value

Implements `activemq::wireformat::openwire::marshal::DataStreamMarshaller` (p. 1424).

6.19.3.3 `virtual void activemq::wireformat::openwire::marshal::v5::ActiveMQBytesMessageMarshaller::looseMarshal(const commands::DataStructure* dataStructure, decaf::io::DataOutputStream* dataOut) throw (decaf::io::IOException)` [virtual]

Write a object instance to data output stream.

Parameters:

wireFormat - describes the wire format of the broker

dataStructure - Object to be marshaled

dataOut - BinaryWriter that provides that data sink

Exceptions:

IOException if an error occurs during the marshal.

6.19

activemq::wireformat::openwire::marshal::v5::ActiveMQBytesMessageMarshaller

Class Reference

229

Reimplemented from **activemq::wireformat::openwire::marshal::v5::MessageMarshaller** (p. 2321).

6.19.3.4 virtual void ac-

```
timemq::wireformat::openwire::marshal::v5::ActiveMQBytesMessageMarshaller::looseUnmarshal(
    OpenWireFormat * wireFormat, commands::DataStructure *
    dataStructure, decaf::io::DataInputStream * dataIn) throw (
    decaf::io::IOException ) [virtual]
```

Un-marshall an object instance from the data input stream.

Parameters:

wireFormat - describes the wire format of the broker

dataStructure - Object to be marshaled

dataIn - BinaryReader that provides that data source

Exceptions:

IOException if an error occurs during the unmarshal.

Reimplemented from **activemq::wireformat::openwire::marshal::v5::MessageMarshaller** (p. 2321).

6.19.3.5 virtual int ac-

```
timemq::wireformat::openwire::marshal::v5::ActiveMQBytesMessageMarshaller::tightMarshal(
    OpenWireFormat * wireFormat, commands::DataStructure *
    dataStructure, utils::BooleanStream * bs) throw ( decaf::io::IOException )
[virtual]
```

Write the booleans that this object uses to a BooleanStream.

Parameters:

wireFormat - describes the wire format of the broker

dataStructure - Object to be marshaled

bs - BooleanStream stream used to pack bits from the wire.

Returns:

int value indicating the size of the marshaled object.

Exceptions:

IOException if an error occurs during the marshal.

Reimplemented from **activemq::wireformat::openwire::marshal::v5::MessageMarshaller** (p. 2322).

6.19.3.6 `virtual void activemq::wireformat::openwire::marshal::v5::ActiveMQBytesMessageMarshaller::tightMarshal(OpenWireFormat * wireFormat, commands::DataStructure * dataStructure, decaf::io::DataOutputStream * dataOut, utils::BooleanStream * bs) throw (decaf::io::IOException) [virtual]`

Write a object instance to data output stream.

Parameters:

wireFormat - describes the wire format of the broker
dataStructure - Object to be marshaled
dataOut - BinaryReader that provides that data sink
bs - BooleanStream stream used to pack bits from the wire.

Exceptions:

IOException if an error occurs during the marshal.

Reimplemented from `activemq::wireformat::openwire::marshal::v5::MessageMarshaller` (p. 2323).

6.19.3.7 `virtual void activemq::wireformat::openwire::marshal::v5::ActiveMQBytesMessageMarshaller::tightUnmarshal(OpenWireFormat * wireFormat, commands::DataStructure * dataStructure, decaf::io::DataInputStream * dataIn, utils::BooleanStream * bs) throw (decaf::io::IOException) [virtual]`

Un-marshal an object instance from the data input stream.

Parameters:

wireFormat - describes the wire format of the broker.
dataStructure - Object to be un-marshaled.
dataIn - BinaryReader that provides that data.
bs - BooleanStream stream used to unpack bits from the wire.

Exceptions:

IOException if an error occurs during the unmarshal.

Reimplemented from `activemq::wireformat::openwire::marshal::v5::MessageMarshaller` (p. 2323).

The documentation for this class was generated from the following file:

- `src/main/activemq/wireformat/openwire/marshal/v5/ActiveMQBytesMessageMarshaller.h`

Un-marshal an object instance from the data input stream.
- virtual void **looseMarshal** (**OpenWireFormat *wireFormat**, **commands::DataStructure *dataStructure**, **decaf::io::DataOutputStream *dataOut**) throw (**decaf::io::IOException**)
Write a object instance to data output stream.

6.20.1 Detailed Description

Marshaling code for Open Wire Format for **ActiveMQBytesMessageMarshaller** (p. 229).

NOTE!: This file is auto generated - do not modify! if you need to make a change, please see the Java Classes in the activemq-openwire-generator module

6.20.2 Constructor & Destructor Documentation

6.20.2.1 `activemq::wireformat::openwire::marshal::v2::ActiveMQBytesMessageMarshaller::ActiveMQBytesMessageMarshaller()` [inline]

6.20.2.2 `virtual activemq::wireformat::openwire::marshal::v2::ActiveMQBytesMessageMarshaller::~~ActiveMQBytesMessageMarshaller()` [inline, virtual]

6.20.3 Member Function Documentation

6.20.3.1 `virtual commands::DataStructure* activemq::wireformat::openwire::marshal::v2::ActiveMQBytesMessageMarshaller::createObject(const std::string& name) const` [virtual]

Creates a new instance of this marshalable type.

Returns:

new DataStructure object pointer caller owns it.

Implements `activemq::wireformat::openwire::marshal::DataStreamMarshaller` (p. 1419).

6.20.3.2 `virtual unsigned char activemq::wireformat::openwire::marshal::v2::ActiveMQBytesMessageMarshaller::getDataStructureType() const` [virtual]

Get the Data Structure Type that identifies this Marshaler.

Returns:

byte holding the data structure type value

Implements `activemq::wireformat::openwire::marshal::DataStreamMarshaller` (p. 1424).

6.20.3.3 `virtual void activemq::wireformat::openwire::marshal::v2::ActiveMQBytesMessageMarshaller::looseMarshal(const commands::DataStructure* dataStructure, decaf::io::DataOutputStream* dataOut) throw (decaf::io::IOException)` [virtual]

Write a object instance to data output stream.

Parameters:

wireFormat - describes the wire format of the broker

dataStructure - Object to be marshaled

dataOut - BinaryWriter that provides that data sink

Exceptions:

IOException if an error occurs during the marshal.

6.20

activemq::wireformat::openwire::marshal::v2::ActiveMQBytesMessageMarshaller

Class Reference

233

Reimplemented from **activemq::wireformat::openwire::marshal::v2::MessageMarshaller** (p. 2306).

6.20.3.4 virtual void ac-

```
ativemq::wireformat::openwire::marshal::v2::ActiveMQBytesMessageMarshaller::looseUnmarshal(
    OpenWireFormat * wireFormat, commands::DataStructure *
    dataStructure, decaf::io::DataInputStream * dataIn) throw (
    decaf::io::IOException ) [virtual]
```

Un-marshall an object instance from the data input stream.

Parameters:

wireFormat - describes the wire format of the broker

dataStructure - Object to be marshaled

dataIn - BinaryReader that provides that data source

Exceptions:

IOException if an error occurs during the unmarshal.

Reimplemented from **activemq::wireformat::openwire::marshal::v2::MessageMarshaller** (p. 2306).

6.20.3.5 virtual int ac-

```
ativemq::wireformat::openwire::marshal::v2::ActiveMQBytesMessageMarshaller::tightMarshal(
    OpenWireFormat * wireFormat, commands::DataStructure *
    dataStructure, utils::BooleanStream * bs) throw ( decaf::io::IOException )
[virtual]
```

Write the booleans that this object uses to a BooleanStream.

Parameters:

wireFormat - describes the wire format of the broker

dataStructure - Object to be marshaled

bs - BooleanStream stream used to pack bits from the wire.

Returns:

int value indicating the size of the marshaled object.

Exceptions:

IOException if an error occurs during the marshal.

Reimplemented from **activemq::wireformat::openwire::marshal::v2::MessageMarshaller** (p. 2307).

6.20.3.6 `virtual void activemq::wireformat::openwire::marshal::v2::ActiveMQBytesMessageMarshaller::tightMarshal(OpenWireFormat * wireFormat, commands::DataStructure * dataStructure, decaf::io::DataOutputStream * dataOut, utils::BooleanStream * bs) throw (decaf::io::IOException) [virtual]`

Write a object instance to data output stream.

Parameters:

wireFormat - describes the wire format of the broker
dataStructure - Object to be marshaled
dataOut - BinaryReader that provides that data sink
bs - BooleanStream stream used to pack bits from the wire.

Exceptions:

IOException if an error occurs during the marshal.

Reimplemented from `activemq::wireformat::openwire::marshal::v2::MessageMarshaller` (p. 2308).

6.20.3.7 `virtual void activemq::wireformat::openwire::marshal::v2::ActiveMQBytesMessageMarshaller::tightUnmarshal(OpenWireFormat * wireFormat, commands::DataStructure * dataStructure, decaf::io::DataInputStream * dataIn, utils::BooleanStream * bs) throw (decaf::io::IOException) [virtual]`

Un-marshal an object instance from the data input stream.

Parameters:

wireFormat - describes the wire format of the broker.
dataStructure - Object to be un-marshaled.
dataIn - BinaryReader that provides that data.
bs - BooleanStream stream used to unpack bits from the wire.

Exceptions:

IOException if an error occurs during the unmarshal.

Reimplemented from `activemq::wireformat::openwire::marshal::v2::MessageMarshaller` (p. 2308).

The documentation for this class was generated from the following file:

- `src/main/activemq/wireformat/openwire/marshal/v2/ActiveMQBytesMessageMarshaller.h`

6.21 activemq::core::ActiveMQConnection Class Reference

Concrete connection used for all connectors to the ActiveMQ broker.

#include <src/main/activemq/core/ActiveMQConnection.h> Inheritance diagram for activemq::core::ActiveMQConnection:

Public Member Functions

- **ActiveMQConnection** (const **Pointer**< **transport::Transport** > &transport, const **Pointer**< **decaf::util::Properties** > &properties)
Constructor.
- virtual ~**ActiveMQConnection** ()
- virtual void **removeSession** (**ActiveMQSession** *session) throw (cms::CMSException)
Removes the session resources for the given session instance.
- virtual void **addProducer** (**ActiveMQProducer** *producer) throw (cms::CMSException)
Adds an active Producer to the Set of known producers.
- virtual void **removeProducer** (const **Pointer**< **commands::ProducerId** > &producerId) throw (cms::CMSException)
Removes an active Producer to the Set of known producers.
- virtual void **addDispatcher** (const **Pointer**< **commands::ConsumerId** > &consumer, **Dispatcher** *dispatcher) throw (cms::CMSException)
Adds a dispatcher for a consumer.
- virtual void **removeDispatcher** (const **Pointer**< **commands::ConsumerId** > &consumer) throw (cms::CMSException)
Removes the dispatcher for a consumer.
- virtual void **sendPullRequest** (const **commands::ConsumerInfo** *consumer, long long timeout) throw (exceptions::ActiveMQException)
If supported sends a message pull request to the service provider asking for the delivery of a new message.
- bool **isClosed** () const
Checks if this connection has been closed.
- bool **isStarted** () const
Check if this connection has been started.
- virtual void **destroyDestination** (const **commands::ActiveMQDestination** *destination) throw (decaf::lang::exceptions::NullPointerException, decaf::lang::exceptions::IllegalStateException, decaf::lang::exceptions::UnsupportedOperationException, activemq::exceptions::ActiveMQException)

Requests that the Broker removes the given Destination.

- virtual void **destroyDestination** (const **cms::Destination** *destination) throw (decaf::lang::exceptions::NullPointerException, decaf::lang::exceptions::IllegalStateException, decaf::lang::exceptions::UnsupportedOperationException, activemq::exceptions::ActiveMQException)

Requests that the Broker removes the given Destination.

- virtual const **cms::ConnectionMetaData** * **getMetaData** () const throw (cms::CMSException)

Gets the metadata for this connection.

- virtual **cms::Session** * **createSession** () throw (cms::CMSException)

Creates a new Session to work for this Connection.

- virtual **cms::Session** * **createSession** (**cms::Session::AcknowledgeMode** ackMode) throw (cms::CMSException)

Creates a new Session to work for this Connection using the specified acknowledgment mode.

- virtual std::string **getClientID** () const

Get the Client Id for this session.

- virtual void **close** () throw (cms::CMSException)

Closes this connection as well as any Sessions created from it (and those Sessions' consumers and producers).

- virtual void **start** () throw (cms::CMSException)

Starts or (restarts) a connections delivery of incoming messages.

- virtual void **stop** () throw (cms::CMSException)

Stop the flow of incoming messages.

- virtual **cms::ExceptionListener** * **getExceptionListener** () const

Gets the registered Exception Listener for this connection.

- virtual void **setExceptionListener** (**cms::ExceptionListener** *listener)

Sets the registered Exception Listener for this connection.

- void **addTransportListener** (**transport::TransportListener** *transportListener)

Adds a transport listener so that a client can be notified of events in the underlying transport, client's are always notified after the event has been processed by the Connection class.

- void **removeTransportListener** (**transport::TransportListener** *transportListener)

Removes a registered TransportListener from the Connection's set of Transport listeners, this listener will no longer receive any Transport related events.

- virtual void **onCommand** (const **Pointer< commands::Command >** &command)

Event handler for the receipt of a non-response command from the transport.

- virtual void **onException** (const **decaf::lang::Exception** &ex)

Event handler for an exception from a command transport.

- virtual void **transportInterrupted** ()
The transport has suffered an interruption from which it hopes to recover.
- virtual void **transportResumed** ()
The transport has resumed after an interruption.
- const **commands::ConnectionInfo** & **getConnectionInfo** () const throw (exceptions::ActiveMQException)
Gets the ConnectionInfo for this Object, if the Connection is not open than this method throws an exception.
- const **commands::ConnectionId** & **getConnectionId** () const throw (exceptions::ActiveMQException)
Gets the ConnectionId for this Object, if the Connection is not open than this method throws an exception.
- void **oneway** (Pointer< **commands::Command** > command) throw (activemq::exceptions::ActiveMQException)
Sends a oneway message.
- void **syncRequest** (Pointer< **commands::Command** > command, unsigned int timeout=0) throw (activemq::exceptions::ActiveMQException)
Sends a synchronous request and returns the response from the broker.
- virtual void **fire** (const exceptions::ActiveMQException &ex)
Notify the exception listener.

6.21.1 Detailed Description

Concrete connection used for all connectors to the ActiveMQ broker.

6.21.2 Constructor & Destructor Documentation

6.21.2.1 activemq::core::ActiveMQConnection::ActiveMQConnection (const Pointer< transport::Transport > & *transport*, const Pointer< decaf::util::Properties > & *properties*)

Constructor.

Parameters:

transport The Transport requested for this connection to the Broker.

properties The Properties that were defined for this connection

6.21.2.2 `virtual activemq::core::ActiveMQConnection::~~ActiveMQConnection ()`
[virtual]

6.21.3 Member Function Documentation

6.21.3.1 `virtual void activemq::core::ActiveMQConnection::addDispatcher`
(const Pointer< commands::ConsumerId > & *consumer*, Dispatcher *
dispatcher) throw (cms::CMSException) [virtual]

Adds a dispatcher for a consumer.

Parameters:

consumer - The consumer for which to register a dispatcher.

dispatcher - The dispatcher to handle incoming messages for the consumer.

6.21.3.2 `virtual void activemq::core::ActiveMQConnection::addProducer`
(ActiveMQProducer * *producer*) throw (cms::CMSException) [virtual]

Adds an active Producer to the Set of known producers.

Parameters:

producer - The Producer to add from the the known set.

6.21.3.3 `void activemq::core::ActiveMQConnection::addTransportListener`
(transport::TransportListener * *transportListener*)

Adds a transport listener so that a client can be notified of events in the underlying transport, client's are always notified after the event has been processed by the Connection class. Client's should ensure that the registered listener does not block or take a long amount of time to execute in order to not degrade performance of this Connection.

Parameters:

transportListener The TransportListener instance to add to this Connection's set of listeners to notify of Transport events.

6.21.3.4 `virtual void activemq::core::ActiveMQConnection::close () throw (`
`cms::CMSException)` [virtual]

Closes this connection as well as any Sessions created from it (and those Sessions' consumers and producers).

Exceptions:

CMSException

Implements `cms::Connection` (p. 1132).

6.21.3.5 `virtual cms::Session* activemq::core::ActiveMQConnection::createSession (cms::Session::AcknowledgeMode ackMode) throw (cms::CMSException) [virtual]`

Creates a new Session to work for this Connection using the specified acknowledgment mode.

Parameters:

ackMode the Acknowledgment Mode to use.

Exceptions:

CMSException

Implements `cms::Connection` (p. 1132).

6.21.3.6 `virtual cms::Session* activemq::core::ActiveMQConnection::createSession () throw (cms::CMSException) [virtual]`

Creates a new Session to work for this Connection.

Exceptions:

CMSException

Implements `cms::Connection` (p. 1133).

6.21.3.7 `virtual void activemq::core::ActiveMQConnection::destroyDestination (const cms::Destination * destination) throw (decaf::lang::exceptions::NullPointerException, decaf::lang::exceptions::IllegalStateException, decaf::lang::exceptions::UnsupportedOperationException, activemq::exceptions::ActiveMQException) [virtual]`

Requests that the Broker removes the given Destination. Calling this method implies that the client is finished with the Destination and that no other messages will be sent or received for the given Destination. The Broker frees all resources it has associated with this Destination.

Parameters:

destination The CMS Destination the Broker will be requested to remove.

Exceptions:

NullPointerException If the passed Destination is Null

IllegalStateException If the connection is closed.

UnsupportedOperationException If the wire format in use does not support this operation.

ActiveMQException If any other error occurs during the attempt to destroy the destination.

6.21.3.8 `virtual void activemq::core::ActiveMQConnection::destroyDestination (const commands::ActiveMQDestination * destination) throw (decaf::lang::exceptions::NullPointerException, decaf::lang::exceptions::IllegalStateException, decaf::lang::exceptions::UnsupportedOperationException, activemq::exceptions::ActiveMQException) [virtual]`

Requests that the Broker removes the given Destination. Calling this method implies that the client is finished with the Destination and that no other messages will be sent or received for the given Destination. The Broker frees all resources it has associated with this Destination.

Parameters:

destination The Destination the Broker will be requested to remove.

Exceptions:

NullPointerException If the passed Destination is Null

IllegalStateException If the connection is closed.

UnsupportedOperationException If the wire format in use does not support this operation.

ActiveMQException If any other error occurs during the attempt to destroy the destination.

6.21.3.9 `virtual void activemq::core::ActiveMQConnection::fire (const exceptions::ActiveMQException & ex) [virtual]`

Notify the exception listener.

Parameters:

ex the exception to fire

6.21.3.10 `virtual std::string activemq::core::ActiveMQConnection::getClientID () const [virtual]`

Get the Client Id for this session.

Returns:

string version of Client Id

Implements **cms::Connection** (p. 1133).

6.21.3.11 `const commands::ConnectionId& activemq::core::ActiveMQConnection::getConnectionId () const throw (exceptions::ActiveMQException)`

Gets the ConnectionId for this Object, if the Connection is not open than this method throws an exception.

6.21.3.12 `const commands::ConnectionInfo& activemq::core::ActiveMQConnection::getConnectionInfo () const throw (exceptions::ActiveMQException)`

Gets the ConnectionInfo for this Object, if the Connection is not open than this method throws an exception.

6.21.3.13 `virtual cms::ExceptionListener* activemq::core::ActiveMQConnection::getExceptionListener () const [inline, virtual]`

Gets the registered Exception Listener for this connection.

Returns:

pointer to an exception listener or NULL

Implements **cms::Connection** (p. 1133).

6.21.3.14 `virtual const cms::ConnectionMetaData* activemq::core::ActiveMQConnection::getMetaData () const throw (cms::CMSException) [inline, virtual]`

Gets the metadata for this connection.

Returns:

the connection MetaData pointer (caller does not own it).

Exceptions:

CMSException if the provider fails to get the connection metadata for this connection.

See also:

ConnectionMetaData

Since:

2.0

Implements **cms::Connection** (p. 1133).

6.21.3.15 `bool activemq::core::ActiveMQConnection::isClosed () const [inline]`

Checks if this connection has been closed.

Returns:

true if the connection is closed

6.21.3.16 `bool activemq::core::ActiveMQConnection::isStarted () const [inline]`

Check if this connection has been started.

Returns:

true if the start method has been called.

6.21.3.17 `virtual void activemq::core::ActiveMQConnection::onCommand (const Pointer< commands::Command > & command) [virtual]`

Event handler for the receipt of a non-response command from the transport.

Parameters:

command the received command object.

Implements `activemq::transport::TransportListener` (p. 3289).

6.21.3.18 `void activemq::core::ActiveMQConnection::oneway (Pointer< commands::Command > command) throw (activemq::exceptions::ActiveMQException)`

Sends a oneway message.

Parameters:

command The message to send.

Exceptions:

ConnectorException if not currently connected, or if the operation fails for any reason.

6.21.3.19 `virtual void activemq::core::ActiveMQConnection::onException (const decaf::lang::Exception & ex) [virtual]`

Event handler for an exception from a command transport.

Parameters:

ex The exception.

Implements `activemq::transport::TransportListener` (p. 3290).

6.21.3.20 `virtual void activemq::core::ActiveMQConnection::removeDispatcher (const Pointer< commands::ConsumerId > & consumer) throw (cms::CMSException) [virtual]`

Removes the dispatcher for a consumer.

Parameters:

consumer - The consumer for which to remove the dispatcher.

6.21.3.21 `virtual void activemq::core::ActiveMQConnection::removeProducer (const Pointer< commands::ProducerId > & producerId) throw (cms::CMSException) [virtual]`

Removes an active Producer to the Set of known producers.

Parameters:

producerId - The ProducerId to remove from the the known set.

6.21.3.22 `virtual void activemq::core::ActiveMQConnection::removeSession (ActiveMQSession * session) throw (cms::CMSException) [virtual]`

Removes the session resources for the given session instance.

Parameters:

session The session to be unregistered from this connection.

6.21.3.23 `void activemq::core::ActiveMQConnection::removeTransportListener (transport::TransportListener * transportListener)`

Removes a registered TransportListener from the Connection's set of Transport listeners, this listener will no longer receive any Transport related events. The caller is responsible for freeing the listener in all cases.

Parameters:

transportListener The pointer to the TransportListener to remove from the set of listeners.

6.21.3.24 `virtual void activemq::core::ActiveMQConnection::sendPullRequest (const commands::ConsumerInfo * consumer, long long timeout) throw (exceptions::ActiveMQException) [virtual]`

If supported sends a message pull request to the service provider asking for the delivery of a new message. This is used in the case where the service provider has been configured with a zero prefetch or is only capable of delivering messages on a pull basis.

Parameters:

consumer - the ConsumerInfo for the requesting Consumer.

timeout - the time that the client is willing to wait.

6.21.3.25 `virtual void activemq::core::ActiveMQConnection::setExceptionListener (cms::ExceptionListener * listener) [inline, virtual]`

Sets the registered Exception Listener for this connection.

Parameters:

listener pointer to and ExceptionListener

Implements `cms::Connection` (p. 1134).

6.21.3.26 `virtual void activemq::core::ActiveMQConnection::start () throw (cms::CMSException) [virtual]`

Starts or (restarts) a connections delivery of incoming messages.

Exceptions:

CMSException

Implements `cms::Startable` (p. 3014).

6.21.3.27 `virtual void activemq::core::ActiveMQConnection::stop () throw (cms::CMSException) [virtual]`

Stop the flow of incoming messages.

Exceptions:

CMSException

Implements `cms::Stoppable` (p. 3076).

6.21.3.28 `void activemq::core::ActiveMQConnection::syncRequest (Pointer< commands::Command > command, unsigned int timeout = 0) throw (activemq::exceptions::ActiveMQException)`

Sends a synchronous request and returns the response from the broker. Converts any error responses into an exception.

Parameters:

command The request command.

timeout The time to wait for a response, default is zero or infinite.

Exceptions:

ConnectorException thrown if an error response was received from the broker, or if any other error occurred.

6.21.3.29 `virtual void activemq::core::ActiveMQConnection::transportInterrupted () [virtual]`

The transport has suffered an interruption from which it hopes to recover.

Implements `activemq::transport::TransportListener` (p. 3290).

6.21.3.30 `virtual void activemq::core::ActiveMQConnection::transportResumed () [virtual]`

The transport has resumed after an interruption.

Implements `activemq::transport::TransportListener` (p. 3290).

The documentation for this class was generated from the following file:

- `src/main/activemq/core/ActiveMQConnection.h`

6.22 activemq::core::ActiveMQConnectionFactory Class Reference

#include <src/main/activemq/core/ActiveMQConnectionFactory.h> Inheritance diagram for activemq::core::ActiveMQConnectionFactory:

Public Member Functions

- **ActiveMQConnectionFactory** ()
- **ActiveMQConnectionFactory** (const std::string &url, const std::string &username="", const std::string &password="")
Constructor.
- virtual ~**ActiveMQConnectionFactory** ()
- virtual **cms::Connection * createConnection** () throw (cms::CMSEException)
Creates a connection with the default user identity.
- virtual **cms::Connection * createConnection** (const std::string &username, const std::string &password) throw (cms::CMSEException)
Creates a connection with the specified user identity.
- virtual **cms::Connection * createConnection** (const std::string &username, const std::string &password, const std::string &clientId) throw (cms::CMSEException)
Creates a connection with the specified user identity.
- virtual void **setUsername** (const std::string &username)
Sets the username that should be used when creating a new connection.
- virtual const std::string & **getUsername** () const
Gets the username that this factory will use when creating a new connection instance.
- virtual void **setPassword** (const std::string &password)
Sets the password that should be used when creating a new connection.
- virtual const std::string & **getPassword** () const
Gets the password that this factory will use when creating a new connection instance.
- virtual void **setBrokerURL** (const std::string &brokerURL)
Sets the Broker URL that should be used when creating a new connection instance.
- virtual const std::string & **getBrokerURL** () const
Gets the Broker URL that this factory will use when creating a new connection instance.

Static Public Member Functions

- static **cms::Connection * createConnection** (const std::string &url, const std::string &username, const std::string &password, const std::string &clientId="") throw (cms::CMSEException)

Creates a connection with the specified user identity.

6.22.1 Constructor & Destructor Documentation

6.22.1.1 **activemq::core::ActiveMQConnectionFactory::ActiveMQConnectionFactory**
()

6.22.1.2 **activemq::core::ActiveMQConnectionFactory::ActiveMQConnectionFactory**
(const std::string & url, const std::string & username = "", const
std::string & password = "")

Constructor.

Parameters:

url the URL of the Broker we are connecting to.

username to authenticate with, defaults to ""

password to authenticate with, defaults to ""

6.22.1.3 **virtual**
activemq::core::ActiveMQConnectionFactory::~~ActiveMQConnectionFactory
() [inline, virtual]

6.22.2 Member Function Documentation

6.22.2.1 **static cms::Connection* ac-**
tivemq::core::ActiveMQConnectionFactory::createConnection (const
std::string & url, const std::string & username, const std::string &
password, const std::string & *clientId* = "") throw (cms::CMSEException
) [static]

Creates a connection with the specified user identity. The connection is created in stopped mode. No messages will be delivered until the Connection.start method is explicitly called.

Parameters:

url the URL of the Broker we are connecting to.

username to authenticate with

password to authenticate with

clientId to assign to connection, defaults to ""

Exceptions:

CMSEException.

6.22.2.2 `virtual cms::Connection* activemq::core::ActiveMQConnectionFactory::createConnection (const std::string & username, const std::string & password, const std::string & clientId) throw (cms::CMSEException) [virtual]`

Creates a connection with the specified user identity. The connection is created in stopped mode. No messages will be delivered until the Connection.start method is explicitly called. The username and password values passed here do not change the defaults, subsequent calls to the parameterless createConnection will continue to use the default values that were set in the Constructor.

Parameters:

username to authenticate with

password to authenticate with

clientId to assign to connection if "" then a random client Id is created for this connection.

Returns:

a Connection Pointer

Exceptions:

CMSEException

Implements `cms::ConnectionFactory` (p. 1185).

6.22.2.3 `virtual cms::Connection* activemq::core::ActiveMQConnectionFactory::createConnection (const std::string & username, const std::string & password) throw (cms::CMSEException) [virtual]`

Creates a connection with the specified user identity. The connection is created in stopped mode. No messages will be delivered until the Connection.start method is explicitly called. The username and password values passed here do not change the defaults, subsequent calls to the parameterless createConnection will continue to use the default values that were set in the Constructor.

Parameters:

username to authenticate with

password to authenticate with

Returns:

a Connection Pointer

Exceptions:

CMSEException

Implements `cms::ConnectionFactory` (p. 1186).

6.22.2.4 `virtual cms::Connection* activemq::core::ActiveMQConnectionFactory::createConnection () throw (cms::CMSEException) [virtual]`

Creates a connection with the default user identity. The connection is created in stopped mode. No messages will be delivered until the Connection.start method is explicitly called.

Returns:

a Connection Pointer

Exceptions:

CMSException

Implements **cms::ConnectionFactory** (p. 1186).

6.22.2.5 `virtual const std::string& activemq::core::ActiveMQConnectionFactory::getBrokerURL () const [inline, virtual]`

Gets the Broker URL that this factory will use when creating a new connection instance.

Returns:

brokerURL string

6.22.2.6 `virtual const std::string& activemq::core::ActiveMQConnectionFactory::getPassword () const [inline, virtual]`

Gets the password that this factory will use when creating a new connection instance.

Returns:

password string, "" for default credentials

6.22.2.7 `virtual const std::string& activemq::core::ActiveMQConnectionFactory::getUsername () const [inline, virtual]`

Gets the username that this factory will use when creating a new connection instance.

Returns:

username string, "" for default credentials

6.22.2.8 `virtual void activemq::core::ActiveMQConnectionFactory::setBrokerURL (const std::string & brokerURL) [inline, virtual]`

Sets the Broker URL that should be used when creating a new connection instance.

Parameters:

brokerURL string

6.22.2.9 `virtual void activemq::core::ActiveMQConnectionFactory::setPassword
(const std::string & password)` [inline, virtual]

Sets the password that should be used when creating a new connection.

Parameters:

password string

6.22.2.10 `virtual void activemq::core::ActiveMQConnectionFactory::setUsername
(const std::string & username)` [inline, virtual]

Sets the username that should be used when creating a new connection.

Parameters:

username string

The documentation for this class was generated from the following file:

6.23 activemq::core::ActiveMQConnectionMetaData Class Reference

This class houses all the various settings and information that is used by an instance of an **ActiveMQConnection** (p. 233) class.

#include <src/main/activemq/core/ActiveMQConnectionMetaData.h> Inheritance diagram for activemq::core::ActiveMQConnectionMetaData:

Public Member Functions

- **ActiveMQConnectionMetaData** ()
- virtual **~ActiveMQConnectionMetaData** ()
- virtual std::string **getCMSVersion** () const throw (cms::CMSEException)
Gets the CMS API version.
- virtual int **getCMSMajorVersion** () const throw (cms::CMSEException)
Gets the CMS major version number.
- virtual int **getCMSMinorVersion** () const throw (cms::CMSEException)
Gets the CMS minor version number.
- virtual std::string **getCMSProviderName** () const throw (cms::CMSEException)
Gets the CMS provider name.
- virtual std::string **getProviderVersion** () const throw (cms::CMSEException)
Gets the CMS provider version.
- virtual int **getProviderMajorVersion** () const throw (cms::CMSEException)
Gets the CMS provider major version number.
- virtual int **getProviderMinorVersion** () const throw (cms::CMSEException)
Gets the CMS provider minor version number.
- virtual std::vector< std::string > **getCMSXPropertyNames** () const throw (cms::CMSEException)
Gets an Vector of the CMSX property names.

6.23.1 Detailed Description

This class houses all the various settings and information that is used by an instance of an **ActiveMQConnection** (p. 233) class.

Since:

3.0

6.23.2 Constructor & Destructor Documentation

6.23.2.1 `activemq::core::ActiveMQConnectionMetaData::ActiveMQConnectionMetaData()`

6.23.2.2 `virtual activemq::core::ActiveMQConnectionMetaData::~~ActiveMQConnectionMetaData()` [virtual]

6.23.3 Member Function Documentation

6.23.3.1 `virtual int activemq::core::ActiveMQConnectionMetaData::getCMSMajorVersion()`
`const throw (cms::CMSException)` [virtual]

Gets the CMS major version number.

Returns:

the CMS API major version number

Exceptions:

CMSException If the CMS Provider fails to retrieve the metadata due to some internal error.

Implements `cms::ConnectionMetaData` (p.1238).

6.23.3.2 `virtual int activemq::core::ActiveMQConnectionMetaData::getCMSMinorVersion()`
`const throw (cms::CMSException)` [virtual]

Gets the CMS minor version number.

Returns:

the CMS API minor version number

Exceptions:

CMSException If the CMS Provider fails to retrieve the metadata due to some internal error.

Implements `cms::ConnectionMetaData` (p.1238).

6.23.3.3 `virtual std::string activemq::core::ActiveMQConnectionMetaData::getCMSProviderName()`
`const throw (cms::CMSException)` [virtual]

Gets the CMS provider name.

Returns:

the CMS provider name

Exceptions:

CMSException If the CMS Provider fails to retrieve the metadata due to some internal error.

Implements **cms::ConnectionMetaData** (p.1238).

6.23.3.4 `virtual std::string activemq::core::ActiveMQConnectionMetaData::getCMSVersion () const throw (cms::CMSException) [virtual]`

Gets the CMS API version.

Returns:

the CMS API Version in String form.

Exceptions:

CMSException If the CMS Provider fails to retrieve the metadata due to some internal error.

Implements **cms::ConnectionMetaData** (p.1239).

6.23.3.5 `virtual std::vector<std::string> activemq::core::ActiveMQConnectionMetaData::getCMSXPropertyNames () const throw (cms::CMSException) [virtual]`

Gets an Vector of the CMSX property names.

Returns:

an Vector of CMSX property names

Exceptions:

CMSException If the CMS Provider fails to retrieve the metadata due to some internal error.

Implements **cms::ConnectionMetaData** (p.1239).

6.23.3.6 `virtual int activemq::core::ActiveMQConnectionMetaData::getProviderMajorVersion () const throw (cms::CMSException) [virtual]`

Gets the CMS provider major version number.

Returns:

the CMS provider major version number

Exceptions:

CMSException If the CMS Provider fails to retrieve the metadata due to some internal error.

Implements **cms::ConnectionMetaData** (p.1239).

6.23.3.7 `virtual int activemq::core::ActiveMQConnectionMetaData::getProviderMinorVersion () const throw (cms::CMSException) [virtual]`

Gets the CMS provider minor version number.

Returns:

the CMS provider minor version number

Exceptions:

CMSException If the CMS Provider fails to retrieve the metadata due to some internal error.

Implements **cms::ConnectionMetaData** (p.1239).

6.23.3.8 `virtual std::string activemq::core::ActiveMQConnectionMetaData::getProviderVersion () const throw (cms::CMSException) [virtual]`

Gets the CMS provider version.

Returns:

the CMS provider version

Exceptions:

CMSException If the CMS Provider fails to retrieve the metadata due to some internal error.

Implements **cms::ConnectionMetaData** (p.1240).

The documentation for this class was generated from the following file:

- `src/main/activemq/core/ActiveMQConnectionMetaData.h`

6.24 activemq::core::ActiveMQConnectionSupport Class Reference

#include <src/main/activemq/core/ActiveMQConnectionSupport.h> Inheritance diagram for activemq::core::ActiveMQConnectionSupport:

Public Member Functions

- **ActiveMQConnectionSupport** (const **Pointer**< **transport::Transport** > &transport, const **Pointer**< **decaf::util::Properties** > &properties)
*Creates an instance of the **ActiveMQConnectionSupport** (p. 253) class, the most common properties for a connection are pulled from the properties instance or are set to defaults.*
- virtual ~**ActiveMQConnectionSupport** ()
- virtual void **startupTransport** () throw (decaf::lang::Exception)
Starts the Transport, this should initiate the connection between this client and the Transports endpoint.
- virtual void **shutdownTransport** () throw (decaf::lang::Exception)
Closes this object and deallocates the appropriate resources.
- const **decaf::util::Properties** & **getProperties** () const
Gets the Properties object that this Config object was initialized with.
- **transport::Transport** & **getTransport** () const
Gets the Transport Configured for this Connection.
- bool **isAlwaysSyncSend** () const
Gets if the Connection should always send things Synchronously.
- void **setAlwaysSyncSend** (bool value)
Sets if the Connection should always send things Synchronously.
- bool **isUseAsyncSend** () const
Gets if the useAsyncSend option is set.
- void **setUseAsyncSend** (bool value)
Sets the useAsyncSend option.
- unsigned int **getSendTimeout** () const
Gets the assigned send timeout for this Connector.
- void **setSendTimeout** (unsigned int timeout)
Sets the send timeout to use when sending Message objects, this will cause all messages to be sent using a Synchronous request is non-zero.
- unsigned int **getCloseTimeout** () const
Gets the assigned close timeout for this Connector.

- void **setCloseTimeout** (unsigned int timeout)
Sets the close timeout to use when sending the disconnect request.
- unsigned int **getProducerWindowSize** () const
Gets the configured producer window size for Producers that are created from this connector.
- void **setProducerWindowSize** (unsigned int windowSize)
Sets the size in Bytes of messages that a producer can send before it is blocked to await a ProducerAck from the broker that frees enough memory to allow another message to be sent.
- std::string **getUsername** () const
Gets the Configured Username.
- void **setUsername** (const std::string &username)
Sets the Username.
- std::string **getPassword** () const
Gets the Configured Password.
- void **setPassword** (const std::string &password)
Sets the Password.
- std::string **getClientId** () const
Gets the Configured Client Id.
- void **setClientId** (const std::string &clientId)
Sets the Client Id.
- long long **getNextSessionId** ()
Get the Next available Session Id.
- long long **getNextTempDestinationId** ()
Get the Next Temporary Destination Id.
- long long **getNextLocalTransactionId** ()
Get the Next Temporary Destination Id.

6.24.1 Constructor & Destructor Documentation

6.24.1.1 **activemq::core::ActiveMQConnectionSupport::ActiveMQConnectionSupport** (const Pointer< transport::Transport > & *transport*, const Pointer< decaf::util::Properties > & *properties*)

Creates an instance of the **ActiveMQConnectionSupport** (p. 253) class, the most common properties for a connection are pulled from the properties instance or are set to defaults.

Parameters:

- transport*** The Transport that this Connection will use for sending Commands to the Broker.
- properties*** The URI configured properties for this connection.

6.24.1.2 `virtual
activemq::core::ActiveMQConnectionSupport::~~ActiveMQConnectionSupport
() [virtual]`

6.24.2 Member Function Documentation

6.24.2.1 `std::string activemq::core::ActiveMQConnectionSupport::getClientId ()
const [inline]`

Gets the Configured Client Id.

Returns:

the clientId.

6.24.2.2 `unsigned int ac-
tivemq::core::ActiveMQConnectionSupport::getCloseTimeout () const
[inline]`

Gets the assigned close timeout for this Connector.

Returns:

the close timeout configured in the connection uri

6.24.2.3 `long long ac-
tivemq::core::ActiveMQConnectionSupport::getNextLocalTransactionId ()
[inline]`

Get the Next Temporary Destination Id.

Returns:

the next id in the sequence.

6.24.2.4 `long long activemq::core::ActiveMQConnectionSupport::getNextSessionId
() [inline]`

Get the Next available Session Id.

Returns:

the next id in the sequence.

6.24.2.5 `long long ac-
tivemq::core::ActiveMQConnectionSupport::getNextTempDestinationId ()
[inline]`

Get the Next Temporary Destination Id.

Returns:

the next id in the sequence.

6.24.2.6 `std::string activemq::core::ActiveMQConnectionSupport::getPassword ()`
`const [inline]`

Gets the Configured Password.

Returns:

the password.

6.24.2.7 `unsigned int activemq::core::ActiveMQConnectionSupport::getProducerWindowSize ()`
`const [inline]`

Gets the configured producer window size for Producers that are created from this connector. This only applies if there is no send timeout and the producer is able to send asynchronously.

Returns:

size in bytes of messages that this producer can produce before it must block and wait for ProducerAck messages to free resources.

6.24.2.8 `const decaf::util::Properties& activemq::core::ActiveMQConnectionSupport::getProperties ()`
`const [inline]`

Gets the Properties object that this Config object was initialized with.

Returns:

a const reference to the Connection Config.

References `decaf::lang::Pointer< T, REFCOUNTER >::get()`.

6.24.2.9 `unsigned int activemq::core::ActiveMQConnectionSupport::getSendTimeout ()`
`const [inline]`

Gets the assigned send timeout for this Connector.

Returns:

the send timeout configured in the connection uri

6.24.2.10 `transport::Transport& activemq::core::ActiveMQConnectionSupport::getTransport ()`
`const [inline]`

Gets the Transport Configured for this Connection.

Returns:

the configured transport

References `decaf::lang::Pointer< T, REFCOUNTER >::get()`.

6.24.2.11 `std::string activemq::core::ActiveMQConnectionSupport::getUsername ()`
`const [inline]`

Gets the Configured Username.

Returns:

the username.

6.24.2.12 `bool activemq::core::ActiveMQConnectionSupport::isAlwaysSyncSend ()`
`const [inline]`

Gets if the Connection should always send things Synchronously.

Returns:

true if sends should always be Synchronous.

6.24.2.13 `bool activemq::core::ActiveMQConnectionSupport::isUseAsyncSend ()`
`const [inline]`

Gets if the useAsyncSend option is set.

Returns:

true if on false if not.

6.24.2.14 `void activemq::core::ActiveMQConnectionSupport::setAlwaysSyncSend`
`(bool value) [inline]`

Sets if the Connection should always send things Synchronously.

Parameters:

value true if sends should always be Synchronous.

6.24.2.15 `void activemq::core::ActiveMQConnectionSupport::setClientId (const`
`std::string & clientId) [inline]`

Sets the Client Id.

Parameters:

clientId - The new clientId value.

6.24.2.16 `void activemq::core::ActiveMQConnectionSupport::setCloseTimeout`
`(unsigned int timeout) [inline]`

Sets the close timeout to use when sending the disconnect request.

Parameters:

timeout - The time to wait for a close message.

6.24.2.17 `void activemq::core::ActiveMQConnectionSupport::setPassword (const std::string & password) [inline]`

Sets the Password.

Parameters:

password - The new password value.

6.24.2.18 `void activemq::core::ActiveMQConnectionSupport::setProducerWindowSize (unsigned int windowSize) [inline]`

Sets the size in Bytes of messages that a producer can send before it is blocked to await a ProducerAck from the broker that frees enough memory to allow another message to be sent.

Parameters:

windowSize - The size in bytes of the Producers memory window.

6.24.2.19 `void activemq::core::ActiveMQConnectionSupport::setSendTimeout (unsigned int timeout) [inline]`

Sets the send timeout to use when sending Message objects, this will cause all messages to be sent using a Synchronous request is non-zero.

Parameters:

timeout - The time to wait for a response.

6.24.2.20 `void activemq::core::ActiveMQConnectionSupport::setUseAsyncSend (bool value) [inline]`

Sets the useAsyncSend option.

Parameters:

value - true to activate, false to disable.

6.24.2.21 `void activemq::core::ActiveMQConnectionSupport::setUsername (const std::string & username) [inline]`

Sets the Username.

Parameters:

username - The new username value.

6.24.2.22 virtual void activemq::core::ActiveMQConnectionSupport::shutdownTransport () throw (decaf::lang::Exception) [virtual]

Closes this object and deallocates the appropriate resources. The object is generally no longer usable after calling close.

Exceptions:

Exception

6.24.2.23 virtual void activemq::core::ActiveMQConnectionSupport::startupTransport () throw (decaf::lang::Exception) [virtual]

Starts the Transport, this should initiate the connection between this client and the Transports endpoint.

Exceptions:

Exception

The documentation for this class was generated from the following file:

- src/main/activemq/core/ActiveMQConnectionSupport.h

6.25 activemq::core::ActiveMQConstants Class Reference

Class holding constant values for various ActiveMQ specific things Each constant is defined as an enumeration and has functions that convert back and forth between string and enum values.

```
#include <src/main/activemq/core/ActiveMQConstants.h>
```

Data Structures

- class `StaticInitializer`

Public Types

- enum `TransactionState` {
`TRANSACTION_STATE_BEGIN` = 0, `TRANSACTION_STATE_PREPARE` = 1, `TRANSACTION_STATE_COMMITONEPHASE` = 2, `TRANSACTION_STATE_COMMITTWOPHASE` = 3,
`TRANSACTION_STATE_ROLLBACK` = 4, `TRANSACTION_STATE_RECOVER` = 5, `TRANSACTION_STATE_FORGET` = 6, `TRANSACTION_STATE_END` = 7 }
 - enum `DestinationActions` { `DESTINATION_ADD_OPERATION` = 0, `DESTINATION_REMOVE_OPERATION` = 1 }
 - enum `AckType` {
`ACK_TYPE_DELIVERED` = 0, `ACK_TYPE_POISON` = 1, `ACK_TYPE_CONSUMED` = 2, `ACK_TYPE_REDELIVERED` = 3,
`ACK_TYPE_INDIVIDUAL` = 4 }
 - enum `DestinationOption` {
`CONSUMER_PREFETCHSIZE`, `CONSUMER_MAXPENDINGMSGLIMIT`, `CONSUMER_NOLOCAL`, `CONSUMER_DISPATCHASYNC`,
`CONSUMER_RETROACTIVE`, `CONSUMER_SELECTOR`, `CONSUMER_EXCLUSIVE`, `CONSUMER_PRIORITY`,
`NUM_OPTIONS` }
- These values represent the options that can be appended to an Destination name, i.e.*
- enum `URIParam` {
`CONNECTION_SENDTIMEOUT`, `CONNECTION_PRODUCERWINDOWSIZE`, `CONNECTION_CLOSETIMEOUT`,
`CONNECTION_ALWAYSSENDSYNC`, `CONNECTION_USEASYNCSYNC`, `PARAM_USERNAME`, `PARAM_PASSWORD`, `PARAM_CLIENTID`,
`NUM_PARAMS` }
- These values represent the parameters that can be added to the connection URI that affect the ActiveMQ Core API.*

Static Public Member Functions

- static const std::string & **toString** (const **DestinationOption** option)
- static **DestinationOption** **toDestinationOption** (const std::string &option)
- static const std::string & **toString** (const **URIParam** option)
- static **URIParam** **toURIOption** (const std::string &option)

6.25.1 Detailed Description

Class holding constant values for various ActiveMQ specific things Each constant is defined as an enumeration and has functions that convert back and forth between string and enum values.

6.25.2 Member Enumeration Documentation

6.25.2.1 enum activemq::core::ActiveMQConstants::AckType

Enumerator:

```
ACK_TYPE_DELIVERED
ACK_TYPE_POISON
ACK_TYPE_CONSUMED
ACK_TYPE_REDELIVERED
ACK_TYPE_INDIVIDUAL
```

6.25.2.2 enum activemq::core::ActiveMQConstants::DestinationActions

Enumerator:

```
DESTINATION_ADD_OPERATION
DESTINATION_REMOVE_OPERATION
```

6.25.2.3 enum activemq::core::ActiveMQConstants::DestinationOption

These values represent the options that can be appended to an Destination name, i.e. /topic/-foo?consumer.exclusive=true

Enumerator:

```
CONSUMER_PREFETCHSIZE
CUNSUMER_MAXPENDINGMSGLIMIT
CONSUMER_NOLOCAL
CONSUMER_DISPATCHASYNC
CONSUMER_RETROACTIVE
CONSUMER_SELECTOR
CONSUMER_EXCLUSIVE
CONSUMER_PRIORITY
NUM_OPTIONS
```

6.25.2.4 enum activemq::core::ActiveMQConstants::TransactionState

Enumerator:

```
TRANSACTION_STATE_BEGIN
TRANSACTION_STATE_PREPARE
TRANSACTION_STATE_COMMITONEPHASE
TRANSACTION_STATE_COMMITTWOPHASE
TRANSACTION_STATE_ROLLBACK
TRANSACTION_STATE_RECOVER
TRANSACTION_STATE_FORGET
TRANSACTION_STATE_END
```

6.25.2.5 enum activemq::core::ActiveMQConstants::URIParam

These values represent the parameters that can be added to the connection URI that affect the ActiveMQ Core API.

Enumerator:

```
CONNECTION_SENDDTIMEOUT
CONNECTION_PRODUCERWINDOWSIZE
CONNECTION_CLOSETIMEOUT
CONNECTION_ALWAYSASYNCSEND
CONNECTION_USEASYNCSEND
PARAM_USERNAME
PARAM_PASSWORD
PARAM_CLIENTID
NUM_PARAMS
```

6.25.3 Member Function Documentation

6.26 activemq::core::ActiveMQConsumer Class Reference

#include <src/main/activemq/core/ActiveMQConsumer.h> Inheritance diagram for activemq::core::ActiveMQConsumer:

Public Member Functions

- **ActiveMQConsumer** (const **Pointer**< **commands::ConsumerInfo** > &consumerInfo, **ActiveMQSession** *session, const **Pointer**< **ActiveMQTransactionContext** > &transaction)
Constructor.
- virtual ~**ActiveMQConsumer** ()
- virtual void **start** ()
Starts the Consumer if not already started and not closed.
- virtual void **stop** ()
Stops a Consumer, the Consumer will not deliver any messages that are dispatched to it until it is started again.
- virtual void **close** () throw (cms::CMSException)
Closes the Consumer.
- virtual **cms::Message** * **receive** () throw (cms::CMSException)
Synchronously Receive a Message.
- virtual **cms::Message** * **receive** (int millisecs) throw (cms::CMSException)
Synchronously Receive a Message, time out after defined interval.
- virtual **cms::Message** * **receiveNoWait** () throw (cms::CMSException)
Receive a Message, does not wait if there isn't a new message to read, returns NULL if nothing read.
- virtual void **setMessageListener** (**cms::MessageListener** *listener) throw (cms::CMSException)
Sets the MessageListener that this class will send notifys on.
- virtual **cms::MessageListener** * **getMessageListener** () const throw (cms::CMSException)
Gets the MessageListener that this class will send events to.
- virtual std::string **getMessageSelector** () const throw (cms::CMSException)
Gets this message consumer's message selector expression.
- virtual void **acknowledge** (const **Pointer**< **commands::MessageDispatch** > &dispatch) throw (cms::CMSException)
Method called to acknowledge the message passed, called from a message when the mode is client ack.

- virtual void **dispatch** (const **Pointer**< **MessageDispatch** > &message)
Called asynchronously by the session to dispatch a message.
- void **acknowledge** () throw (cms::CMSEException)
Method called to acknowledge all messages that have been received so far.
- void **commit** () throw (exceptions::ActiveMQException)
Called to Commit the current set of messages in this Transaction.
- void **rollback** () throw (exceptions::ActiveMQException)
Called to Roll back the current set of messages in this Transaction.
- void **doClose** () throw (exceptions::ActiveMQException)
Performs the actual close operation on this consumer.
- const **commands::ConsumerInfo** & **getConsumerInfo** () const
Get the Consumer information for this consumer.
- const **commands::ConsumerId** & **getConsumerId** () const
Get the Consumer Id for this consumer.
- bool **isClosed** () const
- bool **isSynchronizationRegistered** () const
*Has this Consumer Transaction **Synchronization** (p. 3137) been added to the transaction.*
- void **setSynchronizationRegistered** (bool value)
*Sets the **Synchronization** (p. 3137) Registered state of this consumer.*
- bool **iterate** ()
Deliver any pending messages to the registered MessageListener if there is one, return true if not all dispatched, or false if no listener or all pending messages have been dispatched.
- void **deliverAcks** () throw (exceptions::ActiveMQException)
Forces this consumer to send all pending acks to the broker.
- void **clearMessagesInProgress** ()
Called on a Failover to clear any pending messages.
- long long **getLastDeliveredSequenceId** () const
Gets the currently set Last Delivered Sequence Id.
- void **setLastDeliveredSequenceId** (long long value)
Sets the value of the Last Delivered Sequence Id.

Protected Member Functions

- **Pointer< MessageDispatch > dequeue** (long long timeout) throw (cms::CMSException)

Used by synchronous receive methods to wait for messages to come in.

- **void beforeMessageIsConsumed** (const Pointer< commands::MessageDispatch > &dispatch)

Pre-consume processing.

- **void afterMessageIsConsumed** (const Pointer< commands::MessageDispatch > &dispatch, bool messageExpired)

Post-consume processing.

6.26.1 Constructor & Destructor Documentation

- 6.26.1.1** **activemq::core::ActiveMQConsumer::ActiveMQConsumer** (const Pointer< commands::ConsumerInfo > & *consumerInfo*, ActiveMQSession * *session*, const Pointer< ActiveMQTransactionContext > & *transaction*)

Constructor.

- 6.26.1.2** **virtual activemq::core::ActiveMQConsumer::~~ActiveMQConsumer** ()
[virtual]

6.26.2 Member Function Documentation

- 6.26.2.1** **void activemq::core::ActiveMQConsumer::acknowledge** () throw (cms::CMSException)

Method called to acknowledge all messages that have been received so far.

Exceptions:

CMSException

- 6.26.2.2** **virtual void activemq::core::ActiveMQConsumer::acknowledge** (const Pointer< commands::MessageDispatch > & *dispatch*) throw (cms::CMSException) [virtual]

Method called to acknowledge the message passed, called from a message when the mode is client ack.

Parameters:

message the Message to Acknowledge

Exceptions:

CMSException

6.26.2.3 `void activemq::core::ActiveMQConsumer::afterMessageIsConsumed (const Pointer< commands::MessageDispatch > & dispatch, bool messageExpired)` [protected]

Post-consume processing.

Parameters:

dispatch - the consumed message

messageExpired - flag indicating if the message has expired.

6.26.2.4 `void activemq::core::ActiveMQConsumer::beforeMessageIsConsumed (const Pointer< commands::MessageDispatch > & dispatch)` [protected]

Pre-consume processing.

Parameters:

dispatch - the message being consumed.

6.26.2.5 `void activemq::core::ActiveMQConsumer::clearMessagesInProgress ()`

Called on a Failover to clear any pending messages.

6.26.2.6 `virtual void activemq::core::ActiveMQConsumer::close () throw (cms::CMSException)` [virtual]

Closes the Consumer. This will return all allocated resources and purge any outstanding messages. This method will block if there is a call to receive in progress, or a dispatch to a MessageListener in place

Exceptions:

CMSException

Implements `cms::Closeable` (p.1021).

6.26.2.7 `void activemq::core::ActiveMQConsumer::commit () throw (exceptions::ActiveMQException)`

Called to Commit the current set of messages in this Transaction.

Exceptions:

ActiveMQException

6.26.2.8 `void activemq::core::ActiveMQConsumer::deliverAcks () throw (exceptions::ActiveMQException)`

Forces this consumer to send all pending acks to the broker.

6.26.2.9 `Pointer<MessageDispatch> activemq::core::ActiveMQConsumer::dequeue (long long timeout) throw (cms::CMSException)` [protected]

Used by synchronous receive methods to wait for messages to come in.

Parameters:

timeout - The maximum number of milliseconds to wait before returning. If -1, it will block until a messages is received or this consumer is closed. If 0, will not block at all. If > 0, will wait at a maximum the specified number of milliseconds before returning.

Returns:

the message, if received within the allotted time. Otherwise NULL.

Exceptions:

InvalidStateException if this consumer is closed upon entering this method.

6.26.2.10 `virtual void activemq::core::ActiveMQConsumer::dispatch (const Pointer< MessageDispatch > & message)` [virtual]

Called asynchronously by the session to dispatch a message.

Parameters:

message dispatch object pointer

Implements `activemq::core::Dispatcher` (p. 1536).

6.26.2.11 `void activemq::core::ActiveMQConsumer::doClose () throw (exceptions::ActiveMQException)`

Performs the actual close operation on this consumer.

Exceptions:

ActiveMQException

6.26.2.12 `const commands::ConsumerId& activemq::core::ActiveMQConsumer::getConsumerId () const` [inline]

Get the Consumer Id for this consumer.

Returns:

Reference to a Consumer Id Object

6.26.2.13 `const commands::ConsumerInfo& activemq::core::ActiveMQConsumer::getConsumerInfo () const [inline]`

Get the Consumer information for this consumer.

Returns:

Reference to a Consumer Info Object

6.26.2.14 `long long activemq::core::ActiveMQConsumer::getLastDeliveredSequenceId () const [inline]`

Gets the currently set Last Delivered Sequence Id.

Returns:

long long containing the sequence id of the last delivered Message.

6.26.2.15 `virtual cms::MessageListener* activemq::core::ActiveMQConsumer::getMessageListener () const throw (cms::CMSException) [inline, virtual]`

Gets the MessageListener that this class will send events to.

Returns:

the currently registered MessageListener interface pointer.

Implements `cms::MessageConsumer` (p. 2215).

6.26.2.16 `virtual std::string activemq::core::ActiveMQConsumer::getMessageSelector () const throw (cms::CMSException) [virtual]`

Gets this message consumer's message selector expression.

Returns:

This Consumer's selector expression or "".

Exceptions:

cms::CMSException (p. 1031)

Implements `cms::MessageConsumer` (p. 2215).

6.26.2.17 `bool activemq::core::ActiveMQConsumer::isClosed () const [inline]`

Returns:

if this Consumer has been closed.

6.26.2.18 `bool activemq::core::ActiveMQConsumer::isSynchronizationRegistered ()
const [inline]`

Has this Consumer Transaction **Synchronization** (p. 3137) been added to the transaction.

Returns:

true if the synchronization has been added.

6.26.2.19 `bool activemq::core::ActiveMQConsumer::iterate ()`

Deliver any pending messages to the registered MessageListener if there is one, return true if not all dispatched, or false if no listener or all pending messages have been dispatched.

6.26.2.20 `virtual cms::Message* activemq::core::ActiveMQConsumer::receive (int
milliseconds) throw (cms::CMSException) [virtual]`

Synchronously Receive a Message, time out after defined interval. Returns null if nothing read.

Parameters:

milliseconds the time in milliseconds to wait before returning

Returns:

new message or null on timeout

Exceptions:

CMSException

Implements `cms::MessageConsumer` (p. 2215).

6.26.2.21 `virtual cms::Message* activemq::core::ActiveMQConsumer::receive ()
throw (cms::CMSException) [virtual]`

Synchronously Receive a Message.

Returns:

new message

Exceptions:

CMSException

Implements `cms::MessageConsumer` (p. 2216).

6.26.2.22 `virtual cms::Message* ac-
tivemq::core::ActiveMQConsumer::receiveNoWait ()
throw (cms::CMSException) [virtual]`

Receive a Message, does not wait if there isn't a new message to read, returns NULL if nothing read.

Returns:

new message

Exceptions:

CMSEException

Implements **cms::MessageConsumer** (p. 2216).

6.26.2.23 `void activemq::core::ActiveMQConsumer::rollback () throw (exceptions::ActiveMQException)`

Called to Roll back the current set of messages in this Transaction.

Exceptions:

ActiveMQException

6.26.2.24 `void activemq::core::ActiveMQConsumer::setLastDeliveredSequenceId (long long value) [inline]`

Sets the value of the Last Delivered Sequence Id.

Parameters:

value The new value to assign to the Last Delivered Sequence Id property.

6.26.2.25 `virtual void activemq::core::ActiveMQConsumer::setMessageListener (cms::MessageListener * listener) throw (cms::CMSEException) [virtual]`

Sets the MessageListener that this class will send notifs on.

Parameters:

listener MessageListener interface pointer

Implements **cms::MessageConsumer** (p. 2216).

6.26.2.26 `void activemq::core::ActiveMQConsumer::setSynchronizationRegistered (bool value) [inline]`

Sets the **Synchronization** (p. 3137) Registered state of this consumer.

Parameters:

value - true if registered false otherwise.

6.26.2.27 `virtual void activemq::core::ActiveMQConsumer::start () [virtual]`

Starts the Consumer if not already started and not closed. A consumer will no deliver messages until started.

6.26.2.28 virtual void activemq::core::ActiveMQConsumer::stop () [virtual]

Stops a Consumer, the Consumer will not deliver any messages that are dispatched to it until it is started again. A Closed Consumer is also a stopped consumer.

The documentation for this class was generated from the following file:

- `src/main/activemq/core/ActiveMQConsumer.h`

6.27 activemq::library::ActiveMQCPP Class Reference

```
#include <src/main/activemq/library/ActiveMQCPP.h>
```

Public Member Functions

- virtual `~ActiveMQCPP ()`

Static Public Member Functions

- static void `initializeLibrary ()`
Initialize the ActiveMQ-CPP Library constructs, this method will init all the internal Registry objects and initialize the Decaf library.
- static void `initializeLibrary (int argc, char **argv)`
Initialize the ActiveMQ-CPP Library constructs, this method will initialize all the internal Registry objects and initialize the Decaf library.
- static void `shutdownLibrary ()`
Shutdown the ActiveMQ-CPP Library, freeing any resources that could not be freed up to this point.

Protected Member Functions

- `ActiveMQCPP ()`
- `ActiveMQCPP (const ActiveMQCPP &)`
- `ActiveMQCPP & operator= (const ActiveMQCPP &)`

6.27.1 Constructor & Destructor Documentation

6.27.1.1 `activemq::library::ActiveMQCPP::ActiveMQCPP () [inline, protected]`

6.27.1.2 `activemq::library::ActiveMQCPP::ActiveMQCPP (const ActiveMQCPP &) [protected]`

6.27.1.3 `virtual activemq::library::ActiveMQCPP::~~ActiveMQCPP () [inline, virtual]`

6.27.2 Member Function Documentation

6.27.2.1 `static void activemq::library::ActiveMQCPP::initializeLibrary (int argc, char ** argv) [static]`

Initialize the ActiveMQ-CPP Library constructs, this method will initialize all the internal Registry objects and initialize the Decaf library. This method takes the args passed to the main method of process for use is setting system properties and configuring the ActiveMQ-CPP Library.

Parameters:

argc - the count of arguments passed to this Process.

argv - the array of string arguments passed to this process.

Exceptions:

runtime_error if an error occurs while initializing this library.

6.27.2.2 static void activemq::library::ActiveMQCPP::initializeLibrary () [static]

Initialize the ActiveMQ-CPP Library constructs, this method will init all the internal Registry objects and initialize the Decaf library.

Exceptions:

runtime_error if an error occurs while initializing this library.

6.27.2.3 ActiveMQCPP& activemq::library::ActiveMQCPP::operator= (const ActiveMQCPP &) [protected]

6.27.2.4 static void activemq::library::ActiveMQCPP::shutdownLibrary () [static]

Shutdown the ActiveMQ-CPP Library, freeing any resources that could not be freed up to this point. All the user created ActiveMQ-CPP objects and Decaf Library objects should have been destroyed by the time this method is called.

The documentation for this class was generated from the following file:

6.28.1 Constructor & Destructor Documentation

6.28.1.1 `activemq::commands::ActiveMQDestination::ActiveMQDestination ()`

6.28.1.2 `activemq::commands::ActiveMQDestination::ActiveMQDestination (const std::string & physicalName)`

6.28.1.3 `virtual
activemq::commands::ActiveMQDestination::~~ActiveMQDestination ()
[inline, virtual]`

6.28.2 Member Function Documentation

6.28.2.1 `virtual ActiveMQDestination* ac-
tivemq::commands::ActiveMQDestination::cloneDataStructure () const
[inline, virtual]`

Clone this object and return a new instance that the caller now owns, this will be an exact copy of this one.

Returns:

new copy of this object.

Implements `activemq::commands::DataStructure` (p. 1461).

Reimplemented in `activemq::commands::ActiveMQQueue` (p. 420),
`activemq::commands::ActiveMQTempDestination` (p. 500), **ac-**
`tivemq::commands::ActiveMQTempQueue` (p. 524), **ac-**
`tivemq::commands::ActiveMQTempTopic` (p. 549), and **ac-**
`tivemq::commands::ActiveMQTopic` (p. 599).

6.28.2.2 virtual void `activemq::commands::ActiveMQDestination::copyDataStructure` (const `DataStructure * src`) [virtual]

Copy the contents of the passed object into this objects members, overwriting any existing data.

Returns:

`src` - Source Object

Implements `activemq::commands::DataStructure` (p. 1462).

Reimplemented in `activemq::commands::ActiveMQQueue` (p. 420),
`activemq::commands::ActiveMQTempDestination` (p. 500), **ac-**
`tivemq::commands::ActiveMQTempQueue` (p. 525), **ac-**
`tivemq::commands::ActiveMQTempTopic` (p. 550), and **ac-**
`tivemq::commands::ActiveMQTopic` (p. 599).

Referenced by `activemq::commands::ActiveMQTempDestination::copyDataStructure()`.

6.28.2.3 static `Pointer<ActiveMQDestination> activemq::commands::ActiveMQDestination::createDestination` (int *type*, const std::string & *name*) [static]

Creates a Destination given the String Name to use and a Type.

Parameters:

type - The Type of Destination to Create

name - The Name to use in the creation of the Destination

Returns:

Pointer to a new `ActiveMQDestination` (p. 274) instance.

6.28.2.4 static std::string `activemq::commands::ActiveMQDestination::createTemporaryName` (const std::string & *clientId*) [inline, static]

Create a temporary name from the clientId.

Parameters:

clientId

Returns:

6.28.2.5 `virtual bool activemq::commands::ActiveMQDestination::equals (const DataStructure * value) const` [virtual]

Compares the **DataStructure** (p. 1461) passed in to this one, and returns if they are equivalent. Equivalent here means that they are of the same type, and that each element of the objects are the same.

Returns:

true if DataStructure's are Equal.

Implements **activemq::commands::DataStructure** (p. 1463).

Reimplemented in **activemq::commands::ActiveMQQueue** (p. 421),
activemq::commands::ActiveMQTempDestination (p. 501), **ac-**
tivemq::commands::ActiveMQTempQueue (p. 525), **ac-**
tivemq::commands::ActiveMQTempTopic (p. 550), and **ac-**
tivemq::commands::ActiveMQTopic (p. 600).

Referenced by **activemq::commands::ActiveMQTopic::equals()**, and **ac-**
tivemq::commands::ActiveMQTempDestination::equals().

6.28.2.6 `static std::string activemq::commands::ActiveMQDestination::getClientId (const ActiveMQDestination * destination)` [static]

From a temporary destination find the clientId of the Connection that created it.

Parameters:

destination

Returns:

the clientId or null if not a temporary destination

6.28.2.7 `virtual const cms::Destination* activemq::commands::ActiveMQDestination::getCMSDestination () const` [inline, virtual]

Returns:

the **cms::Destination** (p. 1480) interface pointer that the objects that derive from this class implement.

Reimplemented in **activemq::commands::ActiveMQQueue** (p. 421),
activemq::commands::ActiveMQTempQueue (p. 525), **ac-**
tivemq::commands::ActiveMQTempTopic (p. 550), and **ac-**
tivemq::commands::ActiveMQTopic (p. 600).

6.28.2.8 `virtual unsigned char activemq::commands::ActiveMQDestination::getDataStructureType () const` [virtual]

Get the **DataStructure** (p. 1461) Type as defined in CommandTypes.h.

Returns:

The type of the data structure

Implements **activemq::commands::DataStructure** (p. 1464).

Reimplemented in **activemq::commands::ActiveMQQueue** (p. 421),
activemq::commands::ActiveMQTempDestination (p. 501), **ac-**
tivemq::commands::ActiveMQTempQueue (p. 526), **ac-**
tivemq::commands::ActiveMQTempTopic (p. 551), and **ac-**
tivemq::commands::ActiveMQTopic (p. 600).

6.28.2.9 `virtual cms::Destination::DestinationType ac-`
`tivemq::commands::ActiveMQDestination::getDestinationType () const`
`[pure virtual]`

Returns the Type of Destination that this object represents.

Returns:

int type qualifier.

Implemented in **activemq::commands::ActiveMQQueue** (p. 422),
activemq::commands::ActiveMQTempQueue (p. 526), **ac-**
tivemq::commands::ActiveMQTempTopic (p. 551), and **ac-**
tivemq::commands::ActiveMQTopic (p. 601).

6.28.2.10 `const activemq::util::ActiveMQProperties& ac-`
`tivemq::commands::ActiveMQDestination::getOptions () const`
`[inline]`

Returns:

a reference (const) to the options properties for this Destination.

6.28.2.11 `virtual std::string ac-`
`tivemq::commands::ActiveMQDestination::getOrderedTarget () const`
`[inline, virtual]`

Returns:

Returns the orderedTarget.

6.28.2.12 `virtual std::string& ac-`
`tivemq::commands::ActiveMQDestination::getPhysicalName () [inline,`
`virtual]`

6.28.2.13 `virtual const std::string& ac-`
`tivemq::commands::ActiveMQDestination::getPhysicalName () const`
`[inline, virtual]`

Fetch this destination's physical name.

Returns:

const string containing the name

6.28.2.14 `virtual bool activemq::commands::ActiveMQDestination::isAdvisory () const [inline, virtual]`

Returns:

Returns the advisory.

6.28.2.15 `virtual bool activemq::commands::ActiveMQDestination::isComposite () const [inline, virtual]`

Returns true if this destination represents a collection of destinations; allowing a set of destinations to be published to or subscribed from in one CMS operation.

Returns:

true if this destination represents a collection of child destinations.

6.28.2.16 `virtual bool activemq::commands::ActiveMQDestination::isConnectionAdvisory () const [inline, virtual]`

Returns:

true if this is a destination for Connection advisories

6.28.2.17 `virtual bool activemq::commands::ActiveMQDestination::isConsumerAdvisory () const [inline, virtual]`

Returns:

true if this is a destination for Consumer advisories

6.28.2.18 `virtual bool activemq::commands::ActiveMQDestination::isExclusive () const [inline, virtual]`

Returns:

Returns the exclusive.

6.28.2.19 `virtual bool activemq::commands::ActiveMQDestination::isOrdered () const [inline, virtual]`

Returns:

Returns the ordered.

6.28.2.20 `virtual bool activemq::commands::ActiveMQDestination::isProducerAdvisory () const`
[inline, virtual]

Returns:

true if this is a destination for Producer advisories

6.28.2.21 `virtual bool activemq::commands::ActiveMQDestination::isQueue () const`
[inline, virtual]

Returns true if a Queue Destination.

Returns:

true/false

6.28.2.22 `virtual bool activemq::commands::ActiveMQDestination::isTemporary () const`
[inline, virtual]

Returns true if a temporary Destination.

Returns:

true/false

References cms::Destination::TEMPORARY_QUEUE, and cms::Destination::TEMPORARY_TOPIC.

6.28.2.23 `virtual bool activemq::commands::ActiveMQDestination::isTopic () const`
[inline, virtual]

Returns true if a Topic Destination.

Returns:

true/false

References cms::Destination::TEMPORARY_TOPIC, and cms::Destination::TOPIC.

6.28.2.24 `virtual bool activemq::commands::ActiveMQDestination::isWildcard () const`
[inline, virtual]

Returns:

true if the destination matches multiple possible destinations

6.28.2.25 `virtual void activemq::commands::ActiveMQDestination::setAdvisory (bool advisory)` [inline, virtual]

Parameters:

advisory The advisory to set.

6.28.2.26 `virtual void activemq::commands::ActiveMQDestination::setExclusive`
`(bool exclusive)` [inline, virtual]

Parameters:

exclusive The exclusive to set.

6.28.2.27 `virtual void activemq::commands::ActiveMQDestination::setOrdered`
`(bool ordered)` [inline, virtual]

Parameters:

ordered The ordered to set.

6.28.2.28 `virtual void ac-`
`tivemq::commands::ActiveMQDestination::setOrderedTarget (const`
`std::string & orderedTarget)` [inline, virtual]

Parameters:

orderedTarget The orderedTarget to set.

6.28.2.29 `virtual void ac-`
`tivemq::commands::ActiveMQDestination::setPhysicalName (const`
`std::string & physicalName)` [virtual]

Set this destination's physical name.

Returns:

const string containing the name

6.28.2.30 `virtual std::string activemq::commands::ActiveMQDestination::toString`
`() const` [virtual]

Returns a string containing the information for this **DataStructure** (p. 1461) such as its type and value of its elements.

Returns:

formatted string useful for debugging.

Reimplemented from `activemq::commands::BaseDataStructure` (p. 718).

Reimplemented in `activemq::commands::ActiveMQQueue` (p. 422),
`activemq::commands::ActiveMQTempDestination` (p. 501), `ac-`
`tivemq::commands::ActiveMQTempQueue` (p. 526), `ac-`
`tivemq::commands::ActiveMQTempTopic` (p. 551), and `ac-`
`tivemq::commands::ActiveMQTopic` (p. 601).

6.28.3 Field Documentation

6.28.3.1 `bool activemq::commands::ActiveMQDestination::advisory` [protected]

6.28.3.2 `const std::string
activemq::commands::ActiveMQDestination::ADVISORY_
PREFIX` [static, protected]

prefix for Advisory message destinations

- virtual void **tightUnmarshal** (**OpenWireFormat** *wireFormat, **commands::DataStructure** *dataStructure, **decaf::io::DataInputStream** *dataIn, **utils::BooleanStream** *bs) throw (**decaf::io::IOException**)

Un-marshal an object instance from the data input stream.

- virtual int **tightMarshal1** (**OpenWireFormat** *wireFormat, **commands::DataStructure** *dataStructure, **utils::BooleanStream** *bs) throw (**decaf::io::IOException**)

Write the booleans that this object uses to a BooleanStream.

- virtual void **tightMarshal2** (**OpenWireFormat** *wireFormat, **commands::DataStructure** *dataStructure, **decaf::io::DataOutputStream** *dataOut, **utils::BooleanStream** *bs) throw (**decaf::io::IOException**)

Write a object instance to data output stream.

- virtual void **looseUnmarshal** (**OpenWireFormat** *wireFormat, **commands::DataStructure** *dataStructure, **decaf::io::DataInputStream** *dataIn) throw (**decaf::io::IOException**)

Un-marshal an object instance from the data input stream.

- virtual void **looseMarshal** (**OpenWireFormat** *wireFormat, **commands::DataStructure** *dataStructure, **decaf::io::DataOutputStream** *dataOut) throw (**decaf::io::IOException**)

Write a object instance to data output stream.

6.29.1 Detailed Description

Marshaling code for Open Wire Format for **ActiveMQDestinationMarshaller** (p. 285).

NOTE!: This file is auto generated - do not modify! if you need to make a change, please see the Java Classes in the activemq-openwire-generator module

6.29.2 Constructor & Destructor Documentation

6.29.2.1 `activemq::wireformat::openwire::marshal::v3::ActiveMQDestinationMarshaller::ActiveMQDestinationMarshaller()` [inline]

6.29.2.2 `virtual activemq::wireformat::openwire::marshal::v3::ActiveMQDestinationMarshaller::~~ActiveMQDestinationMarshaller()` [inline, virtual]

6.29.3 Member Function Documentation

6.29.3.1 `virtual void activemq::wireformat::openwire::marshal::v3::ActiveMQDestinationMarshaller::looseMarshal(OpenWireFormat * wireFormat, commands::DataStructure * dataStructure, decaf::io::DataOutputStream * dataOut) throw (decaf::io::IOException)` [virtual]

Write a object instance to data output stream.

Parameters:

wireFormat - describes the wire format of the broker
dataStructure - Object to be marshaled
dataOut - BinaryWriter that provides that data sink

Exceptions:

IOException if an error occurs during the marshal.

Implements `activemq::wireformat::openwire::marshal::DataStreamMarshaller` (p. 1430).

Reimplemented in `activemq::wireformat::openwire::marshal::v3::ActiveMQQueueMarshaller` (p. 424), `activemq::wireformat::openwire::marshal::v3::ActiveMQTempDestinationMarshaller` (p. 504), `activemq::wireformat::openwire::marshal::v3::ActiveMQTempQueueMarshaller` (p. 529), `activemq::wireformat::openwire::marshal::v3::ActiveMQTempTopicMarshaller` (p. 554), and `activemq::wireformat::openwire::marshal::v3::ActiveMQTopicMarshaller` (p. 603).

6.29.3.2 `virtual void activemq::wireformat::openwire::marshal::v3::ActiveMQDestinationMarshaller::looseUnmarshal(OpenWireFormat * wireFormat, commands::DataStructure * dataStructure, decaf::io::DataInputStream * dataIn) throw (decaf::io::IOException)` [virtual]

Un-marshal an object instance from the data input stream.

Parameters:

wireFormat - describes the wire format of the broker
dataStructure - Object to be marshaled
dataIn - BinaryReader that provides that data source

Exceptions:

IOException if an error occurs during the unmarshal.

Implements `activemq::wireformat::openwire::marshal::DataStreamMarshaller` (p. 1436).

Reimplemented in `activemq::wireformat::openwire::marshal::v3::ActiveMQQueueMarshaller` (p. 425), `activemq::wireformat::openwire::marshal::v3::ActiveMQTempDestinationMarshaller` (p. 504), `activemq::wireformat::openwire::marshal::v3::ActiveMQTempQueueMarshaller` (p. 530), `activemq::wireformat::openwire::marshal::v3::ActiveMQTempTopicMarshaller` (p. 555), and `activemq::wireformat::openwire::marshal::v3::ActiveMQTopicMarshaller` (p. 604).

6.29.3.3 `virtual int activemq::wireformat::openwire::marshal::v3::ActiveMQDestinationMarshaller::tightMarshal2(OpenWireFormat * wireFormat, commands::DataStructure * dataStructure, utils::BooleanStream * bs) throw (decaf::io::IOException)` [virtual]

Write the booleans that this object uses to a BooleanStream.

Parameters:

- wireFormat* - describes the wire format of the broker
- dataStructure* - Object to be marshaled
- bs* - BooleanStream stream used to pack bits from the wire.

Returns:

int value indicating the size of the marshaled object.

Exceptions:

IOException if an error occurs during the marshal.

Implements `activemq::wireformat::openwire::marshal::DataStreamMarshaller` (p. 1442).

Reimplemented in `activemq::wireformat::openwire::marshal::v3::ActiveMQQueueMarshaller` (p. 425), `activemq::wireformat::openwire::marshal::v3::ActiveMQTempDestinationMarshaller` (p. 505), `activemq::wireformat::openwire::marshal::v3::ActiveMQTempQueueMarshaller` (p. 530), `activemq::wireformat::openwire::marshal::v3::ActiveMQTempTopicMarshaller` (p. 555), and `activemq::wireformat::openwire::marshal::v3::ActiveMQTopicMarshaller` (p. 604).

6.29.3.4 `virtual void activemq::wireformat::openwire::marshal::v3::ActiveMQDestinationMarshaller::tightMarshal2(OpenWireFormat * wireFormat, commands::DataStructure * dataStructure, decaf::io::DataOutputStream * dataOut, utils::BooleanStream * bs) throw (decaf::io::IOException)` [virtual]

Write a object instance to data output stream.

Parameters:

- wireFormat* - describes the wire format of the broker
- dataStructure* - Object to be marshaled
- dataOut* - BinaryReader that provides that data sink
- bs* - BooleanStream stream used to pack bits from the wire.

Exceptions:

IOException if an error occurs during the marshal.

Implements `activemq::wireformat::openwire::marshal::DataStreamMarshaller` (p. 1448).

Reimplemented in `activemq::wireformat::openwire::marshal::v3::ActiveMQQueueMarshaller` (p. 425), `activemq::wireformat::openwire::marshal::v3::ActiveMQTempDestinationMarshaller` (p. 505), `activemq::wireformat::openwire::marshal::v3::ActiveMQTempQueueMarshaller` (p. 530), `activemq::wireformat::openwire::marshal::v3::ActiveMQTempTopicMarshaller` (p. 555), and `activemq::wireformat::openwire::marshal::v3::ActiveMQTopicMarshaller` (p. 604).

6.29.3.5 `virtual void activemq::wireformat::openwire::marshal::v3::ActiveMQDestinationMarshaller::tightUnmarshal (OpenWireFormat * wireFormat, commands::DataStructure * dataStructure, decaf::io::DataInputStream * dataIn, utils::BooleanStream * bs) throw (decaf::io::IOException)` [virtual]

Un-marshal an object instance from the data input stream.

Parameters:

- wireFormat* - describes the wire format of the broker.
- dataStructure* - Object to be un-marshaled.
- dataIn* - BinaryReader that provides that data.
- bs* - BooleanStream stream used to unpack bits from the wire.

Exceptions:

IOException if an error occurs during the unmarshal.

Implements `activemq::wireformat::openwire::marshal::DataStreamMarshaller` (p. 1454).

Reimplemented in `activemq::wireformat::openwire::marshal::v3::ActiveMQQueueMarshaller` (p. 426), `activemq::wireformat::openwire::marshal::v3::ActiveMQTempDestinationMarshaller` (p. 506), `activemq::wireformat::openwire::marshal::v3::ActiveMQTempQueueMarshaller` (p. 531), `activemq::wireformat::openwire::marshal::v3::ActiveMQTempTopicMarshaller` (p. 556), and `activemq::wireformat::openwire::marshal::v3::ActiveMQTopicMarshaller` (p. 605).

The documentation for this class was generated from the following file:

6.30.2 Constructor & Destructor Documentation

6.30.2.1 `activemq::wireformat::openwire::marshal::v1::ActiveMQDestinationMarshaller::ActiveMQDestinationMarshaller()` [inline]

6.30.2.2 `virtual activemq::wireformat::openwire::marshal::v1::ActiveMQDestinationMarshaller::~~ActiveMQDestinationMarshaller()` [inline, virtual]

6.30.3 Member Function Documentation

6.30.3.1 `virtual void activemq::wireformat::openwire::marshal::v1::ActiveMQDestinationMarshaller::marshal(const OpenWireFormat * wireFormat, const commands::DataStructure * dataStructure, decaf::io::DataOutputStream * dataOut) throw (decaf::io::IOException)` [virtual]

Write a object instance to data output stream.

Parameters:

wireFormat - describes the wire format of the broker
dataStructure - Object to be marshaled
dataOut - BinaryWriter that provides that data sink

Exceptions:

IOException if an error occurs during the marshal.

Implements `activemq::wireformat::openwire::marshal::DataStreamMarshaller` (p. 1430).

Reimplemented in `activemq::wireformat::openwire::marshal::v1::ActiveMQQueueMarshaller` (p. 428), `activemq::wireformat::openwire::marshal::v1::ActiveMQTempDestinationMarshaller` (p. 508), `activemq::wireformat::openwire::marshal::v1::ActiveMQTempQueueMarshaller` (p. 533), `activemq::wireformat::openwire::marshal::v1::ActiveMQTempTopicMarshaller` (p. 558), and `activemq::wireformat::openwire::marshal::v1::ActiveMQTopicMarshaller` (p. 607).

6.30.3.2 `virtual void activemq::wireformat::openwire::marshal::v1::ActiveMQDestinationMarshaller::unmarshal(const OpenWireFormat * wireFormat, const commands::DataStructure * dataStructure, decaf::io::DataInputStream * dataIn) throw (decaf::io::IOException)` [virtual]

Un-marshall an object instance from the data input stream.

Parameters:

wireFormat - describes the wire format of the broker
dataStructure - Object to be marshaled
dataIn - BinaryReader that provides that data source

Exceptions:

IOException if an error occurs during the unmarshal.

Implements `activemq::wireformat::openwire::marshal::DataStreamMarshaller` (p. 1436).

Reimplemented in `activemq::wireformat::openwire::marshal::v1::ActiveMQQueueMarshaller` (p. 429), `activemq::wireformat::openwire::marshal::v1::ActiveMQTempDestinationMarshaller` (p. 508), `activemq::wireformat::openwire::marshal::v1::ActiveMQTempQueueMarshaller` (p. 534), `activemq::wireformat::openwire::marshal::v1::ActiveMQTempTopicMarshaller` (p. 559), and `activemq::wireformat::openwire::marshal::v1::ActiveMQTopicMarshaller` (p. 608).

6.30.3.3 `virtual int activemq::wireformat::openwire::marshal::v1::ActiveMQDestinationMarshaller::tightMarshal2(OpenWireFormat * wireFormat, commands::DataStructure * dataStructure, utils::BooleanStream * bs) throw (decaf::io::IOException)` [virtual]

Write the booleans that this object uses to a BooleanStream.

Parameters:

- wireFormat* - describes the wire format of the broker
- dataStructure* - Object to be marshaled
- bs* - BooleanStream stream used to pack bits from the wire.

Returns:

int value indicating the size of the marshaled object.

Exceptions:

IOException if an error occurs during the marshal.

Implements `activemq::wireformat::openwire::marshal::DataStreamMarshaller` (p. 1442).

Reimplemented in `activemq::wireformat::openwire::marshal::v1::ActiveMQQueueMarshaller` (p. 429), `activemq::wireformat::openwire::marshal::v1::ActiveMQTempDestinationMarshaller` (p. 509), `activemq::wireformat::openwire::marshal::v1::ActiveMQTempQueueMarshaller` (p. 534), `activemq::wireformat::openwire::marshal::v1::ActiveMQTempTopicMarshaller` (p. 559), and `activemq::wireformat::openwire::marshal::v1::ActiveMQTopicMarshaller` (p. 608).

6.30.3.4 `virtual void activemq::wireformat::openwire::marshal::v1::ActiveMQDestinationMarshaller::tightMarshal2(OpenWireFormat * wireFormat, commands::DataStructure * dataStructure, decaf::io::DataOutputStream * dataOut, utils::BooleanStream * bs) throw (decaf::io::IOException)` [virtual]

Write a object instance to data output stream.

Parameters:

- wireFormat* - describes the wire format of the broker
- dataStructure* - Object to be marshaled
- dataOut* - BinaryReader that provides that data sink
- bs* - BooleanStream stream used to pack bits from the wire.

Exceptions:

IOException if an error occurs during the marshal.

Implements `activemq::wireformat::openwire::marshal::DataStreamMarshaller` (p. 1448).

Reimplemented in `activemq::wireformat::openwire::marshal::v1::ActiveMQQueueMarshaller` (p. 429), `activemq::wireformat::openwire::marshal::v1::ActiveMQTempDestinationMarshaller` (p. 509), `activemq::wireformat::openwire::marshal::v1::ActiveMQTempQueueMarshaller` (p. 534), `activemq::wireformat::openwire::marshal::v1::ActiveMQTempTopicMarshaller` (p. 559), and `activemq::wireformat::openwire::marshal::v1::ActiveMQTopicMarshaller` (p. 608).

6.30.3.5 `virtual void activemq::wireformat::openwire::marshal::v1::ActiveMQDestinationMarshaller::tightUnmarshal (OpenWireFormat * wireFormat, commands::DataStructure * dataStructure, decaf::io::DataInputStream * dataIn, utils::BooleanStream * bs) throw (decaf::io::IOException)` [virtual]

Un-marshal an object instance from the data input stream.

Parameters:

- wireFormat*** - describes the wire format of the broker.
- dataStructure*** - Object to be un-marshaled.
- dataIn*** - BinaryReader that provides that data.
- bs*** - BooleanStream stream used to unpack bits from the wire.

Exceptions:

IOException if an error occurs during the unmarshal.

Implements `activemq::wireformat::openwire::marshal::DataStreamMarshaller` (p. 1454).

Reimplemented in `activemq::wireformat::openwire::marshal::v1::ActiveMQQueueMarshaller` (p. 430), `activemq::wireformat::openwire::marshal::v1::ActiveMQTempDestinationMarshaller` (p. 510), `activemq::wireformat::openwire::marshal::v1::ActiveMQTempQueueMarshaller` (p. 535), `activemq::wireformat::openwire::marshal::v1::ActiveMQTempTopicMarshaller` (p. 560), and `activemq::wireformat::openwire::marshal::v1::ActiveMQTopicMarshaller` (p. 609).

The documentation for this class was generated from the following file:

6.31.3 Member Function Documentation

6.31.3.1 `virtual void activemq::wireformat::openwire::marshal::v4::ActiveMQDestinationMarshaller::looseMarshal(OpenWireFormat * wireFormat, commands::DataStructure * dataStructure, decaf::io::DataOutputStream * dataOut) throw (decaf::io::IOException)` [virtual]

Write a object instance to data output stream.

Parameters:

wireFormat - describes the wire format of the broker
dataStructure - Object to be marshaled
dataOut - BinaryWriter that provides that data sink

Exceptions:

IOException if an error occurs during the marshal.

Implements `activemq::wireformat::openwire::marshal::DataStreamMarshaller` (p. 1430).

Reimplemented in `activemq::wireformat::openwire::marshal::v4::ActiveMQQueueMarshaller` (p. 432), `activemq::wireformat::openwire::marshal::v4::ActiveMQTempDestinationMarshaller` (p. 512), `activemq::wireformat::openwire::marshal::v4::ActiveMQTempQueueMarshaller` (p. 537), `activemq::wireformat::openwire::marshal::v4::ActiveMQTempTopicMarshaller` (p. 562), and `activemq::wireformat::openwire::marshal::v4::ActiveMQTopicMarshaller` (p. 611).

6.31.3.2 `virtual void activemq::wireformat::openwire::marshal::v4::ActiveMQDestinationMarshaller::looseUnmarshal(OpenWireFormat * wireFormat, commands::DataStructure * dataStructure, decaf::io::DataInputStream * dataIn) throw (decaf::io::IOException)` [virtual]

Un-marshall an object instance from the data input stream.

Parameters:

wireFormat - describes the wire format of the broker
dataStructure - Object to be marshaled
dataIn - BinaryReader that provides that data source

Exceptions:

IOException if an error occurs during the unmarshal.

Implements `activemq::wireformat::openwire::marshal::DataStreamMarshaller` (p. 1436).

Reimplemented in `activemq::wireformat::openwire::marshal::v4::ActiveMQQueueMarshaller` (p. 433), `activemq::wireformat::openwire::marshal::v4::ActiveMQTempDestinationMarshaller` (p. 512), `activemq::wireformat::openwire::marshal::v4::ActiveMQTempQueueMarshaller` (p. 538), `activemq::wireformat::openwire::marshal::v4::ActiveMQTempTopicMarshaller` (p. 563), and `activemq::wireformat::openwire::marshal::v4::ActiveMQTopicMarshaller` (p. 612).

6.31.3.3 `virtual int activemq::wireformat::openwire::marshal::v4::ActiveMQDestinationMarshaller::tightMarshal2(OpenWireFormat * wireFormat, commands::DataStructure * dataStructure, utils::BooleanStream * bs) throw (decaf::io::IOException)` [virtual]

Write the booleans that this object uses to a BooleanStream.

Parameters:

- wireFormat* - describes the wire format of the broker
- dataStructure* - Object to be marshaled
- bs* - BooleanStream stream used to pack bits from the wire.

Returns:

int value indicating the size of the marshaled object.

Exceptions:

IOException if an error occurs during the marshal.

Implements `activemq::wireformat::openwire::marshal::DataStreamMarshaller` (p. 1442).

Reimplemented in `activemq::wireformat::openwire::marshal::v4::ActiveMQQueueMarshaller` (p. 433), `activemq::wireformat::openwire::marshal::v4::ActiveMQTempDestinationMarshaller` (p. 513), `activemq::wireformat::openwire::marshal::v4::ActiveMQTempQueueMarshaller` (p. 538), `activemq::wireformat::openwire::marshal::v4::ActiveMQTempTopicMarshaller` (p. 563), and `activemq::wireformat::openwire::marshal::v4::ActiveMQTopicMarshaller` (p. 612).

6.31.3.4 `virtual void activemq::wireformat::openwire::marshal::v4::ActiveMQDestinationMarshaller::tightMarshal2(OpenWireFormat * wireFormat, commands::DataStructure * dataStructure, decaf::io::DataOutputStream * dataOut, utils::BooleanStream * bs) throw (decaf::io::IOException)` [virtual]

Write a object instance to data output stream.

Parameters:

- wireFormat* - describes the wire format of the broker
- dataStructure* - Object to be marshaled
- dataOut* - BinaryReader that provides that data sink
- bs* - BooleanStream stream used to pack bits from the wire.

Exceptions:

IOException if an error occurs during the marshal.

Implements `activemq::wireformat::openwire::marshal::DataStreamMarshaller` (p. 1448).

Reimplemented in `activemq::wireformat::openwire::marshal::v4::ActiveMQQueueMarshaller` (p. 433), `activemq::wireformat::openwire::marshal::v4::ActiveMQTempDestinationMarshaller` (p. 513), `activemq::wireformat::openwire::marshal::v4::ActiveMQTempQueueMarshaller` (p. 538), `activemq::wireformat::openwire::marshal::v4::ActiveMQTempTopicMarshaller` (p. 563), and `activemq::wireformat::openwire::marshal::v4::ActiveMQTopicMarshaller` (p. 612).

6.31.3.5 `virtual void activemq::wireformat::openwire::marshal::v4::ActiveMQDestinationMarshaller::tightUnmarshal (OpenWireFormat * wireFormat, commands::DataStructure * dataStructure, decaf::io::DataInputStream * dataIn, utils::BooleanStream * bs) throw (decaf::io::IOException)` [virtual]

Un-marshal an object instance from the data input stream.

Parameters:

- wireFormat*** - describes the wire format of the broker.
- dataStructure*** - Object to be un-marshaled.
- dataIn*** - BinaryReader that provides that data.
- bs*** - BooleanStream stream used to unpack bits from the wire.

Exceptions:

IOException if an error occurs during the unmarshal.

Implements `activemq::wireformat::openwire::marshal::DataStreamMarshaller` (p. 1454).

Reimplemented in `activemq::wireformat::openwire::marshal::v4::ActiveMQQueueMarshaller` (p. 434), `activemq::wireformat::openwire::marshal::v4::ActiveMQTempDestinationMarshaller` (p. 514), `activemq::wireformat::openwire::marshal::v4::ActiveMQTempQueueMarshaller` (p. 539), `activemq::wireformat::openwire::marshal::v4::ActiveMQTempTopicMarshaller` (p. 564), and `activemq::wireformat::openwire::marshal::v4::ActiveMQTopicMarshaller` (p. 613).

6.32.3 Member Function Documentation

6.32.3.1 `virtual void activemq::wireformat::openwire::marshal::v5::ActiveMQDestinationMarshaller::looseMarshal(OpenWireFormat * wireFormat, commands::DataStructure * dataStructure, decaf::io::DataOutputStream * dataOut) throw (decaf::io::IOException)` [virtual]

Write a object instance to data output stream.

Parameters:

wireFormat - describes the wire format of the broker

dataStructure - Object to be marshaled

dataOut - BinaryWriter that provides that data sink

Exceptions:

IOException if an error occurs during the marshal.

Implements `activemq::wireformat::openwire::marshal::DataStreamMarshaller` (p. 1430).

Reimplemented in `activemq::wireformat::openwire::marshal::v5::ActiveMQQueueMarshaller` (p. 436), `activemq::wireformat::openwire::marshal::v5::ActiveMQTempDestinationMarshaller` (p. 516), `activemq::wireformat::openwire::marshal::v5::ActiveMQTempQueueMarshaller` (p. 541), `activemq::wireformat::openwire::marshal::v5::ActiveMQTempTopicMarshaller` (p. 566), and `activemq::wireformat::openwire::marshal::v5::ActiveMQTopicMarshaller` (p. 615).

6.32.3.2 `virtual void activemq::wireformat::openwire::marshal::v5::ActiveMQDestinationMarshaller::looseUnmarshal(OpenWireFormat * wireFormat, commands::DataStructure * dataStructure, decaf::io::DataInputStream * dataIn) throw (decaf::io::IOException)` [virtual]

Un-marshall an object instance from the data input stream.

Parameters:

wireFormat - describes the wire format of the broker

dataStructure - Object to be marshaled

dataIn - BinaryReader that provides that data source

Exceptions:

IOException if an error occurs during the unmarshal.

Implements `activemq::wireformat::openwire::marshal::DataStreamMarshaller` (p. 1436).

Reimplemented in `activemq::wireformat::openwire::marshal::v5::ActiveMQQueueMarshaller` (p. 437), `activemq::wireformat::openwire::marshal::v5::ActiveMQTempDestinationMarshaller` (p. 516), `activemq::wireformat::openwire::marshal::v5::ActiveMQTempQueueMarshaller` (p. 542), `activemq::wireformat::openwire::marshal::v5::ActiveMQTempTopicMarshaller` (p. 567), and `activemq::wireformat::openwire::marshal::v5::ActiveMQTopicMarshaller` (p. 616).

6.32.3.3 `virtual int activemq::wireformat::openwire::marshal::v5::ActiveMQDestinationMarshaller::tightMarshal2(OpenWireFormat * wireFormat, commands::DataStructure * dataStructure, utils::BooleanStream * bs) throw (decaf::io::IOException)` [virtual]

Write the booleans that this object uses to a BooleanStream.

Parameters:

- wireFormat* - describes the wire format of the broker
- dataStructure* - Object to be marshaled
- bs* - BooleanStream stream used to pack bits from the wire.

Returns:

int value indicating the size of the marshaled object.

Exceptions:

IOException if an error occurs during the marshal.

Implements `activemq::wireformat::openwire::marshal::DataStreamMarshaller` (p. 1442).

Reimplemented in `activemq::wireformat::openwire::marshal::v5::ActiveMQQueueMarshaller` (p. 437), `activemq::wireformat::openwire::marshal::v5::ActiveMQTempDestinationMarshaller` (p. 517), `activemq::wireformat::openwire::marshal::v5::ActiveMQTempQueueMarshaller` (p. 542), `activemq::wireformat::openwire::marshal::v5::ActiveMQTempTopicMarshaller` (p. 567), and `activemq::wireformat::openwire::marshal::v5::ActiveMQTopicMarshaller` (p. 616).

6.32.3.4 `virtual void activemq::wireformat::openwire::marshal::v5::ActiveMQDestinationMarshaller::tightMarshal2(OpenWireFormat * wireFormat, commands::DataStructure * dataStructure, decaf::io::DataOutputStream * dataOut, utils::BooleanStream * bs) throw (decaf::io::IOException)` [virtual]

Write a object instance to data output stream.

Parameters:

- wireFormat* - describes the wire format of the broker
- dataStructure* - Object to be marshaled
- dataOut* - BinaryReader that provides that data sink
- bs* - BooleanStream stream used to pack bits from the wire.

Exceptions:

IOException if an error occurs during the marshal.

Implements `activemq::wireformat::openwire::marshal::DataStreamMarshaller` (p. 1448).

Reimplemented in `activemq::wireformat::openwire::marshal::v5::ActiveMQQueueMarshaller` (p. 437), `activemq::wireformat::openwire::marshal::v5::ActiveMQTempDestinationMarshaller` (p. 517), `activemq::wireformat::openwire::marshal::v5::ActiveMQTempQueueMarshaller` (p. 542), `activemq::wireformat::openwire::marshal::v5::ActiveMQTempTopicMarshaller` (p. 567), and `activemq::wireformat::openwire::marshal::v5::ActiveMQTopicMarshaller` (p. 616).

6.32.3.5 virtual void `activemq::wireformat::openwire::marshal::v5::ActiveMQDestinationMarshaller::tightUnmarshal (OpenWireFormat * wireFormat, commands::DataStructure * dataStructure, decaf::io::DataInputStream * dataIn, utils::BooleanStream * bs) throw (decaf::io::IOException)` [virtual]

Un-marshal an object instance from the data input stream.

Parameters:

- wireFormat* - describes the wire format of the broker.
- dataStructure* - Object to be un-marshaled.
- dataIn* - BinaryReader that provides that data.
- bs* - BooleanStream stream used to unpack bits from the wire.

Exceptions:

IOException if an error occurs during the unmarshal.

Implements `activemq::wireformat::openwire::marshal::DataStreamMarshaller` (p. 1454).

Reimplemented in `activemq::wireformat::openwire::marshal::v5::ActiveMQQueueMarshaller` (p. 438), `activemq::wireformat::openwire::marshal::v5::ActiveMQTempDestinationMarshaller` (p. 518), `activemq::wireformat::openwire::marshal::v5::ActiveMQTempQueueMarshaller` (p. 543), `activemq::wireformat::openwire::marshal::v5::ActiveMQTempTopicMarshaller` (p. 568), and `activemq::wireformat::openwire::marshal::v5::ActiveMQTopicMarshaller` (p. 617).

6.33.2 Constructor & Destructor Documentation

6.33.2.1 `activemq::wireformat::openwire::marshal::v2::ActiveMQDestinationMarshaller::ActiveMQDestinationMarshaller()` [inline]

6.33.2.2 `virtual activemq::wireformat::openwire::marshal::v2::ActiveMQDestinationMarshaller::~~ActiveMQDestinationMarshaller()` [inline, virtual]

6.33.3 Member Function Documentation

6.33.3.1 `virtual void activemq::wireformat::openwire::marshal::v2::ActiveMQDestinationMarshaller::looseMarshal(OpenWireFormat * wireFormat, commands::DataStructure * dataStructure, decaf::io::DataOutputStream * dataOut) throw (decaf::io::IOException)` [virtual]

Write a object instance to data output stream.

Parameters:

wireFormat - describes the wire format of the broker

dataStructure - Object to be marshaled

dataOut - BinaryWriter that provides that data sink

Exceptions:

IOException if an error occurs during the marshal.

Implements `activemq::wireformat::openwire::marshal::DataStreamMarshaller` (p. 1430).

Reimplemented in `activemq::wireformat::openwire::marshal::v2::ActiveMQQueueMarshaller` (p. 440), `activemq::wireformat::openwire::marshal::v2::ActiveMQTempDestinationMarshaller` (p. 520), `activemq::wireformat::openwire::marshal::v2::ActiveMQTempQueueMarshaller` (p. 545), `activemq::wireformat::openwire::marshal::v2::ActiveMQTempTopicMarshaller` (p. 570), and `activemq::wireformat::openwire::marshal::v2::ActiveMQTopicMarshaller` (p. 619).

6.33.3.2 `virtual void activemq::wireformat::openwire::marshal::v2::ActiveMQDestinationMarshaller::looseUnmarshal(OpenWireFormat * wireFormat, commands::DataStructure * dataStructure, decaf::io::DataInputStream * dataIn) throw (decaf::io::IOException)` [virtual]

Un-marshall an object instance from the data input stream.

Parameters:

wireFormat - describes the wire format of the broker

dataStructure - Object to be marshaled

dataIn - BinaryReader that provides that data source

Exceptions:

IOException if an error occurs during the unmarshal.

Implements `activemq::wireformat::openwire::marshal::DataStreamMarshaller` (p. 1436).

Reimplemented in `activemq::wireformat::openwire::marshal::v2::ActiveMQQueueMarshaller` (p. 441), `activemq::wireformat::openwire::marshal::v2::ActiveMQTempDestinationMarshaller` (p. 520), `activemq::wireformat::openwire::marshal::v2::ActiveMQTempQueueMarshaller` (p. 546), `activemq::wireformat::openwire::marshal::v2::ActiveMQTempTopicMarshaller` (p. 571), and `activemq::wireformat::openwire::marshal::v2::ActiveMQTopicMarshaller` (p. 620).

6.33.3.3 `virtual int activemq::wireformat::openwire::marshal::v2::ActiveMQDestinationMarshaller::tightMarshal2(OpenWireFormat * wireFormat, commands::DataStructure * dataStructure, utils::BooleanStream * bs) throw (decaf::io::IOException)` [virtual]

Write the booleans that this object uses to a BooleanStream.

Parameters:

- wireFormat* - describes the wire format of the broker
- dataStructure* - Object to be marshaled
- bs* - BooleanStream stream used to pack bits from the wire.

Returns:

int value indicating the size of the marshaled object.

Exceptions:

IOException if an error occurs during the marshal.

Implements `activemq::wireformat::openwire::marshal::DataStreamMarshaller` (p. 1442).

Reimplemented in `activemq::wireformat::openwire::marshal::v2::ActiveMQQueueMarshaller` (p. 441), `activemq::wireformat::openwire::marshal::v2::ActiveMQTempDestinationMarshaller` (p. 521), `activemq::wireformat::openwire::marshal::v2::ActiveMQTempQueueMarshaller` (p. 546), `activemq::wireformat::openwire::marshal::v2::ActiveMQTempTopicMarshaller` (p. 571), and `activemq::wireformat::openwire::marshal::v2::ActiveMQTopicMarshaller` (p. 620).

6.33.3.4 `virtual void activemq::wireformat::openwire::marshal::v2::ActiveMQDestinationMarshaller::tightMarshal2(OpenWireFormat * wireFormat, commands::DataStructure * dataStructure, decaf::io::DataOutputStream * dataOut, utils::BooleanStream * bs) throw (decaf::io::IOException)` [virtual]

Write a object instance to data output stream.

Parameters:

- wireFormat* - describes the wire format of the broker
- dataStructure* - Object to be marshaled
- dataOut* - BinaryReader that provides that data sink
- bs* - BooleanStream stream used to pack bits from the wire.

Exceptions:

IOException if an error occurs during the marshal.

Implements `activemq::wireformat::openwire::marshal::DataStreamMarshaller` (p. 1448).

Reimplemented in `activemq::wireformat::openwire::marshal::v2::ActiveMQQueueMarshaller` (p. 441), `activemq::wireformat::openwire::marshal::v2::ActiveMQTempDestinationMarshaller` (p. 521), `activemq::wireformat::openwire::marshal::v2::ActiveMQTempQueueMarshaller` (p. 546), `activemq::wireformat::openwire::marshal::v2::ActiveMQTempTopicMarshaller` (p. 571), and `activemq::wireformat::openwire::marshal::v2::ActiveMQTopicMarshaller` (p. 620).

6.33.3.5 virtual void `activemq::wireformat::openwire::marshal::v2::ActiveMQDestinationMarshaller::tightUnmarshal (OpenWireFormat * wireFormat, commands::DataStructure * dataStructure, decaf::io::DataInputStream * dataIn, utils::BooleanStream * bs) throw (decaf::io::IOException)` [virtual]

Un-marshal an object instance from the data input stream.

Parameters:

wireFormat - describes the wire format of the broker.
dataStructure - Object to be un-marshaled.
dataIn - BinaryReader that provides that data.
bs - BooleanStream stream used to unpack bits from the wire.

Exceptions:

IOException if an error occurs during the unmarshal.

Implements `activemq::wireformat::openwire::marshal::DataStreamMarshaller` (p. 1454).

Reimplemented in `activemq::wireformat::openwire::marshal::v2::ActiveMQQueueMarshaller` (p. 442), `activemq::wireformat::openwire::marshal::v2::ActiveMQTempDestinationMarshaller` (p. 522), `activemq::wireformat::openwire::marshal::v2::ActiveMQTempQueueMarshaller` (p. 547), `activemq::wireformat::openwire::marshal::v2::ActiveMQTempTopicMarshaller` (p. 572), and `activemq::wireformat::openwire::marshal::v2::ActiveMQTopicMarshaller` (p. 621).

The documentation for this class was generated from the following file:

- `src/main/activemq/wireformat/openwire/marshal/v2/ActiveMQDestinationMarshaller.h`

6.34 activemq::exceptions::ActiveMQException Class Reference

#include <src/main/activemq/exceptions/ActiveMQException.h> Inheritance diagram for activemq::exceptions::ActiveMQException:

Public Member Functions

- **ActiveMQException** () throw ()
Default Constructor.
- **ActiveMQException** (const **ActiveMQException** &ex) throw ()
Copy Constructor.
- **ActiveMQException** (const **decaf::lang::Exception** &ex) throw ()
Copy Constructor.
- **ActiveMQException** (const char *file, const int lineNumber, const char *msg,...) throw ()
Constructor - Initializes the file name and line number where this message occurred.
- virtual ~**ActiveMQException** () throw ()
- virtual **ActiveMQException** * **clone** () const
Clones this exception.
- virtual **cms::CMSException** **convertToCMSException** () const
Converts this exception to a new CMSException.

6.34.1 Constructor & Destructor Documentation

6.34.1.1 activemq::exceptions::ActiveMQException::ActiveMQException () throw ()

Default Constructor.

6.34.1.2 activemq::exceptions::ActiveMQException::ActiveMQException (const ActiveMQException & ex) throw ()

Copy Constructor.

Parameters:

ex The Exception whose internal data is copied into this instance.

6.34.1.3 `activemq::exceptions::ActiveMQException::ActiveMQException (const decaf::lang::Exception & ex) throw ()`

Copy Constructor.

Parameters:

ex The Exception whose internal data is copied into this instance.

6.34.1.4 `activemq::exceptions::ActiveMQException::ActiveMQException (const char * file, const int lineNumber, const char * msg, ...) throw ()`

Constructor - Initializes the file name and line number where this message occurred. Sets the message to report, using an optional list of arguments to parse into the message.

Parameters:

file The file name where exception occurs.

lineNumber The line number where the exception occurred.

msg The message to report.

... The list of primitives that are formatted into the message.

6.34.1.5 `virtual activemq::exceptions::ActiveMQException::~~ActiveMQException () throw () [virtual]`

6.34.2 Member Function Documentation

6.34.2.1 `virtual ActiveMQException* activemq::exceptions::ActiveMQException::clone () const [virtual]`

Clones this exception. This is useful for cases where you need to preserve the type of the original exception as well as the message. All subclasses should override.

Returns:

Copy of this Exception object

Reimplemented from `decaf::lang::Exception` (p. 1577).

Reimplemented in `activemq::exceptions::BrokerException` (p. 749).

6.34.2.2 `virtual cms::CMSEException activemq::exceptions::ActiveMQException::convertToCMSEException () const [virtual]`

Converts this exception to a new CMSEException.

Returns:

a CMSEException with the data from this exception

The documentation for this class was generated from the following file:

- `src/main/activemq/exceptions/ActiveMQException.h`

6.35 activemq::commands::ActiveMQMapMessage Class Reference

#include <src/main/activemq/commands/ActiveMQMapMessage.h> Inheritance diagram for activemq::commands::ActiveMQMapMessage:

Public Member Functions

- **ActiveMQMapMessage** ()
- virtual **~ActiveMQMapMessage** ()
- virtual unsigned char **getDataStructureType** () const
Get the unique identifier that this object and its own Marshaler share.
- virtual bool **isMarshalAware** () const
Determine if this object is aware of marshaling and should have its before and after marshaling methods called.
- virtual **ActiveMQMapMessage * cloneDataStructure** () const
Clone this object and return a new instance that the caller now owns, this will be an exact copy of this one.
- virtual void **copyDataStructure** (const **DataStructure** *src)
Copy the contents of the passed object into this objects members, overwriting any existing data.
- virtual void **beforeMarshal** (**wireformat::WireFormat** *wireFormat) throw (decaf::io::IOException)
Perform any processing needed before an marshal.
- virtual std::string **toString** () const
*Returns a string containing the information for this **DataStructure** (p. 1461) such as its type and value of its elements.*
- virtual bool **equals** (const **DataStructure** *value) const
*Compares the **DataStructure** (p. 1461) passed in to this one, and returns if they are equivalent.*
- virtual void **clearBody** () throw (cms::CMSEException)
Clears out the body of the message.
- virtual **cms::MapMessage * clone** () const
Clone this message exactly, returns a new instance that the caller is required to delete.
- virtual std::vector< std::string > **getMapNames** () const throw (cms::CMSEException)
Returns an Enumeration of all the names in the MapMessage object.
- virtual bool **itemExists** (const std::string &name) const throw (cms::CMSEException)
Indicates whether an item exists in this MapMessage object.

- virtual bool **getBoolean** (const std::string &name) const throw (cms::MessageFormatException, cms::CMSEException)
Returns the Boolean value of the Specified name.
- virtual void **setBoolean** (const std::string &name, bool value) throw (cms::MessageNotWriteableException, cms::CMSEException)
Sets a boolean value with the specified name into the Map.
- virtual unsigned char **getByte** (const std::string &name) const throw (cms::MessageFormatException, cms::CMSEException)
Returns the Byte value of the Specified name.
- virtual void **setByte** (const std::string &name, unsigned char value) throw (cms::MessageNotWriteableException, cms::CMSEException)
Sets a Byte value with the specified name into the Map.
- virtual std::vector< unsigned char > **getBytes** (const std::string &name) const throw (cms::MessageFormatException, cms::CMSEException)
Returns the Bytes value of the Specified name.
- virtual void **setBytes** (const std::string &name, const std::vector< unsigned char > &value) throw (cms::MessageNotWriteableException, cms::CMSEException)
Sets a Bytes value with the specified name into the Map.
- virtual char **getChar** (const std::string &name) const throw (cms::MessageFormatException, cms::CMSEException)
Returns the Char value of the Specified name.
- virtual void **setChar** (const std::string &name, char value) throw (cms::MessageNotWriteableException, cms::CMSEException)
Sets a Char value with the specified name into the Map.
- virtual double **getDouble** (const std::string &name) const throw (cms::MessageFormatException, cms::CMSEException)
Returns the Double value of the Specified name.
- virtual void **setDouble** (const std::string &name, double value) throw (cms::MessageNotWriteableException, cms::CMSEException)
Sets a Double value with the specified name into the Map.
- virtual float **getFloat** (const std::string &name) const throw (cms::MessageFormatException, cms::CMSEException)
Returns the Float value of the Specified name.
- virtual void **setFloat** (const std::string &name, float value) throw (cms::MessageNotWriteableException, cms::CMSEException)
Sets a Float value with the specified name into the Map.
- virtual int **getInt** (const std::string &name) const throw (cms::MessageFormatException, cms::CMSEException)
Returns the Int value of the Specified name.

- virtual void **setInt** (const std::string &name, int value) throw (cms::MessageNotWriteableException, cms::CMSEException)
Sets a Int value with the specified name into the Map.
- virtual long long **getLong** (const std::string &name) const throw (cms::MessageFormatException, cms::CMSEException)
Returns the Long value of the Specified name.
- virtual void **setLong** (const std::string &name, long long value) throw (cms::MessageNotWriteableException, cms::CMSEException)
Sets a Long value with the specified name into the Map.
- virtual short **getShort** (const std::string &name) const throw (cms::MessageFormatException, cms::CMSEException)
Returns the Short value of the Specified name.
- virtual void **setShort** (const std::string &name, short value) throw (cms::MessageNotWriteableException, cms::CMSEException)
Sets a Short value with the specified name into the Map.
- virtual std::string **getString** (const std::string &name) const throw (cms::MessageFormatException, cms::CMSEException)
Returns the String value of the Specified name.
- virtual void **setString** (const std::string &name, const std::string &value) throw (cms::MessageNotWriteableException, cms::CMSEException)
Sets a String value with the specified name into the Map.

Static Public Attributes

- static const unsigned char **ID_ACTIVEMQMAPMESSAGE** = 25

Protected Member Functions

- **util::PrimitiveMap & getMap** () throw (decaf::lang::exceptions::NullPointerException)
Fetches a reference to this objects PrimitiveMap, if one needs to be created or unmarshaled, this will perform the correct steps.
- const **util::PrimitiveMap & getMap** () const throw (decaf::lang::exceptions::NullPointerException)
- virtual void **checkMapIsUnmarshalled** () const throw (decaf::lang::exceptions::NullPointerException)
Performs the unmarshal on the Map if needed, otherwise just returns.

6.35.1 Constructor & Destructor Documentation

6.35.1.1 `activemq::commands::ActiveMQMapMessage::ActiveMQMapMessage ()`

6.35.1.2 `virtual
activemq::commands::ActiveMQMapMessage::~~ActiveMQMapMessage ()
[virtual]`

6.35.2 Member Function Documentation

6.35.2.1 `virtual void activemq::commands::ActiveMQMapMessage::beforeMarshal
(wireformat::WireFormat * wireFormat) throw (decaf::io::IOException)
[virtual]`

Perform any processing needed before an marshal.

Parameters:

wireFormat - the OpenWireFormat object in use.

Implements `activemq::wireformat::MarshalAware` (p. 2119).

6.35.2.2 `virtual void ac-
tivemq::commands::ActiveMQMapMessage::checkMapIsUnmarshalled ()
const throw (decaf::lang::exceptions::NullPointerException) [protected,
virtual]`

Performs the unmarshal on the Map if needed, otherwise just returns.

6.35.2.3 `virtual void activemq::commands::ActiveMQMapMessage::clearBody ()
throw (cms::CMSException) [virtual]`

Clears out the body of the message. This does not clear the headers or properties.

Reimplemented from `activemq::commands::ActiveMQMessageTemplate< cms::MapMessage >` (p. 368).

6.35.2.4 `virtual cms::MapMessage* ac-
tivemq::commands::ActiveMQMapMessage::clone () const
[inline, virtual]`

Clone this message exactly, returns a new instance that the caller is required to delete.

Returns:

new copy of this message

Implements `cms::Message` (p. 2168).

6.35.2.5 `virtual ActiveMQMapMessage* activemq::commands::ActiveMQMapMessage::cloneDataStructure () const [virtual]`

Clone this object and return a new instance that the caller now owns, this will be an exact copy of this one.

Returns:

new copy of this object.

Reimplemented from `activemq::commands::Message` (p. 2149).

6.35.2.6 `virtual void activemq::commands::ActiveMQMapMessage::copyDataStructure (const DataStructure * src) [virtual]`

Copy the contents of the passed object into this objects members, overwriting any existing data.

Returns:

src - Source Object

Reimplemented from `activemq::commands::Message` (p. 2150).

6.35.2.7 `virtual bool activemq::commands::ActiveMQMapMessage::equals (const DataStructure * value) const [virtual]`

Compares the `DataStructure` (p. 1461) passed in to this one, and returns if they are equivalent. Equivalent here means that they are of the same type, and that each element of the objects are the same.

Returns:

true if `DataStructure`'s are Equal.

Reimplemented from `activemq::commands::ActiveMQMessageTemplate< cms::MapMessage >` (p. 369).

6.35.2.8 `virtual bool activemq::commands::ActiveMQMapMessage::getBoolean (const std::string & name) const throw (cms::MessageFormatException, cms::CMSException) [virtual]`

Returns the Boolean value of the Specified name.

Parameters:

name Name of the value to fetch from the map

Exceptions:

CMSException - if the operation fails due to an internal error.

MessageFormatException - if this type conversion is invalid.

Implements `cms::MapMessage` (p. 2108).

6.35.2.9 `virtual unsigned char activemq::commands::ActiveMQMapMessage::getByte (const std::string & name) const throw (cms::MessageFormatException, cms::CMSException) [virtual]`

Returns the Byte value of the Specified name.

Parameters:

name Name of the value to fetch from the map

Exceptions:

CMSException - if the operation fails due to an internal error.

MessageFormatException - if this type conversion is invalid.

Implements `cms::MapMessage` (p. 2109).

6.35.2.10 `virtual std::vector<unsigned char> activemq::commands::ActiveMQMapMessage::getBytes (const std::string & name) const throw (cms::MessageFormatException, cms::CMSException) [virtual]`

Returns the Bytes value of the Specified name.

Parameters:

name Name of the value to fetch from the map

Exceptions:

CMSException - if the operation fails due to an internal error.

MessageFormatException - if this type conversion is invalid.

Implements `cms::MapMessage` (p. 2109).

6.35.2.11 `virtual char activemq::commands::ActiveMQMapMessage::getChar (const std::string & name) const throw (cms::MessageFormatException, cms::CMSException) [virtual]`

Returns the Char value of the Specified name.

Parameters:

name name of the value to fetch from the map

Exceptions:

CMSException - if the operation fails due to an internal error.

MessageFormatException - if this type conversion is invalid.

Implements `cms::MapMessage` (p. 2109).

6.35.2.12 `virtual unsigned char activemq::commands::ActiveMQMapMessage::getDataStructureType () const [virtual]`

Get the unique identifier that this object and its own Marshaler share.

Returns:

new **DataStructure** (p. 1461) type copy.

Reimplemented from **activemq::commands::Message** (p. 2152).

6.35.2.13 `virtual double activemq::commands::ActiveMQMapMessage::getDouble (const std::string & name) const throw (cms::MessageFormatException, cms::CMSException) [virtual]`

Returns the Double value of the Specified name.

Parameters:

name Name of the value to fetch from the map

Exceptions:

CMSException - if the operation fails due to an internal error.

MessageFormatException - if this type conversion is invalid.

Implements **cms::MapMessage** (p. 2110).

6.35.2.14 `virtual float activemq::commands::ActiveMQMapMessage::getFloat (const std::string & name) const throw (cms::MessageFormatException, cms::CMSException) [virtual]`

Returns the Float value of the Specified name.

Parameters:

name Name of the value to fetch from the map

Exceptions:

CMSException - if the operation fails due to an internal error.

MessageFormatException - if this type conversion is invalid.

Implements **cms::MapMessage** (p. 2110).

6.35.2.15 `virtual int activemq::commands::ActiveMQMapMessage::getInt (const std::string & name) const throw (cms::MessageFormatException, cms::CMSException) [virtual]`

Returns the Int value of the Specified name.

Parameters:

name Name of the value to fetch from the map

Exceptions:

CMSEException - if the operation fails due to an internal error.

MessageFormatException - if this type conversion is invalid.

Implements **cms::MapMessage** (p. 2110).

6.35.2.16 `virtual long long activemq::commands::ActiveMQMapMessage::getLong (const std::string & name) const throw (cms::MessageFormatException, cms::CMSEException)` [virtual]

Returns the Long value of the Specified name.

Parameters:

name Name of the value to fetch from the map

Exceptions:

CMSEException - if the operation fails due to an internal error.

MessageFormatException - if this type conversion is invalid.

Implements **cms::MapMessage** (p. 2111).

6.35.2.17 `const util::PrimitiveMap& activemq::commands::ActiveMQMapMessage::getMap () const throw (decaf::lang::exceptions::NullPointerException)` [protected]

6.35.2.18 `util::PrimitiveMap& activemq::commands::ActiveMQMapMessage::getMap () throw (decaf::lang::exceptions::NullPointerException)` [protected]

Fetches a reference to this objects PrimitiveMap, if one needs to be created or unmarshaled, this will perform the correct steps.

Returns:

reference to a PrimitiveMap.

6.35.2.19 `virtual std::vector< std::string > activemq::commands::ActiveMQMapMessage::getMapNames () const throw (cms::CMSEException)` [virtual]

Returns an Enumeration of all the names in the MapMessage object.

Returns:

STL Vector of String values, each of which is the name of an item in the MapMessage

Exceptions:

CMSEException - if the operation fails due to an internal error.

Implements **cms::MapMessage** (p. 2111).

6.35.2.20 `virtual short activemq::commands::ActiveMQMapMessage::getShort
(const std::string & name) const throw (cms::MessageFormatException,
cms::CMSException) [virtual]`

Returns the Short value of the Specified name.

Parameters:

name Name of the value to fetch from the map

Exceptions:

CMSException - if the operation fails due to an internal error.

MessageFormatException - if this type conversion is invalid.

Implements `cms::MapMessage` (p. 2111).

6.35.2.21 `virtual std::string ac-
tivismq::commands::ActiveMQMapMessage::getString
(const std::string & name) const throw (cms::MessageFormatException,
cms::CMSException) [virtual]`

Returns the String value of the Specified name.

Parameters:

name Name of the value to fetch from the map

Exceptions:

CMSException - if the operation fails due to an internal error.

MessageFormatException - if this type conversion is invalid.

Implements `cms::MapMessage` (p. 2111).

6.35.2.22 `virtual bool ac-
tivismq::commands::ActiveMQMapMessage::isMarshalAware () const
[inline, virtual]`

Determine if this object is aware of marshaling and should have its before and after marshaling methods called. Defaults to false.

Returns:

true if aware of marshaling

Reimplemented from `activemq::commands::Message` (p. 2155).

6.35.2.23 `virtual bool activemq::commands::ActiveMQMapMessage::itemExists
(const std::string & name) const throw (cms::CMSException)
[virtual]`

Indicates whether an item exists in this MapMessage object.

Parameters:

name String name of the Object in question

Returns:

boolean value indicating if the name is in the map

Exceptions:

CMSEException - if the operation fails due to an internal error.

Implements **cms::MapMessage** (p. 2112).

6.35.2.24 `virtual void activemq::commands::ActiveMQMapMessage::setBoolean (const std::string & name, bool value) throw (cms::MessageNotWriteableException, cms::CMSEException)` [virtual]

Sets a boolean value with the specified name into the Map.

Parameters:

name the name of the boolean

value the boolean value to set in the Map

Exceptions:

CMSEException - if the operation fails due to an internal error.

MessageNotWriteableException - if the **Message** (p. 2145) is in Read-only Mode.

Implements **cms::MapMessage** (p. 2112).

6.35.2.25 `virtual void activemq::commands::ActiveMQMapMessage::setByte (const std::string & name, unsigned char value) throw (cms::MessageNotWriteableException, cms::CMSEException)` [virtual]

Sets a Byte value with the specified name into the Map.

Parameters:

name the name of the Byte

value the Byte value to set in the Map

Exceptions:

CMSEException - if the operation fails due to an internal error.

MessageNotWriteableException - if the **Message** (p. 2145) is in Read-only Mode.

Implements **cms::MapMessage** (p. 2112).

6.35.2.26 `virtual void activemq::commands::ActiveMQMapMessage::setBytes (const std::string & name, const std::vector< unsigned char > & value) throw (cms::MessageNotWriteableException, cms::CMSException) [virtual]`

Sets a Bytes value with the specified name into the Map.

Parameters:

name The name of the Bytes

value The Bytes value to set in the Map

Exceptions:

CMSException - if the operation fails due to an internal error.

MessageNotWriteableException - if the Message (p. 2145) is in Read-only Mode.

Implements `cms::MapMessage` (p. 2113).

6.35.2.27 `virtual void activemq::commands::ActiveMQMapMessage::setChar (const std::string & name, char value) throw (cms::MessageNotWriteableException, cms::CMSException) [virtual]`

Sets a Char value with the specified name into the Map.

Parameters:

name the name of the Char

value the Char value to set in the Map

Exceptions:

CMSException - if the operation fails due to an internal error.

MessageNotWriteableException - if the Message (p. 2145) is in Read-only Mode.

Implements `cms::MapMessage` (p. 2113).

6.35.2.28 `virtual void activemq::commands::ActiveMQMapMessage::setDouble (const std::string & name, double value) throw (cms::MessageNotWriteableException, cms::CMSException) [virtual]`

Sets a Double value with the specified name into the Map.

Parameters:

name The name of the Double

value The Double value to set in the Map

Exceptions:

CMSException - if the operation fails due to an internal error.

MessageNotWriteableException - if the Message (p. 2145) is in Read-only Mode.

Implements `cms::MapMessage` (p. 2114).

6.35.2.29 `virtual void activemq::commands::ActiveMQMapMessage::setFloat (const std::string & name, float value) throw (cms::MessageNotWriteableException, cms::CMSEException) [virtual]`

Sets a Float value with the specified name into the Map.

Parameters:

name The name of the Float

value The Float value to set in the Map

Exceptions:

CMSEException - if the operation fails due to an internal error.

MessageNotWriteableException - if the Message (p. 2145) is in Read-only Mode.

Implements `cms::MapMessage` (p. 2114).

6.35.2.30 `virtual void activemq::commands::ActiveMQMapMessage::setInt (const std::string & name, int value) throw (cms::MessageNotWriteableException, cms::CMSEException) [virtual]`

Sets a Int value with the specified name into the Map.

Parameters:

name The name of the Int

value The Int value to set in the Map

Exceptions:

CMSEException - if the operation fails due to an internal error.

MessageNotWriteableException - if the Message (p. 2145) is in Read-only Mode.

Implements `cms::MapMessage` (p. 2114).

6.35.2.31 `virtual void activemq::commands::ActiveMQMapMessage::setLong (const std::string & name, long long value) throw (cms::MessageNotWriteableException, cms::CMSEException) [virtual]`

Sets a Long value with the specified name into the Map.

Parameters:

name The name of the Long

value The Long value to set in the Map

Exceptions:

CMSEException - if the operation fails due to an internal error.

MessageNotWriteableException - if the Message (p. 2145) is in Read-only Mode.

Implements `cms::MapMessage` (p. 2115).

6.35.2.32 `virtual void activemq::commands::ActiveMQMapMessage::setShort (const std::string & name, short value) throw (cms::MessageNotWriteableException, cms::CMSException) [virtual]`

Sets a Short value with the specified name into the Map.

Parameters:

name The name of the Short
value The Short value to set in the Map

Exceptions:

CMSException - if the operation fails due to an internal error.
MessageNotWriteableException - if the **Message** (p. 2145) is in Read-only Mode.

Implements **cms::MapMessage** (p. 2115).

6.35.2.33 `virtual void activemq::commands::ActiveMQMapMessage::setString (const std::string & name, const std::string & value) throw (cms::MessageNotWriteableException, cms::CMSException) [virtual]`

Sets a String value with the specified name into the Map.

Parameters:

name The name of the String
value The String value to set in the Map

Exceptions:

CMSException - if the operation fails due to an internal error.
MessageNotWriteableException - if the **Message** (p. 2145) is in Read-only Mode.

Implements **cms::MapMessage** (p. 2115).

6.35.2.34 `virtual std::string activemq::commands::ActiveMQMapMessage::toString () const [virtual]`

Returns a string containing the information for this **DataStructure** (p. 1461) such as its type and value of its elements.

Returns:

formatted string useful for debugging.

Reimplemented from **activemq::commands::Message** (p. 2159).

6.35.3 Field Documentation

6.35.3.1 `const unsigned char activemq::commands::ActiveMQMapMessage::ID_ - ACTIVEMQMAPMESSAGE = 25 [static]`

The documentation for this class was generated from the following file:

- `src/main/activemq/commands/ActiveMQMapMessage.h`

6.36 activemq::wireformat::openwire::marshal::v3::ActiveMQMapMessageMarshaller Class Reference

Marshaling code for Open Wire Format for **ActiveMQMapMessageMarshaller** (p. 322).

#include <src/main/activemq/wireformat/openwire/marshal/v3/ActiveMQMapMessageMarshaller.h> Inheritance diagram for activemq::wireformat::openwire::marshal::v3::ActiveMQMapMessageMarshaller:

Public Member Functions

- **ActiveMQMapMessageMarshaller** ()
- virtual **~ActiveMQMapMessageMarshaller** ()

Write the booleans that this object uses to a BooleanStream.
- virtual void **tightMarshal2** (**OpenWireFormat *wireFormat**, **commands::DataStructure *dataStructure**, **decaf::io::DataOutputStream *dataOut**, **utils::BooleanStream *bs**) throw (**decaf::io::IOException**)
Write a object instance to data output stream.
- virtual void **looseUnmarshal** (**OpenWireFormat *wireFormat**, **commands::DataStructure *dataStructure**, **decaf::io::DataInputStream *dataIn**) throw (**decaf::io::IOException**)
Un-marshal an object instance from the data input stream.
- virtual void **looseMarshal** (**OpenWireFormat *wireFormat**, **commands::DataStructure *dataStructure**, **decaf::io::DataOutputStream *dataOut**) throw (**decaf::io::IOException**)
Write a object instance to data output stream.

6.36.1 Detailed Description

Marshaling code for Open Wire Format for **ActiveMQMapMessageMarshaller** (p. 322).

NOTE!: This file is auto generated - do not modify! if you need to make a change, please see the Java Classes in the activemq-openwire-generator module

6.36.2 Constructor & Destructor Documentation

6.36.2.1 `activemq::wireformat::openwire::marshal::v3::ActiveMQMapMessageMarshaller::ActiveMQMapMessageMarshaller()` `[inline]`

6.36.2.2 `virtual activemq::wireformat::openwire::marshal::v3::ActiveMQMapMessageMarshaller::~~ActiveMQMapMessageMarshaller()` `[inline, virtual]`

6.36.3 Member Function Documentation

6.36.3.1 `virtual commands::DataStructure* activemq::wireformat::openwire::marshal::v3::ActiveMQMapMessageMarshaller::createObject(const std::string & name) const` `[virtual]`

Creates a new instance of this marshalable type.

Returns:

new DataStructure object pointer caller owns it.

Implements `activemq::wireformat::openwire::marshal::DataStreamMarshaller` (p. 1419).

6.36.3.2 `virtual unsigned char activemq::wireformat::openwire::marshal::v3::ActiveMQMapMessageMarshaller::getDataStructureType() const` `[virtual]`

Get the Data Structure Type that identifies this Marshaler.

Returns:

byte holding the data structure type value

Implements `activemq::wireformat::openwire::marshal::DataStreamMarshaller` (p. 1424).

6.36.3.3 `virtual void activemq::wireformat::openwire::marshal::v3::ActiveMQMapMessageMarshaller::looseMarshal(const commands::DataStructure* dataStructure, decaf::io::DataOutputStream* dataOut) throw (decaf::io::IOException)` `[virtual]`

Write a object instance to data output stream.

Parameters:

wireFormat - describes the wire format of the broker

dataStructure - Object to be marshaled

dataOut - BinaryWriter that provides that data sink

Exceptions:

IOException if an error occurs during the marshal.

Reimplemented from `activemq::wireformat::openwire::marshal::v3::MessageMarshaller` (p. 2316).

6.36.3.4 `virtual void activemq::wireformat::openwire::marshal::v3::ActiveMQMapMessageMarshaller::looseUnmarshal(OpenWireFormat * wireFormat, commands::DataStructure * dataStructure, decaf::io::DataInputStream * dataIn) throw (decaf::io::IOException)` [virtual]

Un-marshall an object instance from the data input stream.

Parameters:

wireFormat - describes the wire format of the broker

dataStructure - Object to be marshaled

dataIn - BinaryReader that provides that data source

Exceptions:

IOException if an error occurs during the unmarshal.

Reimplemented from `activemq::wireformat::openwire::marshal::v3::MessageMarshaller` (p. 2316).

6.36.3.5 `virtual int activemq::wireformat::openwire::marshal::v3::ActiveMQMapMessageMarshaller::tightMarshal(OpenWireFormat * wireFormat, commands::DataStructure * dataStructure, utils::BooleanStream * bs) throw (decaf::io::IOException)` [virtual]

Write the booleans that this object uses to a BooleanStream.

Parameters:

wireFormat - describes the wire format of the broker

dataStructure - Object to be marshaled

bs - BooleanStream stream used to pack bits from the wire.

Returns:

int value indicating the size of the marshaled object.

Exceptions:

IOException if an error occurs during the marshal.

Reimplemented from `activemq::wireformat::openwire::marshal::v3::MessageMarshaller` (p. 2317).

6.36.3.6 `virtual void activemq::wireformat::openwire::marshal::v3::ActiveMQMapMessageMarshaller::tightMarshal(OpenWireFormat * wireFormat, commands::DataStructure * dataStructure, decaf::io::DataOutputStream * dataOut, utils::BooleanStream * bs) throw (decaf::io::IOException)` [virtual]

Write a object instance to data output stream.

Parameters:

wireFormat - describes the wire format of the broker
dataStructure - Object to be marshaled
dataOut - BinaryReader that provides that data sink
bs - BooleanStream stream used to pack bits from the wire.

Exceptions:

IOException if an error occurs during the marshal.

Reimplemented from `activemq::wireformat::openwire::marshal::v3::MessageMarshaller` (p. 2318).

6.36.3.7 `virtual void activemq::wireformat::openwire::marshal::v3::ActiveMQMapMessageMarshaller::tightUnmarshal(OpenWireFormat * wireFormat, commands::DataStructure * dataStructure, decaf::io::DataInputStream * dataIn, utils::BooleanStream * bs) throw (decaf::io::IOException)` [virtual]

Un-marshall an object instance from the data input stream.

Parameters:

wireFormat - describes the wire format of the broker.
dataStructure - Object to be un-marshaled.
dataIn - BinaryReader that provides that data.
bs - BooleanStream stream used to unpack bits from the wire.

Exceptions:

IOException if an error occurs during the unmarshal.

Reimplemented from `activemq::wireformat::openwire::marshal::v3::MessageMarshaller` (p. 2318).

The documentation for this class was generated from the following file:

Write a object instance to data output stream.

6.37.1 Detailed Description

Marshaling code for Open Wire Format for **ActiveMQMapMessageMarshaller** (p. 326).

NOTE!: This file is auto generated - do not modify! if you need to make a change, please see the Java Classes in the activemq-openwire-generator module

6.37.2 Constructor & Destructor Documentation

6.37.2.1 `activemq::wireformat::openwire::marshal::v1::ActiveMQMapMessageMarshaller::ActiveMQMapMessageMarshaller()` `[inline]`

6.37.2.2 `virtual activemq::wireformat::openwire::marshal::v1::ActiveMQMapMessageMarshaller::~~ActiveMQMapMessageMarshaller()` `[inline, virtual]`

6.37.3 Member Function Documentation

6.37.3.1 `virtual commands::DataStructure* activemq::wireformat::openwire::marshal::v1::ActiveMQMapMessageMarshaller::createObject(const std::string& name) const` `[virtual]`

Creates a new instance of this marshalable type.

Returns:

new DataStructure object pointer caller owns it.

Implements `activemq::wireformat::openwire::marshal::DataStreamMarshaller` (p. 1419).

6.37.3.2 `virtual unsigned char activemq::wireformat::openwire::marshal::v1::ActiveMQMapMessageMarshaller::getDataStructureType() const` `[virtual]`

Get the Data Structure Type that identifies this Marshaler.

Returns:

byte holding the data structure type value

Implements `activemq::wireformat::openwire::marshal::DataStreamMarshaller` (p. 1424).

6.37.3.3 `virtual void activemq::wireformat::openwire::marshal::v1::ActiveMQMapMessageMarshaller::looseMarshal(commands::DataStructure* dataStructure, decaf::io::DataOutputStream* dataOut) throw (decaf::io::IOException)` `[virtual]`

Write a object instance to data output stream.

Parameters:

wireFormat - describes the wire format of the broker

dataStructure - Object to be marshaled

dataOut - BinaryWriter that provides that data sink

Exceptions:

IOException if an error occurs during the marshal.

Reimplemented from `activemq::wireformat::openwire::marshal::v1::MessageMarshaller` (p. 2326).

6.37.3.4 `virtual void activemq::wireformat::openwire::marshal::v1::ActiveMQMapMessageMarshaller::looseUnmarshal(OpenWireFormat * wireFormat, commands::DataStructure * dataStructure, decaf::io::DataInputStream * dataIn) throw (decaf::io::IOException)` [virtual]

Un-marshall an object instance from the data input stream.

Parameters:

wireFormat - describes the wire format of the broker

dataStructure - Object to be marshaled

dataIn - BinaryReader that provides that data source

Exceptions:

IOException if an error occurs during the unmarshal.

Reimplemented from `activemq::wireformat::openwire::marshal::v1::MessageMarshaller` (p. 2326).

6.37.3.5 `virtual int activemq::wireformat::openwire::marshal::v1::ActiveMQMapMessageMarshaller::tightMarshal(OpenWireFormat * wireFormat, commands::DataStructure * dataStructure, utils::BooleanStream * bs) throw (decaf::io::IOException)` [virtual]

Write the booleans that this object uses to a BooleanStream.

Parameters:

wireFormat - describes the wire format of the broker

dataStructure - Object to be marshaled

bs - BooleanStream stream used to pack bits from the wire.

Returns:

int value indicating the size of the marshaled object.

Exceptions:

IOException if an error occurs during the marshal.

Reimplemented from `activemq::wireformat::openwire::marshal::v1::MessageMarshaller` (p. 2327).

6.37.3.6 virtual void activemq::wireformat::openwire::marshal::v1::ActiveMQMapMessageMarshaller::tightMarshal (OpenWireFormat * *wireFormat*, commands::DataStructure * *dataStructure*, decaf::io::DataOutputStream * *dataOut*, utils::BooleanStream * *bs*) throw (decaf::io::IOException) [virtual]

Write a object instance to data output stream.

Parameters:

wireFormat - describes the wire format of the broker
dataStructure - Object to be marshaled
dataOut - BinaryReader that provides that data sink
bs - BooleanStream stream used to pack bits from the wire.

Exceptions:

IOException if an error occurs during the marshal.

Reimplemented from **activemq::wireformat::openwire::marshal::v1::MessageMarshaller** (p. 2328).

6.37.3.7 virtual void activemq::wireformat::openwire::marshal::v1::ActiveMQMapMessageMarshaller::tightUnmarshal (OpenWireFormat * *wireFormat*, commands::DataStructure * *dataStructure*, decaf::io::DataInputStream * *dataIn*, utils::BooleanStream * *bs*) throw (decaf::io::IOException) [virtual]

Un-marshall an object instance from the data input stream.

Parameters:

wireFormat - describes the wire format of the broker.
dataStructure - Object to be un-marshaled.
dataIn - BinaryReader that provides that data.
bs - BooleanStream stream used to unpack bits from the wire.

Exceptions:

IOException if an error occurs during the unmarshal.

Reimplemented from **activemq::wireformat::openwire::marshal::v1::MessageMarshaller** (p. 2328).

Write the booleans that this object uses to a BooleanStream.

Parameters:

wireFormat - describes the wire format of the broker

dataStructure - Object to be marshaled

bs - BooleanStream stream used to pack bits from the wire.

Returns:

int value indicating the size of the marshaled object.

Exceptions:

IOException if an error occurs during the marshal.

Reimplemented from `activemq::wireformat::openwire::marshal::v4::MessageMarshaller` (p. 2312).

6.38.3.6 `virtual void activemq::wireformat::openwire::marshal::v4::ActiveMQMapMessageMarshaller::tightMarshal(OpenWireFormat * wireFormat, commands::DataStructure * dataStructure, decaf::io::DataOutputStream * dataOut, utils::BooleanStream * bs) throw (decaf::io::IOException)` [virtual]

Write a object instance to data output stream.

Parameters:

wireFormat - describes the wire format of the broker
dataStructure - Object to be marshaled
dataOut - BinaryReader that provides that data sink
bs - BooleanStream stream used to pack bits from the wire.

Exceptions:

IOException if an error occurs during the marshal.

Reimplemented from `activemq::wireformat::openwire::marshal::v4::MessageMarshaller` (p. 2313).

6.38.3.7 `virtual void activemq::wireformat::openwire::marshal::v4::ActiveMQMapMessageMarshaller::tightUnmarshal(OpenWireFormat * wireFormat, commands::DataStructure * dataStructure, decaf::io::DataInputStream * dataIn, utils::BooleanStream * bs) throw (decaf::io::IOException)` [virtual]

Un-marshall an object instance from the data input stream.

Parameters:

wireFormat - describes the wire format of the broker.
dataStructure - Object to be un-marshaled.
dataIn - BinaryReader that provides that data.
bs - BooleanStream stream used to unpack bits from the wire.

Exceptions:

IOException if an error occurs during the unmarshal.

Reimplemented from `activemq::wireformat::openwire::marshal::v4::MessageMarshaller` (p. 2313).

6.39.1 Detailed Description

Marshaling code for Open Wire Format for **ActiveMQMapMessageMarshaller** (p. 334).

NOTE!: This file is auto generated - do not modify! if you need to make a change, please see the Java Classes in the activemq-openwire-generator module

6.39.2 Constructor & Destructor Documentation

6.39.2.1 `activemq::wireformat::openwire::marshal::v5::ActiveMQMapMessageMarshaller::ActiveMQMapMessageMarshaller()` `[inline]`

6.39.2.2 `virtual activemq::wireformat::openwire::marshal::v5::ActiveMQMapMessageMarshaller::~~ActiveMQMapMessageMarshaller()` `[inline, virtual]`

6.39.3 Member Function Documentation

6.39.3.1 `virtual commands::DataStructure* activemq::wireformat::openwire::marshal::v5::ActiveMQMapMessageMarshaller::createObject(const std::string& name) const` `[virtual]`

Creates a new instance of this marshalable type.

Returns:

new DataStructure object pointer caller owns it.

Implements `activemq::wireformat::openwire::marshal::DataStreamMarshaller` (p. 1419).

6.39.3.2 `virtual unsigned char activemq::wireformat::openwire::marshal::v5::ActiveMQMapMessageMarshaller::getDataStructureType() const` `[virtual]`

Get the Data Structure Type that identifies this Marshaler.

Returns:

byte holding the data structure type value

Implements `activemq::wireformat::openwire::marshal::DataStreamMarshaller` (p. 1424).

6.39.3.3 `virtual void activemq::wireformat::openwire::marshal::v5::ActiveMQMapMessageMarshaller::looseMarshal(commands::DataStructure* dataStructure, decaf::io::DataOutputStream* dataOut) throw (decaf::io::IOException)` `[virtual]`

Write a object instance to data output stream.

Parameters:

wireFormat - describes the wire format of the broker

dataStructure - Object to be marshaled

dataOut - BinaryWriter that provides that data sink

Exceptions:

IOException if an error occurs during the marshal.

Reimplemented from `activemq::wireformat::openwire::marshal::v5::MessageMarshaller` (p. 2321).

6.39.3.4 `virtual void activemq::wireformat::openwire::marshal::v5::ActiveMQMapMessageMarshaller::looseUnmarshal (OpenWireFormat * wireFormat, commands::DataStructure * dataStructure, decaf::io::DataInputStream * dataIn) throw (decaf::io::IOException)` [virtual]

Un-marshall an object instance from the data input stream.

Parameters:

wireFormat - describes the wire format of the broker

dataStructure - Object to be marshaled

dataIn - BinaryReader that provides that data source

Exceptions:

IOException if an error occurs during the unmarshal.

Reimplemented from `activemq::wireformat::openwire::marshal::v5::MessageMarshaller` (p. 2321).

6.39.3.5 `virtual int activemq::wireformat::openwire::marshal::v5::ActiveMQMapMessageMarshaller::tightMarshal (OpenWireFormat * wireFormat, commands::DataStructure * dataStructure, utils::BooleanStream * bs) throw (decaf::io::IOException)` [virtual]

Write the booleans that this object uses to a BooleanStream.

Parameters:

wireFormat - describes the wire format of the broker

dataStructure - Object to be marshaled

bs - BooleanStream stream used to pack bits from the wire.

Returns:

int value indicating the size of the marshaled object.

Exceptions:

IOException if an error occurs during the marshal.

Reimplemented from `activemq::wireformat::openwire::marshal::v5::MessageMarshaller` (p. 2322).

6.39.3.6 virtual void activemq::wireformat::openwire::marshal::v5::ActiveMQMapMessageMarshaller::tightMarshal (OpenWireFormat * *wireFormat*, commands::DataStructure * *dataStructure*, decaf::io::DataOutputStream * *dataOut*, utils::BooleanStream * *bs*) throw (decaf::io::IOException) [virtual]

Write a object instance to data output stream.

Parameters:

wireFormat - describes the wire format of the broker
dataStructure - Object to be marshaled
dataOut - BinaryReader that provides that data sink
bs - BooleanStream stream used to pack bits from the wire.

Exceptions:

IOException if an error occurs during the marshal.

Reimplemented from `activemq::wireformat::openwire::marshal::v5::MessageMarshaller` (p. 2323).

6.39.3.7 virtual void activemq::wireformat::openwire::marshal::v5::ActiveMQMapMessageMarshaller::tightUnmarshal (OpenWireFormat * *wireFormat*, commands::DataStructure * *dataStructure*, decaf::io::DataInputStream * *dataIn*, utils::BooleanStream * *bs*) throw (decaf::io::IOException) [virtual]

Un-marshall an object instance from the data input stream.

Parameters:

wireFormat - describes the wire format of the broker.
dataStructure - Object to be un-marshaled.
dataIn - BinaryReader that provides that data.
bs - BooleanStream stream used to unpack bits from the wire.

Exceptions:

IOException if an error occurs during the unmarshal.

Reimplemented from `activemq::wireformat::openwire::marshal::v5::MessageMarshaller` (p. 2323).

The documentation for this class was generated from the following file:

- virtual unsigned char **getDataStructureType** () const
Get the Data Structure Type that identifies this Marshaler.
- virtual void **tightUnmarshal** (**OpenWireFormat *wireFormat**, **commands::DataStructure *dataStructure**, **decaf::io::DataInputStream *dataIn**, **utils::BooleanStream *bs**) throw (**decaf::io::IOException**)
Un-marshal an object instance from the data input stream.
- virtual int **tightMarshal1** (**OpenWireFormat *wireFormat**, **commands::DataStructure *dataStructure**, **utils::BooleanStream *bs**) throw (**decaf::io::IOException**)
Write the booleans that this object uses to a BooleanStream.
- virtual void **tightMarshal2** (**OpenWireFormat *wireFormat**, **commands::DataStructure *dataStructure**, **decaf::io::DataOutputStream *dataOut**, **utils::BooleanStream *bs**) throw (**decaf::io::IOException**)
Write a object instance to data output stream.
- virtual void **looseUnmarshal** (**OpenWireFormat *wireFormat**, **commands::DataStructure *dataStructure**, **decaf::io::DataInputStream *dataIn**) throw (**decaf::io::IOException**)
Un-marshal an object instance from the data input stream.
- virtual void **looseMarshal** (**OpenWireFormat *wireFormat**, **commands::DataStructure *dataStructure**, **decaf::io::DataOutputStream *dataOut**) throw (**decaf::io::IOException**)
Write a object instance to data output stream.

6.40.1 Detailed Description

Marshaling code for Open Wire Format for **ActiveMQMapMessageMarshaller** (p. 338).

NOTE!: This file is auto generated - do not modify! if you need to make a change, please see the Java Classes in the activemq-openwire-generator module

6.40.2 Constructor & Destructor Documentation

6.40.2.1 `activemq::wireformat::openwire::marshal::v2::ActiveMQMapMessageMarshaller::ActiveMQMapMessageMarshaller()` [inline]

6.40.2.2 `virtual activemq::wireformat::openwire::marshal::v2::ActiveMQMapMessageMarshaller::~~ActiveMQMapMessageMarshaller()` [inline, virtual]

6.40.3 Member Function Documentation

6.40.3.1 `virtual commands::DataStructure* activemq::wireformat::openwire::marshal::v2::ActiveMQMapMessageMarshaller::createObject(const std::string& name) const` [virtual]

Creates a new instance of this marshalable type.

Returns:

new DataStructure object pointer caller owns it.

Implements `activemq::wireformat::openwire::marshal::DataStreamMarshaller` (p. 1419).

6.40.3.2 `virtual unsigned char activemq::wireformat::openwire::marshal::v2::ActiveMQMapMessageMarshaller::getDataStructureType() const` [virtual]

Get the Data Structure Type that identifies this Marshaler.

Returns:

byte holding the data structure type value

Implements `activemq::wireformat::openwire::marshal::DataStreamMarshaller` (p. 1424).

6.40.3.3 `virtual void activemq::wireformat::openwire::marshal::v2::ActiveMQMapMessageMarshaller::looseMarshal(commands::DataStructure* dataStructure, decaf::io::DataOutputStream* dataOut) throw (decaf::io::IOException)` [virtual]

Write a object instance to data output stream.

Parameters:

wireFormat - describes the wire format of the broker

dataStructure - Object to be marshaled

dataOut - BinaryWriter that provides that data sink

Exceptions:

IOException if an error occurs during the marshal.

Reimplemented from `activemq::wireformat::openwire::marshal::v2::MessageMarshaller` (p. 2306).

6.40.3.4 `virtual void activemq::wireformat::openwire::marshal::v2::ActiveMQMapMessageMarshaller::looseUnmarshal (OpenWireFormat * wireFormat, commands::DataStructure * dataStructure, decaf::io::DataInputStream * dataIn) throw (decaf::io::IOException)` [virtual]

Un-marshall an object instance from the data input stream.

Parameters:

wireFormat - describes the wire format of the broker

dataStructure - Object to be marshaled

dataIn - BinaryReader that provides that data source

Exceptions:

IOException if an error occurs during the unmarshal.

Reimplemented from `activemq::wireformat::openwire::marshal::v2::MessageMarshaller` (p. 2306).

6.40.3.5 `virtual int activemq::wireformat::openwire::marshal::v2::ActiveMQMapMessageMarshaller::tightMarshal (OpenWireFormat * wireFormat, commands::DataStructure * dataStructure, utils::BooleanStream * bs) throw (decaf::io::IOException)` [virtual]

Write the booleans that this object uses to a BooleanStream.

Parameters:

wireFormat - describes the wire format of the broker

dataStructure - Object to be marshaled

bs - BooleanStream stream used to pack bits from the wire.

Returns:

int value indicating the size of the marshaled object.

Exceptions:

IOException if an error occurs during the marshal.

Reimplemented from `activemq::wireformat::openwire::marshal::v2::MessageMarshaller` (p. 2307).

6.40.3.6 `virtual void activemq::wireformat::openwire::marshal::v2::ActiveMQMapMessageMarshaller::tightMarshal(OpenWireFormat * wireFormat, commands::DataStructure * dataStructure, decaf::io::DataOutputStream * dataOut, utils::BooleanStream * bs) throw (decaf::io::IOException) [virtual]`

Write a object instance to data output stream.

Parameters:

wireFormat - describes the wire format of the broker
dataStructure - Object to be marshaled
dataOut - BinaryReader that provides that data sink
bs - BooleanStream stream used to pack bits from the wire.

Exceptions:

IOException if an error occurs during the marshal.

Reimplemented from `activemq::wireformat::openwire::marshal::v2::MessageMarshaller` (p. 2308).

6.40.3.7 `virtual void activemq::wireformat::openwire::marshal::v2::ActiveMQMapMessageMarshaller::tightUnmarshal(OpenWireFormat * wireFormat, commands::DataStructure * dataStructure, decaf::io::DataInputStream * dataIn, utils::BooleanStream * bs) throw (decaf::io::IOException) [virtual]`

Un-marshall an object instance from the data input stream.

Parameters:

wireFormat - describes the wire format of the broker.
dataStructure - Object to be un-marshaled.
dataIn - BinaryReader that provides that data.
bs - BooleanStream stream used to unpack bits from the wire.

Exceptions:

IOException if an error occurs during the unmarshal.

Reimplemented from `activemq::wireformat::openwire::marshal::v2::MessageMarshaller` (p. 2308).

The documentation for this class was generated from the following file:

- `src/main/activemq/wireformat/openwire/marshal/v2/ActiveMQMapMessageMarshaller.h`

6.41 activemq::commands::ActiveMQMessage Class Reference

#include <src/main/activemq/commands/ActiveMQMessage.h> Inheritance diagram for activemq::commands::ActiveMQMessage:

Public Member Functions

- **ActiveMQMessage** ()
- virtual **~ActiveMQMessage** ()
- virtual unsigned char **getDataStructureType** () const
Get the unique identifier that this object and its own Marshaler share.
- virtual void **copyDataStructure** (const **DataStructure** *src)
Copy the contents of the passed object into this objects members, overwriting any existing data.
- virtual **ActiveMQMessage** * **cloneDataStructure** () const
Clone this object and return a new instance that the caller now owns, this will be an exact copy of this one.
- virtual std::string **toString** () const
*Returns a string containing the information for this **DataStructure** (p. 1461) such as its type and value of its elements.*
- virtual bool **equals** (const **DataStructure** *value) const
*Compares the **DataStructure** (p. 1461) passed in to this one, and returns if they are equivalent.*
- virtual **cms::Message** * **clone** () const
Clone this message exactly, returns a new instance that the caller is required to delete.

Static Public Attributes

- static const unsigned char **ID_ACTIVEMQMESSAGE** = 23

6.41.1 Constructor & Destructor Documentation

6.41.1.1 **activemq::commands::ActiveMQMessage::ActiveMQMessage** ()

6.41.1.2 **virtual activemq::commands::ActiveMQMessage::~~ActiveMQMessage** ()
[inline, virtual]

6.41.2 Member Function Documentation

6.41.2.1 **virtual cms::Message* activemq::commands::ActiveMQMessage::clone** ()
const [inline, virtual]

Clone this message exactly, returns a new instance that the caller is required to delete.

Returns:

new copy of this message

Implements **cms::Message** (p. 2168).

6.41.2.2 `virtual ActiveMQMessage* activemq::commands::ActiveMQMessage::cloneDataStructure () const [virtual]`

Clone this object and return a new instance that the caller now owns, this will be an exact copy of this one.

Returns:

new copy of this object.

Reimplemented from **activemq::commands::Message** (p. 2149).

6.41.2.3 `virtual void activemq::commands::ActiveMQMessage::copyDataStructure (const DataStructure * src) [virtual]`

Copy the contents of the passed object into this objects members, overwriting any existing data.

Returns:

src - Source Object

Reimplemented from **activemq::commands::Message** (p. 2150).

6.41.2.4 `virtual bool activemq::commands::ActiveMQMessage::equals (const DataStructure * value) const [virtual]`

Compares the **DataStructure** (p. 1461) passed in to this one, and returns if they are equivalent. Equivalent here means that they are of the same type, and that each element of the objects are the same.

Returns:

true if DataStructure's are Equal.

Reimplemented from **activemq::commands::ActiveMQMessageTemplate< cms::Message >** (p. 369).

6.41.2.5 `virtual unsigned char activemq::commands::ActiveMQMessage::getDataStructureType () const [virtual]`

Get the unique identifier that this object and its own Marshaler share.

Returns:

new **DataStructure** (p. 1461) type copy.

Reimplemented from **activemq::commands::Message** (p. 2152).

6.41.2.6 `virtual std::string activemq::commands::ActiveMQMessage::toString ()` `const` [virtual]

Returns a string containing the information for this **DataStructure** (p.1461) such as its type and value of its elements.

Returns:

formatted string useful for debugging.

Reimplemented from `activemq::commands::Message` (p.2159).

6.41.3 Field Documentation

6.41.3.1 `const unsigned char activemq::commands::ActiveMQMessage::ID_-` `ACTIVEMQMESSAGE = 23` [static]

The documentation for this class was generated from the following file:

- `src/main/activemq/commands/ActiveMQMessage.h`

6.42 activemq::wireformat::openwire::marshal::v3::ActiveMQMessageMarshaller Class Reference

Marshaling code for Open Wire Format for **ActiveMQMessageMarshaller** (p. 345).

#include <src/main/activemq/wireformat/openwire/marshal/v3/ActiveMQMessageMarshaller.h> Inheritance diagram for activemq::wireformat::openwire::marshal::v3::ActiveMQMessageMarshaller:

Public Member Functions

- **ActiveMQMessageMarshaller** ()
- virtual **~ActiveMQMessageMarshaller** ()
- virtual **commands::DataStructure * createObject** () const
Creates a new instance of this marshalable type.
- virtual unsigned char **getDataStructureType** () const
Get the Data Structure Type that identifies this Marshaler.
- virtual void **tightUnmarshal** (OpenWireFormat *wireFormat, **commands::DataStructure** *dataStructure, **decaf::io::DataInputStream** *dataIn, **utils::BooleanStream** *bs) throw (decaf::io::IOException)
Un-marshal an object instance from the data input stream.
- virtual int **tightMarshal1** (OpenWireFormat *wireFormat, **commands::DataStructure** *dataStructure, **utils::BooleanStream** *bs) throw (decaf::io::IOException)
Write the booleans that this object uses to a BooleanStream.
- virtual void **tightMarshal2** (OpenWireFormat *wireFormat, **commands::DataStructure** *dataStructure, **decaf::io::DataOutputStream** *dataOut, **utils::BooleanStream** *bs) throw (decaf::io::IOException)
Write a object instance to data output stream.
- virtual void **looseUnmarshal** (OpenWireFormat *wireFormat, **commands::DataStructure** *dataStructure, **decaf::io::DataInputStream** *dataIn) throw (decaf::io::IOException)
Un-marshal an object instance from the data input stream.
- virtual void **looseMarshal** (OpenWireFormat *wireFormat, **commands::DataStructure** *dataStructure, **decaf::io::DataOutputStream** *dataOut) throw (decaf::io::IOException)
Write a object instance to data output stream.

6.42.1 Detailed Description

Marshaling code for Open Wire Format for **ActiveMQMessageMarshaller** (p. 345). NOTE!: This file is auto generated - do not modify! if you need to make a change, please see the Java Classes in the activemq-openwire-generator module

6.42.2 Constructor & Destructor Documentation

6.42.2.1 `activemq::wireformat::openwire::marshal::v3::ActiveMQMessageMarshaller::ActiveMQMessageMarshaller()` [inline]

6.42.2.2 `virtual activemq::wireformat::openwire::marshal::v3::ActiveMQMessageMarshaller::~~ActiveMQMessageMarshaller()` [inline, virtual]

6.42.3 Member Function Documentation

6.42.3.1 `virtual commands::DataStructure* activemq::wireformat::openwire::marshal::v3::ActiveMQMessageMarshaller::createObject()` const [virtual]

Creates a new instance of this marshalable type.

Returns:

new DataStructure object pointer caller owns it.

Implements `activemq::wireformat::openwire::marshal::DataStreamMarshaller` (p. 1419).

6.42.3.2 `virtual unsigned char activemq::wireformat::openwire::marshal::v3::ActiveMQMessageMarshaller::getDataStructureType()` const [virtual]

Get the Data Structure Type that identifies this Marshaler.

Returns:

byte holding the data structure type value

Implements `activemq::wireformat::openwire::marshal::DataStreamMarshaller` (p. 1424).

6.42.3.3 `virtual void activemq::wireformat::openwire::marshal::v3::ActiveMQMessageMarshaller::looseMarshal(OpenWireFormat * wireFormat, commands::DataStructure * dataStructure, decaf::io::DataOutputStream * dataOut) throw (decaf::io::IOException)` [virtual]

Write a object instance to data output stream.

Parameters:

wireFormat - describes the wire format of the broker

dataStructure - Object to be marshaled

dataOut - BinaryWriter that provides that data sink

Exceptions:

IOException if an error occurs during the marshal.

Reimplemented from `activemq::wireformat::openwire::marshal::v3::MessageMarshaller` (p. 2316).

6.42.3.4 `virtual void activemq::wireformat::openwire::marshal::v3::ActiveMQMessageMarshaller::looseUnmarshal (OpenWireFormat * wireFormat, commands::DataStructure * dataStructure, decaf::io::DataInputStream * dataIn) throw (decaf::io::IOException)` [virtual]

Un-marshall an object instance from the data input stream.

Parameters:

wireFormat - describes the wire format of the broker

dataStructure - Object to be marshaled

dataIn - BinaryReader that provides that data source

Exceptions:

IOException if an error occurs during the unmarshal.

Reimplemented from `activemq::wireformat::openwire::marshal::v3::MessageMarshaller` (p. 2316).

6.42.3.5 `virtual int activemq::wireformat::openwire::marshal::v3::ActiveMQMessageMarshaller::tightMarshal1 (OpenWireFormat * wireFormat, commands::DataStructure * dataStructure, utils::BooleanStream * bs) throw (decaf::io::IOException)` [virtual]

Write the booleans that this object uses to a BooleanStream.

Parameters:

wireFormat - describes the wire format of the broker

dataStructure - Object to be marshaled

bs - BooleanStream stream used to pack bits from the wire.

Returns:

int value indicating the size of the marshaled object.

Exceptions:

IOException if an error occurs during the marshal.

Reimplemented from `activemq::wireformat::openwire::marshal::v3::MessageMarshaller` (p. 2317).

6.42.3.6 `virtual void activemq::wireformat::openwire::marshal::v3::ActiveMQMessageMarshaller::tightMarshal2 (OpenWireFormat * wireFormat, commands::DataStructure * dataStructure, decaf::io::DataOutputStream * dataOut, utils::BooleanStream * bs) throw (decaf::io::IOException) [virtual]`

Write a object instance to data output stream.

Parameters:

wireFormat - describes the wire format of the broker
dataStructure - Object to be marshaled
dataOut - BinaryReader that provides that data sink
bs - BooleanStream stream used to pack bits from the wire.

Exceptions:

IOException if an error occurs during the marshal.

Reimplemented from `activemq::wireformat::openwire::marshal::v3::MessageMarshaller` (p. 2318).

6.42.3.7 `virtual void activemq::wireformat::openwire::marshal::v3::ActiveMQMessageMarshaller::tightUnmarshal (OpenWireFormat * wireFormat, commands::DataStructure * dataStructure, decaf::io::DataInputStream * dataIn, utils::BooleanStream * bs) throw (decaf::io::IOException) [virtual]`

Un-marshal an object instance from the data input stream.

Parameters:

wireFormat - describes the wire format of the broker.
dataStructure - Object to be un-marshaled.
dataIn - BinaryReader that provides that data.
bs - BooleanStream stream used to unpack bits from the wire.

Exceptions:

IOException if an error occurs during the unmarshal.

Reimplemented from `activemq::wireformat::openwire::marshal::v3::MessageMarshaller` (p. 2318).

The documentation for this class was generated from the following file:

6.43.1 Detailed Description

Marshaling code for Open Wire Format for **ActiveMQMessageMarshaller** (p. 349). NOTE!: This file is auto generated - do not modify! if you need to make a change, please see the Java Classes in the activemq-openwire-generator module

6.43.2 Constructor & Destructor Documentation

6.43.2.1 `activemq::wireformat::openwire::marshal::v1::ActiveMQMessageMarshaller::ActiveMQMessageMarshaller()` [inline]

6.43.2.2 `virtual activemq::wireformat::openwire::marshal::v1::ActiveMQMessageMarshaller::~~ActiveMQMessageMarshaller()` [inline, virtual]

6.43.3 Member Function Documentation

6.43.3.1 `virtual commands::DataStructure* activemq::wireformat::openwire::marshal::v1::ActiveMQMessageMarshaller::createObject() const` [virtual]

Creates a new instance of this marshalable type.

Returns:

new DataStructure object pointer caller owns it.

Implements `activemq::wireformat::openwire::marshal::DataStreamMarshaller` (p. 1419).

6.43.3.2 `virtual unsigned char activemq::wireformat::openwire::marshal::v1::ActiveMQMessageMarshaller::getDataStructureType() const` [virtual]

Get the Data Structure Type that identifies this Marshaler.

Returns:

byte holding the data structure type value

Implements `activemq::wireformat::openwire::marshal::DataStreamMarshaller` (p. 1424).

6.43.3.3 `virtual void activemq::wireformat::openwire::marshal::v1::ActiveMQMessageMarshaller::looseMarshal(OpenWireFormat * wireFormat, commands::DataStructure * dataStructure, decaf::io::DataOutputStream * dataOut) throw (decaf::io::IOException)` [virtual]

Write a object instance to data output stream.

Parameters:

wireFormat - describes the wire format of the broker

dataStructure - Object to be marshaled

dataOut - BinaryWriter that provides that data sink

Exceptions:

IOException if an error occurs during the marshal.

Reimplemented from `activemq::wireformat::openwire::marshal::v1::MessageMarshaller` (p. 2326).

6.43.3.4 `virtual void activemq::wireformat::openwire::marshal::v1::ActiveMQMessageMarshaller::looseUnmarshal (OpenWireFormat * wireFormat, commands::DataStructure * dataStructure, decaf::io::DataInputStream * dataIn) throw (decaf::io::IOException)` [virtual]

Un-marshall an object instance from the data input stream.

Parameters:

wireFormat - describes the wire format of the broker

dataStructure - Object to be marshaled

dataIn - BinaryReader that provides that data source

Exceptions:

IOException if an error occurs during the unmarshal.

Reimplemented from `activemq::wireformat::openwire::marshal::v1::MessageMarshaller` (p. 2326).

6.43.3.5 `virtual int activemq::wireformat::openwire::marshal::v1::ActiveMQMessageMarshaller::tightMarshal1 (OpenWireFormat * wireFormat, commands::DataStructure * dataStructure, utils::BooleanStream * bs) throw (decaf::io::IOException)` [virtual]

Write the booleans that this object uses to a BooleanStream.

Parameters:

wireFormat - describes the wire format of the broker

dataStructure - Object to be marshaled

bs - BooleanStream stream used to pack bits from the wire.

Returns:

int value indicating the size of the marshaled object.

Exceptions:

IOException if an error occurs during the marshal.

Reimplemented from `activemq::wireformat::openwire::marshal::v1::MessageMarshaller` (p. 2327).

6.43.3.6 `virtual void activemq::wireformat::openwire::marshal::v1::ActiveMQMessageMarshaller::tightMarshal2 (OpenWireFormat * wireFormat, commands::DataStructure * dataStructure, decaf::io::DataOutputStream * dataOut, utils::BooleanStream * bs) throw (decaf::io::IOException) [virtual]`

Write a object instance to data output stream.

Parameters:

wireFormat - describes the wire format of the broker
dataStructure - Object to be marshaled
dataOut - BinaryReader that provides that data sink
bs - BooleanStream stream used to pack bits from the wire.

Exceptions:

IOException if an error occurs during the marshal.

Reimplemented from `activemq::wireformat::openwire::marshal::v1::MessageMarshaller` (p. 2328).

6.43.3.7 `virtual void activemq::wireformat::openwire::marshal::v1::ActiveMQMessageMarshaller::tightUnmarshal (OpenWireFormat * wireFormat, commands::DataStructure * dataStructure, decaf::io::DataInputStream * dataIn, utils::BooleanStream * bs) throw (decaf::io::IOException) [virtual]`

Un-marshal an object instance from the data input stream.

Parameters:

wireFormat - describes the wire format of the broker.
dataStructure - Object to be un-marshaled.
dataIn - BinaryReader that provides that data.
bs - BooleanStream stream used to unpack bits from the wire.

Exceptions:

IOException if an error occurs during the unmarshal.

Reimplemented from `activemq::wireformat::openwire::marshal::v1::MessageMarshaller` (p. 2328).

6.44.1 Detailed Description

Marshaling code for Open Wire Format for **ActiveMQMessageMarshaller** (p. 353). NOTE!: This file is auto generated - do not modify! if you need to make a change, please see the Java Classes in the activemq-openwire-generator module

6.44.2 Constructor & Destructor Documentation

6.44.2.1 `activemq::wireformat::openwire::marshal::v4::ActiveMQMessageMarshaller::ActiveMQMessageMarshaller()` [inline]

6.44.2.2 `virtual activemq::wireformat::openwire::marshal::v4::ActiveMQMessageMarshaller::~~ActiveMQMessageMarshaller()` [inline, virtual]

6.44.3 Member Function Documentation

6.44.3.1 `virtual commands::DataStructure* activemq::wireformat::openwire::marshal::v4::ActiveMQMessageMarshaller::createObject() const` [virtual]

Creates a new instance of this marshalable type.

Returns:

new DataStructure object pointer caller owns it.

Implements `activemq::wireformat::openwire::marshal::DataStreamMarshaller` (p. 1419).

6.44.3.2 `virtual unsigned char activemq::wireformat::openwire::marshal::v4::ActiveMQMessageMarshaller::getDataStructureType() const` [virtual]

Get the Data Structure Type that identifies this Marshaler.

Returns:

byte holding the data structure type value

Implements `activemq::wireformat::openwire::marshal::DataStreamMarshaller` (p. 1424).

6.44.3.3 `virtual void activemq::wireformat::openwire::marshal::v4::ActiveMQMessageMarshaller::looseMarshal(OpenWireFormat * wireFormat, commands::DataStructure * dataStructure, decaf::io::DataOutputStream * dataOut) throw (decaf::io::IOException)` [virtual]

Write a object instance to data output stream.

Parameters:

wireFormat - describes the wire format of the broker

dataStructure - Object to be marshaled

dataOut - BinaryWriter that provides that data sink

Exceptions:

IOException if an error occurs during the marshal.

Reimplemented from `activemq::wireformat::openwire::marshal::v4::MessageMarshaller` (p. 2311).

6.44.3.4 `virtual void activemq::wireformat::openwire::marshal::v4::ActiveMQMessageMarshaller::looseUnmarshal (OpenWireFormat * wireFormat, commands::DataStructure * dataStructure, decaf::io::DataInputStream * dataIn) throw (decaf::io::IOException)` [virtual]

Un-marshall an object instance from the data input stream.

Parameters:

wireFormat - describes the wire format of the broker

dataStructure - Object to be marshaled

dataIn - BinaryReader that provides that data source

Exceptions:

IOException if an error occurs during the unmarshal.

Reimplemented from `activemq::wireformat::openwire::marshal::v4::MessageMarshaller` (p. 2311).

6.44.3.5 `virtual int activemq::wireformat::openwire::marshal::v4::ActiveMQMessageMarshaller::tightMarshal1 (OpenWireFormat * wireFormat, commands::DataStructure * dataStructure, utils::BooleanStream * bs) throw (decaf::io::IOException)` [virtual]

Write the booleans that this object uses to a BooleanStream.

Parameters:

wireFormat - describes the wire format of the broker

dataStructure - Object to be marshaled

bs - BooleanStream stream used to pack bits from the wire.

Returns:

int value indicating the size of the marshaled object.

Exceptions:

IOException if an error occurs during the marshal.

Reimplemented from `activemq::wireformat::openwire::marshal::v4::MessageMarshaller` (p. 2312).

6.44.3.6 `virtual void activemq::wireformat::openwire::marshal::v4::ActiveMQMessageMarshaller::tightMarshal2 (OpenWireFormat * wireFormat, commands::DataStructure * dataStructure, decaf::io::DataOutputStream * dataOut, utils::BooleanStream * bs) throw (decaf::io::IOException) [virtual]`

Write a object instance to data output stream.

Parameters:

wireFormat - describes the wire format of the broker
dataStructure - Object to be marshaled
dataOut - BinaryReader that provides that data sink
bs - BooleanStream stream used to pack bits from the wire.

Exceptions:

IOException if an error occurs during the marshal.

Reimplemented from `activemq::wireformat::openwire::marshal::v4::MessageMarshaller` (p. 2313).

6.44.3.7 `virtual void activemq::wireformat::openwire::marshal::v4::ActiveMQMessageMarshaller::tightUnmarshal (OpenWireFormat * wireFormat, commands::DataStructure * dataStructure, decaf::io::DataInputStream * dataIn, utils::BooleanStream * bs) throw (decaf::io::IOException) [virtual]`

Un-marshal an object instance from the data input stream.

Parameters:

wireFormat - describes the wire format of the broker.
dataStructure - Object to be un-marshaled.
dataIn - BinaryReader that provides that data.
bs - BooleanStream stream used to unpack bits from the wire.

Exceptions:

IOException if an error occurs during the unmarshal.

Reimplemented from `activemq::wireformat::openwire::marshal::v4::MessageMarshaller` (p. 2313).

The documentation for this class was generated from the following file:

- `src/main/activemq/wireformat/openwire/marshal/v4/ActiveMQMessageMarshaller.h`

6.45 activemq::wireformat::openwire::marshal::v5::ActiveMQMessageMarshaller Class Reference

Marshaling code for Open Wire Format for **ActiveMQMessageMarshaller** (p. 357).

Write a object instance to data output stream.

6.45.1 Detailed Description

Marshaling code for Open Wire Format for **ActiveMQMessageMarshaller** (p. 357). NOTE!: This file is auto generated - do not modify! if you need to make a change, please see the Java Classes in the activemq-openwire-generator module

6.45.2 Constructor & Destructor Documentation

6.45.2.1 `activemq::wireformat::openwire::marshal::v5::ActiveMQMessageMarshaller::ActiveMQMessageMarshaller()` [inline]

6.45.2.2 `virtual activemq::wireformat::openwire::marshal::v5::ActiveMQMessageMarshaller::~~ActiveMQMessageMarshaller()` [inline, virtual]

6.45.3 Member Function Documentation

6.45.3.1 `virtual commands::DataStructure* activemq::wireformat::openwire::marshal::v5::ActiveMQMessageMarshaller::createObject() const` [virtual]

Creates a new instance of this marshalable type.

Returns:

new DataStructure object pointer caller owns it.

Implements `activemq::wireformat::openwire::marshal::DataStreamMarshaller` (p. 1419).

6.45.3.2 `virtual unsigned char activemq::wireformat::openwire::marshal::v5::ActiveMQMessageMarshaller::getDataStructureType() const` [virtual]

Get the Data Structure Type that identifies this Marshaler.

Returns:

byte holding the data structure type value

Implements `activemq::wireformat::openwire::marshal::DataStreamMarshaller` (p. 1424).

6.45.3.3 `virtual void activemq::wireformat::openwire::marshal::v5::ActiveMQMessageMarshaller::looseMarshal(OpenWireFormat * wireFormat, commands::DataStructure * dataStructure, decaf::io::DataOutputStream * dataOut) throw (decaf::io::IOException)` [virtual]

Write a object instance to data output stream.

Parameters:

wireFormat - describes the wire format of the broker

dataStructure - Object to be marshaled

dataOut - BinaryWriter that provides that data sink

Exceptions:

IOException if an error occurs during the marshal.

Reimplemented from `activemq::wireformat::openwire::marshal::v5::MessageMarshaller` (p. 2321).

6.45.3.4 `virtual void activemq::wireformat::openwire::marshal::v5::ActiveMQMessageMarshaller::looseUnmarshal (OpenWireFormat * wireFormat, commands::DataStructure * dataStructure, decaf::io::DataInputStream * dataIn) throw (decaf::io::IOException)` [virtual]

Un-marshall an object instance from the data input stream.

Parameters:

wireFormat - describes the wire format of the broker

dataStructure - Object to be marshaled

dataIn - BinaryReader that provides that data source

Exceptions:

IOException if an error occurs during the unmarshal.

Reimplemented from `activemq::wireformat::openwire::marshal::v5::MessageMarshaller` (p. 2321).

6.45.3.5 `virtual int activemq::wireformat::openwire::marshal::v5::ActiveMQMessageMarshaller::tightMarshal1 (OpenWireFormat * wireFormat, commands::DataStructure * dataStructure, utils::BooleanStream * bs) throw (decaf::io::IOException)` [virtual]

Write the booleans that this object uses to a BooleanStream.

Parameters:

wireFormat - describes the wire format of the broker

dataStructure - Object to be marshaled

bs - BooleanStream stream used to pack bits from the wire.

Returns:

int value indicating the size of the marshaled object.

Exceptions:

IOException if an error occurs during the marshal.

Reimplemented from `activemq::wireformat::openwire::marshal::v5::MessageMarshaller` (p. 2322).

6.45.3.6 `virtual void activemq::wireformat::openwire::marshal::v5::ActiveMQMessageMarshaller::tightMarshal2 (OpenWireFormat * wireFormat, commands::DataStructure * dataStructure, decaf::io::DataOutputStream * dataOut, utils::BooleanStream * bs) throw (decaf::io::IOException) [virtual]`

Write a object instance to data output stream.

Parameters:

wireFormat - describes the wire format of the broker
dataStructure - Object to be marshaled
dataOut - BinaryReader that provides that data sink
bs - BooleanStream stream used to pack bits from the wire.

Exceptions:

IOException if an error occurs during the marshal.

Reimplemented from `activemq::wireformat::openwire::marshal::v5::MessageMarshaller` (p. 2323).

6.45.3.7 `virtual void activemq::wireformat::openwire::marshal::v5::ActiveMQMessageMarshaller::tightUnmarshal (OpenWireFormat * wireFormat, commands::DataStructure * dataStructure, decaf::io::DataInputStream * dataIn, utils::BooleanStream * bs) throw (decaf::io::IOException) [virtual]`

Un-marshal an object instance from the data input stream.

Parameters:

wireFormat - describes the wire format of the broker.
dataStructure - Object to be un-marshaled.
dataIn - BinaryReader that provides that data.
bs - BooleanStream stream used to unpack bits from the wire.

Exceptions:

IOException if an error occurs during the unmarshal.

Reimplemented from `activemq::wireformat::openwire::marshal::v5::MessageMarshaller` (p. 2323).

6.46.1 Detailed Description

Marshaling code for Open Wire Format for **ActiveMQMessageMarshaller** (p. 361). NOTE!: This file is auto generated - do not modify! if you need to make a change, please see the Java Classes in the activemq-openwire-generator module

6.46.2 Constructor & Destructor Documentation

6.46.2.1 `activemq::wireformat::openwire::marshal::v2::ActiveMQMessageMarshaller::ActiveMQMessageMarshaller()` [inline]

6.46.2.2 `virtual activemq::wireformat::openwire::marshal::v2::ActiveMQMessageMarshaller::~~ActiveMQMessageMarshaller()` [inline, virtual]

6.46.3 Member Function Documentation

6.46.3.1 `virtual commands::DataStructure* activemq::wireformat::openwire::marshal::v2::ActiveMQMessageMarshaller::createObject() const` [virtual]

Creates a new instance of this marshalable type.

Returns:

new DataStructure object pointer caller owns it.

Implements `activemq::wireformat::openwire::marshal::DataStreamMarshaller` (p. 1419).

6.46.3.2 `virtual unsigned char activemq::wireformat::openwire::marshal::v2::ActiveMQMessageMarshaller::getDataStructureType() const` [virtual]

Get the Data Structure Type that identifies this Marshaler.

Returns:

byte holding the data structure type value

Implements `activemq::wireformat::openwire::marshal::DataStreamMarshaller` (p. 1424).

6.46.3.3 `virtual void activemq::wireformat::openwire::marshal::v2::ActiveMQMessageMarshaller::looseMarshal(OpenWireFormat * wireFormat, commands::DataStructure * dataStructure, decaf::io::DataOutputStream * dataOut) throw (decaf::io::IOException)` [virtual]

Write a object instance to data output stream.

Parameters:

wireFormat - describes the wire format of the broker

dataStructure - Object to be marshaled

dataOut - BinaryWriter that provides that data sink

Exceptions:

IOException if an error occurs during the marshal.

Reimplemented from `activemq::wireformat::openwire::marshal::v2::MessageMarshaller` (p. 2306).

6.46.3.4 `virtual void activemq::wireformat::openwire::marshal::v2::ActiveMQMessageMarshaller::looseUnmarshal (OpenWireFormat * wireFormat, commands::DataStructure * dataStructure, decaf::io::DataInputStream * dataIn) throw (decaf::io::IOException)` [virtual]

Un-marshall an object instance from the data input stream.

Parameters:

wireFormat - describes the wire format of the broker

dataStructure - Object to be marshaled

dataIn - BinaryReader that provides that data source

Exceptions:

IOException if an error occurs during the unmarshal.

Reimplemented from `activemq::wireformat::openwire::marshal::v2::MessageMarshaller` (p. 2306).

6.46.3.5 `virtual int activemq::wireformat::openwire::marshal::v2::ActiveMQMessageMarshaller::tightMarshal1 (OpenWireFormat * wireFormat, commands::DataStructure * dataStructure, utils::BooleanStream * bs) throw (decaf::io::IOException)` [virtual]

Write the booleans that this object uses to a BooleanStream.

Parameters:

wireFormat - describes the wire format of the broker

dataStructure - Object to be marshaled

bs - BooleanStream stream used to pack bits from the wire.

Returns:

int value indicating the size of the marshaled object.

Exceptions:

IOException if an error occurs during the marshal.

Reimplemented from `activemq::wireformat::openwire::marshal::v2::MessageMarshaller` (p. 2307).

6.46.3.6 `virtual void activemq::wireformat::openwire::marshal::v2::ActiveMQMessageMarshaller::tightMarshal2 (OpenWireFormat * wireFormat, commands::DataStructure * dataStructure, decaf::io::DataOutputStream * dataOut, utils::BooleanStream * bs) throw (decaf::io::IOException) [virtual]`

Write a object instance to data output stream.

Parameters:

wireFormat - describes the wire format of the broker
dataStructure - Object to be marshaled
dataOut - BinaryReader that provides that data sink
bs - BooleanStream stream used to pack bits from the wire.

Exceptions:

IOException if an error occurs during the marshal.

Reimplemented from `activemq::wireformat::openwire::marshal::v2::MessageMarshaller` (p. 2308).

6.46.3.7 `virtual void activemq::wireformat::openwire::marshal::v2::ActiveMQMessageMarshaller::tightUnmarshal (OpenWireFormat * wireFormat, commands::DataStructure * dataStructure, decaf::io::DataInputStream * dataIn, utils::BooleanStream * bs) throw (decaf::io::IOException) [virtual]`

Un-marshal an object instance from the data input stream.

Parameters:

wireFormat - describes the wire format of the broker.
dataStructure - Object to be un-marshaled.
dataIn - BinaryReader that provides that data.
bs - BooleanStream stream used to unpack bits from the wire.

Exceptions:

IOException if an error occurs during the unmarshal.

Reimplemented from `activemq::wireformat::openwire::marshal::v2::MessageMarshaller` (p. 2308).

- virtual void **clearProperties** () throw (cms::CMSEException)
Clears the message properties.
- virtual std::vector< std::string > **getPropertyNames** () const throw (cms::CMSEException)
Retrieves the property names.
- virtual bool **propertyExists** (const std::string &name) const throw (cms::CMSEException)
Indicates whether or not a given property exists.
- virtual bool **getBooleanProperty** (const std::string &name) const throw (cms::MessageFormatException, cms::CMSEException)
Gets a boolean property.
- virtual unsigned char **getByteProperty** (const std::string &name) const throw (cms::MessageFormatException, cms::CMSEException)
Gets a byte property.
- virtual double **getDoubleProperty** (const std::string &name) const throw (cms::MessageFormatException, cms::CMSEException)
Gets a double property.
- virtual float **getFloatProperty** (const std::string &name) const throw (cms::MessageFormatException, cms::CMSEException)

Gets a float property.

- virtual int **getIntProperty** (const std::string &name) const throw (cms::MessageFormatException, cms::CMSEException)

Gets a int property.

- virtual long long **getLongProperty** (const std::string &name) const throw (cms::MessageFormatException, cms::CMSEException)

Gets a long property.

- virtual short **getShortProperty** (const std::string &name) const throw (cms::MessageFormatException, cms::CMSEException)

Gets a short property.

- virtual std::string **getStringProperty** (const std::string &name) const throw (cms::MessageFormatException, cms::CMSEException)

Gets a string property.

- virtual void **setBooleanProperty** (const std::string &name, bool value) throw (cms::MessageNotWriteableException, cms::CMSEException)

Sets a boolean property.

- virtual void **setByteProperty** (const std::string &name, unsigned char value) throw (cms::MessageNotWriteableException, cms::CMSEException)

Sets a byte property.

- virtual void **setDoubleProperty** (const std::string &name, double value) throw (cms::MessageNotWriteableException, cms::CMSEException)

Sets a double property.

- virtual void **setFloatProperty** (const std::string &name, float value) throw (cms::MessageNotWriteableException, cms::CMSEException)

Sets a float property.

- virtual void **setIntProperty** (const std::string &name, int value) throw (cms::MessageNotWriteableException, cms::CMSEException)

Sets a int property.

- virtual void **setLongProperty** (const std::string &name, long long value) throw (cms::MessageNotWriteableException, cms::CMSEException)

Sets a long property.

- virtual void **setShortProperty** (const std::string &name, short value) throw (cms::MessageNotWriteableException, cms::CMSEException)

Sets a short property.

- virtual void **setStringProperty** (const std::string &name, const std::string &value) throw (cms::MessageNotWriteableException, cms::CMSEException)

Sets a string property.

- virtual std::string **getCMSCorrelationID** () const throw (cms::CMSEException)

Get the Correlation Id for this message.

- virtual void **setCMSCorrelationID** (const std::string &correlationId) throw (cms::CMSException)

Sets the Correlation Id used by this message.

- virtual int **getCMSDeliveryMode** () const throw (cms::CMSException)

Gets the DeliveryMode for this message.

- virtual void **setCMSDeliveryMode** (int mode) throw (cms::CMSException)

Sets the DeliveryMode for this message.

- virtual const cms::Destination * **getCMSDestination** () const throw (cms::CMSException)

*Gets the Destination for this **Message** (p. 2145), returns a.*

- virtual void **setCMSDestination** (const cms::Destination *destination) throw (cms::CMSException)

Sets the Destination for this message.

- virtual long long **getCMSExpiration** () const throw (cms::CMSException)

*Gets the Expiration Time for this **Message** (p. 2145).*

activemq::commands::ActiveMQMessageTemplate< T
>::~~ActiveMQMessageTemplate () [inline, virtual]`

6.47.2 Member Function Documentation

- 6.47.2.1 `template<typename T> virtual void
activemq::commands::ActiveMQMessageTemplate< T
>::acknowledge () const throw (cms::IllegalStateException,
cms::CMSException) [inline, virtual]`

Acknowledges all consumed messages of the session of this consumed message.

- 6.47.2.2 `template<typename T> virtual void
activemq::commands::ActiveMQMessageTemplate< T
>::clearBody () throw (cms::CMSException) [inline, virtual]`

Clears out the body of the message. This does not clear the headers or properties.

Reimplemented in **activemq::commands::ActiveMQBytesMessage** (p. 200), **activemq::commands::ActiveMQMapMessage** (p. 311), **activemq::commands::ActiveMQStreamMessage** (p. 467), and **activemq::commands::ActiveMQTextMessage** (p. 574).

6.47.2.3 `template<typename T> virtual void
activemq::commands::ActiveMQMessageTemplate< T
>::clearProperties () throw (cms::CMSException) [inline, virtual]`

Clears the message properties. Does not clear the body or header values.

6.47.2.4 `template<typename T> virtual bool
activemq::commands::ActiveMQMessageTemplate< T
>::equals (const DataStructure * value) const [inline, virtual]`

Compares the **DataStructure** (p. 1461) passed in to this one, and returns if they are equivalent. Equivalent here means that they are of the same type, and that each element of the objects are the same.

Returns:

true if DataStructure's are Equal.

Reimplemented from **activemq::commands::Message** (p. 2150).

Reimplemented in **activemq::commands::ActiveMQBlobMessage** (p. 174), **activemq::commands::ActiveMQBytesMessage** (p. 201), **activemq::commands::ActiveMQMapMessage** (p. 312), **activemq::commands::ActiveMQMessage** (p. 343), **activemq::commands::ActiveMQObjectMessage** (p. 384), **activemq::commands::ActiveMQStreamMessage** (p. 468), and **activemq::commands::ActiveMQTextMessage** (p. 575).

6.47.2.5 `template<typename T> void
activemq::commands::ActiveMQMessageTemplate< T

6.47.2.8 `template<typename T> virtual bool
activemq::commands::ActiveMQMessageTemplate< T
>::getBooleanProperty (const std::string & name) const throw (
cms::MessageFormatException, cms::CMSException) [inline, virtual]`

Gets a boolean property.

Parameters:

name The name of the property to retrieve.

Returns:

The value for the named property.

Exceptions:

CMSEException if the property does not exist.

MessageFormatException - if this type conversion is invalid.

```
6.47.2.9  template<typename T> virtual unsigned char
          activemq::commands::ActiveMQMessageTemplate< T >::getByteProperty
          (const std::string & name) const throw ( cms::MessageFormatException,
          cms::CMSEException ) [inline, virtual]
```

Gets a byte property.

Parameters:

name The name of the property to retrieve.

Returns:

The value for the named property.

Exceptions:

CMSEException if the property does not exist.

MessageFormatException - if this type conversion is invalid.

```
6.47.2.10 template<typename T> virtual std::string
          activemq::commands::ActiveMQMessageTemplate< T
          >::getCMSCorrelationID () const throw ( cms::CMSEException )
          [inline, virtual]
```

Get the Correlation Id for this message.

Returns:

string representation of the correlation Id

Exceptions:

CMSEException

```
6.47.2.11 template<typename T> virtual int
          activemq::commands::ActiveMQMessageTemplate< T
          >::getCMSDeliveryMode () const throw ( cms::CMSEException )
          [inline, virtual]
```

Gets the DeliveryMode for this message.

Returns:

DeliveryMode enumerated value.

Exceptions:

CMSException

6.47.2.12 `template<typename T> virtual const cms::Destination*
activemq::commands::ActiveMQMessageTemplate< T
>::getCMSDestination () const throw (cms::CMSException) [inline,
virtual]`

Gets the Destination for this **Message** (p. 2145), returns a.

Returns:

Destination object

Exceptions:

CMSException

6.47.2.13 `template<typename T> virtual long long
activemq::commands::ActiveMQMessageTemplate< T
>::getCMSExpiration () const throw (cms::CMSException) [inline,
virtual]`

Gets the Expiration Time for this **Message** (p. 2145).

Returns:

time value

Exceptions:

CMSException

6.47.2.14 `template<typename T> virtual std::string
activemq::commands::ActiveMQMessageTemplate< T
>::getCMSMessageID () const throw (cms::CMSException) [inline,
virtual]`

Gets the CMS **Message** (p. 2145) Id for this **Message** (p. 2145).

Returns:

time value

Exceptions:

CMSException

6.47.2.15 `template<typename T> virtual int
activemq::commands::ActiveMQMessageTemplate< T
>::getCMSPriority () const throw (cms::CMSException) [inline,
virtual]`

Gets the Priority Value for this **Message** (p. 2145).

Returns:

priority value

Exceptions:

CMSException

6.47.2.16 `template<typename T> virtual bool
activemq::commands::ActiveMQMessageTemplate< T
>::getCMSRedelivered () const throw (cms::CMSException) [inline,
virtual]`

Gets the Redelivered Flag for this **Message** (p. 2145).

Returns:

redelivered value

Exceptions:

CMSException

6.47.2.17 `template<typename T> virtual const cms::Destination*
activemq::commands::ActiveMQMessageTemplate< T
>::getCMSReplyTo () const throw (cms::CMSException) [inline,
virtual]`

Gets the CMS Reply To Address for this **Message** (p. 2145).

Returns:

Reply To Value

Exceptions:

CMSException

6.47.2.18 `template<typename T> virtual long long
activemq::commands::ActiveMQMessageTemplate< T
>::getCMSTimestamp () const throw (cms::CMSException) [inline,
virtual]`

Gets the Time Stamp for this **Message** (p. 2145).

Returns:

time stamp value

Exceptions:

CMSEException

6.47.2.19 `template<typename T> virtual std::string
activemq::commands::ActiveMQMessageTemplate< T
>::getCMSType () const throw (cms::CMSEException) [inline,
virtual]`

Gets the CMS Message (p. 2145) Type for this Message (p. 2145).

Returns:

type value

Exceptions:

CMSEException

6.47.2.20 `template<typename T> virtual double
activemq::commands::ActiveMQMessageTemplate< T
>::getDoubleProperty (const std::string & name) const throw (
cms::MessageFormatException, cms::CMSEException) [inline, virtual]`

Gets a double property.

Parameters:

name The name of the property to retrieve.

Returns:

The value for the named property.

Exceptions:

CMSEException if the property does not exist.

MessageFormatException - if this type conversion is invalid.

6.47.2.21 `template<typename T> virtual float
activemq::commands::ActiveMQMessageTemplate< T
>::getFloatProperty (const std::string & name) const throw (
cms::MessageFormatException, cms::CMSEException) [inline, virtual]`

Gets a float property.

Parameters:

name The name of the property to retrieve.

Returns:

The value for the named property.

Exceptions:

CMSEException if the property does not exist.

MessageFormatException - if this type conversion is invalid.

```
6.47.2.22  template<typename T> virtual int
            activemq::commands::ActiveMQMessageTemplate< T
            >::getIntProperty (const std::string & name) const throw (
            cms::MessageFormatException, cms::CMSEException ) [inline, virtual]
```

Gets a int property.

Parameters:

name The name of the property to retrieve.

Returns:

The value for the named property.

Exceptions:

CMSEException if the property does not exist.

MessageFormatException - if this type conversion is invalid.

```
6.47.2.23  template<typename T> virtual long long
            activemq::commands::ActiveMQMessageTemplate< T
            >::getLongProperty (const std::string & name) const throw (
            cms::MessageFormatException, cms::CMSEException ) [inline, virtual]
```

Gets a long property.

Parameters:

name The name of the property to retrieve.

Returns:

The value for the named property.

Exceptions:

CMSEException if the property does not exist.

MessageFormatException - if this type conversion is invalid.

```
6.47.2.24  template<typename T> virtual std::vector<std::string>
           activemq::commands::ActiveMQMessageTemplate< T
           >::getPropertyNames () const throw ( cms::CMSEException ) [inline,
           virtual]
```

Retrieves the property names.

Returns:

The complete set of property names currently in this message.

```
6.47.2.25  template<typename T> virtual short
           activemq::commands::ActiveMQMessageTemplate< T
           >::getShortProperty (const std::string & name) const throw (
           cms::MessageFormatException, cms::CMSEException ) [inline, virtual]
```

Gets a short property.

Parameters:

name The name of the property to retrieve.

Returns:

The value for the named property.

Exceptions:

CMSEException if the property does not exist.

MessageFormatException - if this type conversion is invalid.

```
6.47.2.26  template<typename T> virtual std::string
           activemq::commands::ActiveMQMessageTemplate< T
           >::getStringProperty (const std::string & name) const throw (
           cms::MessageFormatException, cms::CMSEException ) [inline, virtual]
```

Gets a string property.

Parameters:

name The name of the property to retrieve.

Returns:

The value for the named property.

Exceptions:

CMSEException if the property does not exist.

MessageFormatException - if this type conversion is invalid.

6.47.2.27 `template<typename T> virtual void
activemq::commands::ActiveMQMessageTemplate< T
>::onSend () [inline, virtual]`

Resets the **Message** (p. 2145) to a Read-Only state.

Reimplemented from **activemq::commands::Message** (p. 2156).

Reimplemented in **activemq::commands::ActiveMQBytesMessage** (p. 202), and **activemq::commands::ActiveMQStreamMessage** (p. 468).

6.47.2.28 `template<typename T> virtual bool
activemq::commands::ActiveMQMessageTemplate< T
>::propertyExists (const std::string & name) const throw (cms::CMSException) [inline, virtual]`

Indicates whether or not a given property exists.

Parameters:

name The name of the property to look up.

Returns:

True if the property exists in this message.

6.47.2.29 `template<typename T> virtual void
activemq::commands::ActiveMQMessageTemplate< T
>::setBooleanProperty (const std::string & name, bool value) throw (cms::MessageNotWriteableException, cms::CMSException) [inline, virtual]`

Sets a boolean property.

Parameters:

name The name of the property to retrieve.

value The value for the named property.

Exceptions:

CMSException - if the name is an empty string.

MessageNotWriteableException - if properties are read-only

6.47.2.30 `template<typename T> virtual void
activemq::commands::ActiveMQMessageTemplate< T
>::setByteProperty (const std::string & name, unsigned char value)
throw (cms::MessageNotWriteableException, cms::CMSException)
[inline, virtual]`

Sets a byte property.

Parameters:

name The name of the property to retrieve.

value The value for the named property.

Exceptions:

CMSException - if the name is an empty string.

MessageNotWriteableException - if properties are read-only

6.47.2.31 `template<typename T> virtual void
activemq::commands::ActiveMQMessageTemplate< T
>::setCMSCorrelationID (const std::string & correlationId) throw (
cms::CMSException) [inline, virtual]`

Sets the Correlation Id used by this message.

Parameters:

correlationId - String representing the correlation id.

Exceptions:

CMSException

6.47.2.32 `template<typename T> virtual void
activemq::commands::ActiveMQMessageTemplate< T
>::setCMSDeliveryMode (int mode) throw (cms::CMSException)
[inline, virtual]`

Sets the DeliveryMode for this message.

Parameters:

mode - DeliveryMode enumerated value.

Exceptions:

CMSException

6.47.2.33 `template<typename T> virtual void
activemq::commands::ActiveMQMessageTemplate< T
>::setCMSDestination (const cms::Destination * destination) throw (
cms::CMSException) [inline, virtual]`

Sets the Destination for this message.

Parameters:

destination - Destination Object

Exceptions:

CMSException

6.47.2.34 `template<typename T> virtual void
activemq::commands::ActiveMQMessageTemplate< T
>::setCMSExpiration (long long expireTime) throw (
cms::CMSException) [inline, virtual]`

Sets the Expiration Time for this message.

Parameters:

expireTime - time value

Exceptions:

CMSException

6.47.2.35 `template<typename T> virtual void
activemq::commands::ActiveMQMessageTemplate< T
>::setCMSMessageID (const std::string &id AMQCPP_UNUSED)
throw (cms::CMSException) [inline, virtual]`

Sets the CMS Message (p. 2145) Id for this message.

Parameters:

id - time value

Exceptions:

CMSException

6.47.2.36 `template<typename T> virtual void
activemq::commands::ActiveMQMessageTemplate< T
>::setCMSPriority (int priority) throw (cms::CMSException) [inline,
virtual]`

Sets the Priority Value for this message.

Parameters:

priority - priority value for this message

Exceptions:

CMSException

6.47.2.37 `template<typename T> virtual void
activemq::commands::ActiveMQMessageTemplate< T
>::setCMSRedelivered (bool redelivered AMQCPP_UNUSED) throw (
cms::CMSException) [inline, virtual]`

Sets the Redelivered Flag for this message.

Parameters:

redelivered - boolean redelivered value

Exceptions:

CMSException

```
6.47.2.38  template<typename T> virtual void
            activemq::commands::ActiveMQMessageTemplate< T
            >::setCMSReplyTo (const cms::Destination * destination) throw (
            cms::CMSException ) [inline, virtual]
```

Sets the CMS Reply To Address for this message.

Parameters:

destination Pointer to the CMS Destination that is the Reply-To value.

Exceptions:

CMSException

```
6.47.2.39  template<typename T> virtual void
            activemq::commands::ActiveMQMessageTemplate< T
            >::setCMSTimestamp (long long timeStamp) throw (
            cms::CMSException ) [inline, virtual]
```

Sets the Time Stamp for this message.

Parameters:

timeStamp - integer time stamp value

Exceptions:

CMSException

```
6.47.2.40  template<typename T> virtual void
            activemq::commands::ActiveMQMessageTemplate< T
            >::setCMSType (const std::string & type) throw ( cms::CMSException )
            [inline, virtual]
```

Sets the CMS **Message** (p. 2145) Type for this message.

Parameters:

type - message type value string

Exceptions:

CMSException

6.47.2.41 `template<typename T> virtual void
activemq::commands::ActiveMQMessageTemplate< T
>::setDoubleProperty (const std::string & name, double value) throw (
cms::MessageNotWriteableException, cms::CMSEException) [inline,
virtual]`

Sets a double property.

Parameters:

name The name of the property to retrieve.

value The value for the named property.

Exceptions:

CMSEException - if the name is an empty string.

MessageNotWriteableException - if properties are read-only

6.47.2.42 `template<typename T> virtual void
activemq::commands::ActiveMQMessageTemplate< T
>::setFloatProperty (const std::string & name, float value) throw (
cms::MessageNotWriteableException, cms::CMSEException) [inline,
virtual]`

Sets a float property.

Parameters:

name The name of the property to retrieve.

value The value for the named property.

Exceptions:

CMSEException - if the name is an empty string.

MessageNotWriteableException - if properties are read-only

6.47.2.43 `template<typename T> virtual void
activemq::commands::ActiveMQMessageTemplate< T
>::setIntProperty (const std::string & name, int value) throw (
cms::MessageNotWriteableException, cms::CMSEException) [inline,
virtual]`

Sets a int property.

Parameters:

name The name of the property to retrieve.

value The value for the named property.

Exceptions:

CMSEException - if the name is an empty string.

MessageNotWriteableException - if properties are read-only

6.47.2.44 `template<typename T> virtual void
activemq::commands::ActiveMQMessageTemplate< T
>::setLongProperty (const std::string & name, long long value) throw (
cms::MessageNotWriteableException, cms::CMSException) [inline,
virtual]`

Sets a long property.

Parameters:

name The name of the property to retrieve.

value The value for the named property.

Exceptions:

CMSException - if the name is an empty string.

MessageNotWriteableException - if properties are read-only

6.47.2.45 `template<typename T> virtual void
activemq::commands::ActiveMQMessageTemplate< T
>::setShortProperty (const std::string & name, short value) throw (
cms::MessageNotWriteableException, cms::CMSException) [inline,
virtual]`

Sets a short property.

Parameters:

name The name of the property to retrieve.

value The value for the named property.

Exceptions:

CMSException - if the name is an empty string.

MessageNotWriteableException - if properties are read-only

6.47.2.46 `template<typename T> virtual void
activemq::commands::ActiveMQMessageTemplate< T
>::setStringProperty (const std::string & name, const std::string &
value) throw (cms::MessageNotWriteableException, cms::CMSException
) [inline, virtual]`

Sets a string property.

Parameters:

name The name of the property to retrieve.

value The value for the named property.

Exceptions:

CMSException - if the name is an empty string.

MessageNotWriteableException - if properties are read-only

The documentation for this class was generated from the following file:

- `src/main/activemq/commands/ActiveMQMessageTemplate.h`

6.48 activemq::commands::ActiveMQObjectMessage Class Reference

#include <src/main/activemq/commands/ActiveMQObjectMessage.h> Inheritance diagram for activemq::commands::ActiveMQObjectMessage:

Public Member Functions

- **ActiveMQObjectMessage** ()
- virtual **~ActiveMQObjectMessage** ()
- virtual unsigned char **getDataStructureType** () const

Get the unique identifier that this object and its own Marshaler share.

- virtual **ActiveMQObjectMessage * cloneDataStructure** () const

Clone this object and return a new instance that the caller now owns, this will be an exact copy of this one.

- virtual void **copyDataStructure** (const **DataStructure** *src)

Copy the contents of the passed object into this objects members, overwriting any existing data.

- virtual std::string **toString** () const

*Returns a string containing the information for this **DataStructure** (p. 1461) such as its type and value of its elements.*

- virtual bool **equals** (const **DataStructure** *value) const

*Compares the **DataStructure** (p. 1461) passed in to this one, and returns if they are equivalent.*

- virtual **cms::Message * clone** () const

Clone this message exactly, returns a new instance that the caller is required to delete.

Static Public Attributes

- static const unsigned char **ID_ACTIVEMQOBJECTMESSAGE** = 26

6.48.1 Constructor & Destructor Documentation

6.48.1.1 `activemq::commands::ActiveMQObjectMessage::ActiveMQObjectMessage()`

6.48.1.2 `virtual activemq::commands::ActiveMQObjectMessage::~~ActiveMQObjectMessage()` [inline, virtual]

6.48.2 Member Function Documentation

6.48.2.1 `virtual cms::Message* activemq::commands::ActiveMQObjectMessage::clone()` const [inline, virtual]

Clone this message exactly, returns a new instance that the caller is required to delete.

Returns:

new copy of this message

Implements `cms::Message` (p. 2168).

6.48.2.2 `virtual ActiveMQObjectMessage* activemq::commands::ActiveMQObjectMessage::cloneDataStructure()` const [virtual]

Clone this object and return a new instance that the caller now owns, this will be an exact copy of this one.

Returns:

new copy of this object.

Reimplemented from `activemq::commands::Message` (p. 2149).

6.48.2.3 `virtual void activemq::commands::ActiveMQObjectMessage::copyDataStructure(const DataStructure * src)` [virtual]

Copy the contents of the passed object into this objects members, overwriting any existing data.

Returns:

src - Source Object

Reimplemented from `activemq::commands::Message` (p. 2150).

6.48.2.4 `virtual bool activemq::commands::ActiveMQObjectMessage::equals(const DataStructure * value)` const [virtual]

Compares the `DataStructure` (p. 1461) passed in to this one, and returns if they are equivalent. Equivalent here means that they are of the same type, and that each element of the objects are the same.

Returns:

true if DataStructure's are Equal.

Reimplemented from `activemq::commands::ActiveMQMessageTemplate<cms::ObjectMessage>` (p. 369).

6.48.2.5 `virtual unsigned char activemq::commands::ActiveMQObjectMessage::getDataStructureType () const [virtual]`

Get the unique identifier that this object and its own Marshaler share.

Returns:

new **DataStructure** (p. 1461) type copy.

Reimplemented from `activemq::commands::Message` (p. 2152).

6.48.2.6 `virtual std::string activemq::commands::ActiveMQObjectMessage::toString () const [virtual]`

Returns a string containing the information for this **DataStructure** (p. 1461) such as its type and value of its elements.

Returns:

formatted string useful for debugging.

Reimplemented from `activemq::commands::Message` (p. 2159).

6.48.3 Field Documentation

6.48.3.1 `const unsigned char activemq::commands::ActiveMQObjectMessage::ID_-ACTIVEMQOBJECTMESSAGE = 26 [static]`

The documentation for this class was generated from the following file:

- `src/main/activemq/commands/ActiveMQObjectMessage.h`

6.49 activemq::wireformat::openwire::marshal::v3::ActiveMQObjectMessageMarshaller Class Reference

Marshaling code for Open Wire Format for **ActiveMQObjectMessageMarshaller** (p. 386).

#include <src/main/activemq/wireformat/openwire/marshal/v3/ActiveMQObjectMessageMarshaller.h> Inheritance diagram for activemq::wireformat::openwire::marshal::v3::ActiveMQObjectMessageMarshaller:

Public Member Functions

- **ActiveMQObjectMessageMarshaller** ()
- virtual **~ActiveMQObjectMessageMarshaller** ()
- virtual **commands::DataStructure * createObject** () const
Creates a new instance of this marshalable type.
- virtual unsigned char **getDataStructureType** () const
Get the Data Structure Type that identifies this Marshaler.
- virtual void **tightUnmarshal** (**OpenWireFormat *wireFormat**, **commands::DataStructure *dataStructure**, **decaf::io::DataInputStream *dataIn**, **utils::BooleanStream *bs**) throw (**decaf::io::IOException**)
Un-marshal an object instance from the data input stream.
- virtual int **tightMarshal** (**OpenWireFormat *wireFormat**, **commands::DataStructure *dataStructure**, **utils::BooleanStream *bs**) throw (**decaf::io::IOException**)
Write the booleans that this object uses to a BooleanStream.
- virtual void **tightMarshal2** (**OpenWireFormat *wireFormat**, **commands::DataStructure *dataStructure**, **decaf::io::DataOutputStream *dataOut**, **utils::BooleanStream *bs**) throw (**decaf::io::IOException**)
Write a object instance to data output stream.
- virtual void **looseUnmarshal** (**OpenWireFormat *wireFormat**, **commands::DataStructure *dataStructure**, **decaf::io::DataInputStream *dataIn**) throw (**decaf::io::IOException**)
Un-marshal an object instance from the data input stream.
- virtual void **looseMarshal** (**OpenWireFormat *wireFormat**, **commands::DataStructure *dataStructure**, **decaf::io::DataOutputStream *dataOut**) throw (**decaf::io::IOException**)
Write a object instance to data output stream.

6.49.1 Detailed Description

Marshaling code for Open Wire Format for **ActiveMQObjectMessageMarshaller** (p. 386).

NOTE!: This file is auto generated - do not modify! if you need to make a change, please see the Java Classes in the activemq-openwire-generator module

6.49.2 Constructor & Destructor Documentation

6.49.2.1 `activemq::wireformat::openwire::marshal::v3::ActiveMQObjectMessageMarshaller::ActiveMQObjectMessageMarshaller()` [inline]

6.49.2.2 `virtual activemq::wireformat::openwire::marshal::v3::ActiveMQObjectMessageMarshaller::~~ActiveMQObjectMessageMarshaller()` [inline, virtual]

6.49.3 Member Function Documentation

6.49.3.1 `virtual commands::DataStructure* activemq::wireformat::openwire::marshal::v3::ActiveMQObjectMessageMarshaller::createObject(const commands::DataStructure& dataStructure) const` [virtual]

Creates a new instance of this marshalable type.

Returns:

new DataStructure object pointer caller owns it.

Implements `activemq::wireformat::openwire::marshal::DataStreamMarshaller` (p. 1419).

6.49.3.2 `virtual unsigned char activemq::wireformat::openwire::marshal::v3::ActiveMQObjectMessageMarshaller::getDataStructureType() const` [virtual]

Get the Data Structure Type that identifies this Marshaler.

Returns:

byte holding the data structure type value

Implements `activemq::wireformat::openwire::marshal::DataStreamMarshaller` (p. 1424).

6.49.3.3 `virtual void activemq::wireformat::openwire::marshal::v3::ActiveMQObjectMessageMarshaller::marshal(const commands::DataStructure& dataStructure, decaf::io::DataOutputStream& dataOut) throw (decaf::io::IOException)` [virtual]

Write a object instance to data output stream.

Parameters:

wireFormat - describes the wire format of the broker

dataStructure - Object to be marshaled

dataOut - BinaryWriter that provides that data sink

Exceptions:

IOException if an error occurs during the marshal.

Reimplemented from `activemq::wireformat::openwire::marshal::v3::MessageMarshaller` (p. 2316).

6.49.3.4 `virtual void activemq::wireformat::openwire::marshal::v3::ActiveMQObjectMessageMarshaller::looseUnmarshal(OpenWireFormat * wireFormat, commands::DataStructure * dataStructure, decaf::io::DataInputStream * dataIn) throw (decaf::io::IOException)` [virtual]

Un-marshall an object instance from the data input stream.

Parameters:

wireFormat - describes the wire format of the broker

dataStructure - Object to be marshaled

dataIn - BinaryReader that provides that data source

Exceptions:

IOException if an error occurs during the unmarshal.

Reimplemented from `activemq::wireformat::openwire::marshal::v3::MessageMarshaller` (p. 2316).

6.49.3.5 `virtual int activemq::wireformat::openwire::marshal::v3::ActiveMQObjectMessageMarshaller::tightMarshal(OpenWireFormat * wireFormat, commands::DataStructure * dataStructure, utils::BooleanStream * bs) throw (decaf::io::IOException)` [virtual]

Write the booleans that this object uses to a BooleanStream.

Parameters:

wireFormat - describes the wire format of the broker

dataStructure - Object to be marshaled

bs - BooleanStream stream used to pack bits from the wire.

Returns:

int value indicating the size of the marshaled object.

Exceptions:

IOException if an error occurs during the marshal.

Reimplemented from `activemq::wireformat::openwire::marshal::v3::MessageMarshaller` (p. 2317).

6.49

activemq::wireformat::openwire::marshal::v3::ActiveMQObjectMessageMarshaller

Class Reference

391

```
6.49.3.6 virtual void ac-
tivemq::wireformat::openwire::marshal::v3::ActiveMQObjectMessageMarshaller::tightMarshal
(OpenWireFormat * wireFormat, commands::DataStructure
* dataStructure, decaf::io::DataOutputStream * dataOut,
utils::BooleanStream * bs) throw ( decaf::io::IOException ) [virtual]
```

Write a object instance to data output stream.

Parameters:

wireFormat - describes the wire format of the broker
dataStructure - Object to be marshaled
dataOut - BinaryReader that provides that data sink
bs - BooleanStream stream used to pack bits from the wire.

Exceptions:

IOException if an error occurs during the marshal.

Reimplemented from `activemq::wireformat::openwire::marshal::v3::MessageMarshaller`
(p. 2318).

```
6.49.3.7 virtual void ac-
tivemq::wireformat::openwire::marshal::v3::ActiveMQObjectMessageMarshaller::tightUnma
(OpenWireFormat * wireFormat, commands::DataStructure *
dataStructure, decaf::io::DataInputStream * dataIn, utils::BooleanStream
* bs) throw ( decaf::io::IOException ) [virtual]
```

Un-marshall an object instance from the data input stream.

Parameters:

wireFormat - describes the wire format of the broker.
dataStructure - Object to be un-marshaled.
dataIn - BinaryReader that provides that data.
bs - BooleanStream stream used to unpack bits from the wire.

Exceptions:

IOException if an error occurs during the unmarshal.

Reimplemented from `activemq::wireformat::openwire::marshal::v3::MessageMarshaller`
(p. 2318).

The documentation for this class was generated from the following file:

6.50.1 Detailed Description

Marshaling code for Open Wire Format for **ActiveMQObjectMessageMarshaller** (p. 390).

NOTE!: This file is auto generated - do not modify! if you need to make a change, please see the Java Classes in the activemq-openwire-generator module

6.50.2 Constructor & Destructor Documentation

6.50.2.1 `activemq::wireformat::openwire::marshal::v1::ActiveMQObjectMessageMarshaller::ActiveMQObjectMessageMarshaller()` `[inline]`

6.50.2.2 `virtual activemq::wireformat::openwire::marshal::v1::ActiveMQObjectMessageMarshaller::~~ActiveMQObjectMessageMarshaller()` `[inline, virtual]`

6.50.3 Member Function Documentation

6.50.3.1 `virtual commands::DataStructure* activemq::wireformat::openwire::marshal::v1::ActiveMQObjectMessageMarshaller::createObject(const commands::DataStructure& dataStructure) const` `[virtual]`

Creates a new instance of this marshalable type.

Returns:

new DataStructure object pointer caller owns it.

Implements `activemq::wireformat::openwire::marshal::DataStreamMarshaller` (p. 1419).

6.50.3.2 `virtual unsigned char activemq::wireformat::openwire::marshal::v1::ActiveMQObjectMessageMarshaller::getDataStructureType() const` `[virtual]`

Get the Data Structure Type that identifies this Marshaler.

Returns:

byte holding the data structure type value

Implements `activemq::wireformat::openwire::marshal::DataStreamMarshaller` (p. 1424).

6.50.3.3 `virtual void activemq::wireformat::openwire::marshal::v1::ActiveMQObjectMessageMarshaller::marshal(const commands::DataStructure& dataStructure, decaf::io::DataOutputStream* dataOut) throw (decaf::io::IOException)` `[virtual]`

Write a object instance to data output stream.

Parameters:

wireFormat - describes the wire format of the broker

dataStructure - Object to be marshaled

dataOut - BinaryWriter that provides that data sink

Exceptions:

IOException if an error occurs during the marshal.

Reimplemented from `activemq::wireformat::openwire::marshal::v1::MessageMarshaller` (p. 2326).

6.50.3.4 `virtual void activemq::wireformat::openwire::marshal::v1::ActiveMQObjectMessageMarshaller::looseUnmarshal(OpenWireFormat * wireFormat, commands::DataStructure * dataStructure, decaf::io::DataInputStream * dataIn) throw (decaf::io::IOException)` [virtual]

Un-marshall an object instance from the data input stream.

Parameters:

wireFormat - describes the wire format of the broker

dataStructure - Object to be marshaled

dataIn - BinaryReader that provides that data source

Exceptions:

IOException if an error occurs during the unmarshal.

Reimplemented from `activemq::wireformat::openwire::marshal::v1::MessageMarshaller` (p. 2326).

6.50.3.5 `virtual int activemq::wireformat::openwire::marshal::v1::ActiveMQObjectMessageMarshaller::tightMarshal(OpenWireFormat * wireFormat, commands::DataStructure * dataStructure, utils::BooleanStream * bs) throw (decaf::io::IOException)` [virtual]

Write the booleans that this object uses to a BooleanStream.

Parameters:

wireFormat - describes the wire format of the broker

dataStructure - Object to be marshaled

bs - BooleanStream stream used to pack bits from the wire.

Returns:

int value indicating the size of the marshaled object.

Exceptions:

IOException if an error occurs during the marshal.

Reimplemented from `activemq::wireformat::openwire::marshal::v1::MessageMarshaller` (p. 2327).

```

6.50.3.6 virtual void ac-
        tivemq::wireformat::openwire::marshal::v1::ActiveMQObjectMessageMarshaller::tightMarshal
        (OpenWireFormat * wireFormat, commands::DataStructure
        * dataStructure, decaf::io::DataOutputStream * dataOut,
        utils::BooleanStream * bs) throw ( decaf::io::IOException ) [virtual]

```

Write a object instance to data output stream.

Parameters:

- wireFormat* - describes the wire format of the broker
- dataStructure* - Object to be marshaled
- dataOut* - BinaryReader that provides that data sink
- bs* - BooleanStream stream used to pack bits from the wire.

Exceptions:

- IOException* if an error occurs during the marshal.

Reimplemented from `activemq::wireformat::openwire::marshal::v1::MessageMarshaller` (p. 2328).

```

6.50.3.7 virtual void ac-
        tivemq::wireformat::openwire::marshal::v1::ActiveMQObjectMessageMarshaller::tightUnma
        (OpenWireFormat * wireFormat, commands::DataStructure *
        dataStructure, decaf::io::DataInputStream * dataIn, utils::BooleanStream
        * bs) throw ( decaf::io::IOException ) [virtual]

```

Un-marshall an object instance from the data input stream.

Parameters:

- wireFormat* - describes the wire format of the broker.
- dataStructure* - Object to be un-marshaled.
- dataIn* - BinaryReader that provides that data.
- bs* - BooleanStream stream used to unpack bits from the wire.

Exceptions:

- IOException* if an error occurs during the unmarshal.

Reimplemented from `activemq::wireformat::openwire::marshal::v1::MessageMarshaller` (p. 2328).

The documentation for this class was generated from the following file:

- `src/main/activemq/wireformat/openwire/marshal/v1/ActiveMQObjectMessageMarshaller.h`

6.51 activemq::wireformat::openwire::marshal::v4::ActiveMQObjectMessageMarshaller Class Reference

Marshaling code for Open Wire Format for **ActiveMQObjectMessageMarshaller** (p. 394).

#include <src/main/activemq/wireformat/openwire/marshal/v4/ActiveMQObjectMessageMarshaller.h> Inheritance diagram for activemq::wireformat::openwire::marshal::v4::ActiveMQObjectMessageMarshaller:

Public Member Functions

- **ActiveMQObjectMessageMarshaller** ()
- virtual **~ActiveMQObjectMessageMarshaller** ()
- virtual **commands::DataStructure * createObject** () const
Creates a new instance of this marshalable type.
- virtual unsigned char **getDataStructureType** () const
Get the Data Structure Type that identifies this Marshaler.
- virtual void **tightUnmarshal** (**OpenWireFormat *wireFormat**, **commands::DataStructure *dataStructure**, **decaf::io::DataInputStream *dataIn**, **utils::BooleanStream *bs**) throw (**decaf::io::IOException**)
Un-marshal an object instance from the data input stream.
- virtual int **tightMarshal** (**OpenWireFormat *wireFormat**, **commands::DataStructure *dataStructure**, **utils::BooleanStream *bs**) throw (**decaf::io::IOException**)
Write the booleans that this object uses to a BooleanStream.
- virtual void **tightMarshal2** (**OpenWireFormat *wireFormat**, **commands::DataStructure *dataStructure**, **decaf::io::DataOutputStream *dataOut**, **utils::BooleanStream *bs**) throw (**decaf::io::IOException**)
Write a object instance to data output stream.
- virtual void **looseUnmarshal** (**OpenWireFormat *wireFormat**, **commands::DataStructure *dataStructure**, **decaf::io::DataInputStream *dataIn**) throw (**decaf::io::IOException**)
Un-marshal an object instance from the data input stream.
- virtual void **looseMarshal** (**OpenWireFormat *wireFormat**, **commands::DataStructure *dataStructure**, **decaf::io::DataOutputStream *dataOut**) throw (**decaf::io::IOException**)
Write a object instance to data output stream.

6.51.1 Detailed Description

Marshaling code for Open Wire Format for **ActiveMQObjectMessageMarshaller** (p. 394).

NOTE!: This file is auto generated - do not modify! if you need to make a change, please see the Java Classes in the activemq-openwire-generator module

6.51.2 Constructor & Destructor Documentation

6.51.2.1 `activemq::wireformat::openwire::marshal::v4::ActiveMQObjectMessageMarshaller::ActiveMQObjectMessageMarshaller()` [inline]

6.51.2.2 `virtual activemq::wireformat::openwire::marshal::v4::ActiveMQObjectMessageMarshaller::~~ActiveMQObjectMessageMarshaller()` [inline, virtual]

6.51.3 Member Function Documentation

6.51.3.1 `virtual commands::DataStructure* activemq::wireformat::openwire::marshal::v4::ActiveMQObjectMessageMarshaller::createObject(const commands::DataStructure&) const` [virtual]

Creates a new instance of this marshalable type.

Returns:

new DataStructure object pointer caller owns it.

Implements `activemq::wireformat::openwire::marshal::DataStreamMarshaller` (p. 1419).

6.51.3.2 `virtual unsigned char activemq::wireformat::openwire::marshal::v4::ActiveMQObjectMessageMarshaller::getDataStructureType() const` [virtual]

Get the Data Structure Type that identifies this Marshaler.

Returns:

byte holding the data structure type value

Implements `activemq::wireformat::openwire::marshal::DataStreamMarshaller` (p. 1424).

6.51.3.3 `virtual void activemq::wireformat::openwire::marshal::v4::ActiveMQObjectMessageMarshaller::marshal(const commands::DataStructure&, OpenWireFormat* wireFormat, commands::DataStructure* dataStructure, decaf::io::DataOutputStream* dataOut) throw (decaf::io::IOException)` [virtual]

Write a object instance to data output stream.

Parameters:

wireFormat - describes the wire format of the broker

dataStructure - Object to be marshaled

dataOut - BinaryWriter that provides that data sink

Exceptions:

IOException if an error occurs during the marshal.

Reimplemented from `activemq::wireformat::openwire::marshal::v4::MessageMarshaller` (p. 2311).

6.51.3.4 `virtual void activemq::wireformat::openwire::marshal::v4::ActiveMQObjectMessageMarshaller::looseUnmarshal(OpenWireFormat * wireFormat, commands::DataStructure * dataStructure, decaf::io::DataInputStream * dataIn) throw (decaf::io::IOException)` [virtual]

Un-marshall an object instance from the data input stream.

Parameters:

wireFormat - describes the wire format of the broker

dataStructure - Object to be marshaled

dataIn - BinaryReader that provides that data source

Exceptions:

IOException if an error occurs during the unmarshal.

Reimplemented from `activemq::wireformat::openwire::marshal::v4::MessageMarshaller` (p. 2311).

6.51.3.5 `virtual int activemq::wireformat::openwire::marshal::v4::ActiveMQObjectMessageMarshaller::tightMarshal(OpenWireFormat * wireFormat, commands::DataStructure * dataStructure, utils::BooleanStream * bs) throw (decaf::io::IOException)` [virtual]

Write the booleans that this object uses to a BooleanStream.

Parameters:

wireFormat - describes the wire format of the broker

dataStructure - Object to be marshaled

bs - BooleanStream stream used to pack bits from the wire.

Returns:

int value indicating the size of the marshaled object.

Exceptions:

IOException if an error occurs during the marshal.

Reimplemented from `activemq::wireformat::openwire::marshal::v4::MessageMarshaller` (p. 2312).

```

6.51.3.6 virtual void ac-
        tivemq::wireformat::openwire::marshal::v4::ActiveMQObjectMessageMarshaller::tightMarshal
        (OpenWireFormat * wireFormat, commands::DataStructure
        * dataStructure, decaf::io::DataOutputStream * dataOut,
        utils::BooleanStream * bs) throw ( decaf::io::IOException ) [virtual]

```

Write a object instance to data output stream.

Parameters:

wireFormat - describes the wire format of the broker
dataStructure - Object to be marshaled
dataOut - BinaryReader that provides that data sink
bs - BooleanStream stream used to pack bits from the wire.

Exceptions:

IOException if an error occurs during the marshal.

Reimplemented from `activemq::wireformat::openwire::marshal::v4::MessageMarshaller` (p. 2313).

```

6.51.3.7 virtual void ac-
        tivemq::wireformat::openwire::marshal::v4::ActiveMQObjectMessageMarshaller::tightUnma
        (OpenWireFormat * wireFormat, commands::DataStructure *
        dataStructure, decaf::io::DataInputStream * dataIn, utils::BooleanStream
        * bs) throw ( decaf::io::IOException ) [virtual]

```

Un-marshall an object instance from the data input stream.

Parameters:

wireFormat - describes the wire format of the broker.
dataStructure - Object to be un-marshaled.
dataIn - BinaryReader that provides that data.
bs - BooleanStream stream used to unpack bits from the wire.

Exceptions:

IOException if an error occurs during the unmarshal.

Reimplemented from `activemq::wireformat::openwire::marshal::v4::MessageMarshaller` (p. 2313).

The documentation for this class was generated from the following file:

Write a object instance to data output stream.

6.52.1 Detailed Description

Marshaling code for Open Wire Format for **ActiveMQObjectMessageMarshaller** (p. 398).

NOTE!: This file is auto generated - do not modify! if you need to make a change, please see the Java Classes in the activemq-openwire-generator module

6.52.2 Constructor & Destructor Documentation

6.52.2.1 `activemq::wireformat::openwire::marshal::v5::ActiveMQObjectMessageMarshaller::ActiveMQObjectMessageMarshaller()` [inline]

6.52.2.2 `virtual activemq::wireformat::openwire::marshal::v5::ActiveMQObjectMessageMarshaller::~~ActiveMQObjectMessageMarshaller()` [inline, virtual]

6.52.3 Member Function Documentation

6.52.3.1 `virtual commands::DataStructure* activemq::wireformat::openwire::marshal::v5::ActiveMQObjectMessageMarshaller::createObject(const std::string& name) const` [virtual]

Creates a new instance of this marshalable type.

Returns:

new DataStructure object pointer caller owns it.

Implements `activemq::wireformat::openwire::marshal::DataStreamMarshaller` (p. 1419).

6.52.3.2 `virtual unsigned char activemq::wireformat::openwire::marshal::v5::ActiveMQObjectMessageMarshaller::getDataStructureType() const` [virtual]

Get the Data Structure Type that identifies this Marshaler.

Returns:

byte holding the data structure type value

Implements `activemq::wireformat::openwire::marshal::DataStreamMarshaller` (p. 1424).

6.52.3.3 `virtual void activemq::wireformat::openwire::marshal::v5::ActiveMQObjectMessageMarshaller::marshal(const OpenWireFormat * wireFormat, commands::DataStructure * dataStructure, decaf::io::DataOutputStream * dataOut) throw (decaf::io::IOException)` [virtual]

Write a object instance to data output stream.

Parameters:

wireFormat - describes the wire format of the broker

dataStructure - Object to be marshaled

dataOut - BinaryWriter that provides that data sink

Exceptions:

IOException if an error occurs during the marshal.

Reimplemented from `activemq::wireformat::openwire::marshal::v5::MessageMarshaller` (p. 2321).

6.52.3.4 `virtual void activemq::wireformat::openwire::marshal::v5::ActiveMQObjectMessageMarshaller::looseUnmarshal(OpenWireFormat * wireFormat, commands::DataStructure * dataStructure, decaf::io::DataInputStream * dataIn) throw (decaf::io::IOException)` [virtual]

Un-marshall an object instance from the data input stream.

Parameters:

wireFormat - describes the wire format of the broker

dataStructure - Object to be marshaled

dataIn - BinaryReader that provides that data source

Exceptions:

IOException if an error occurs during the unmarshal.

Reimplemented from `activemq::wireformat::openwire::marshal::v5::MessageMarshaller` (p. 2321).

6.52.3.5 `virtual int activemq::wireformat::openwire::marshal::v5::ActiveMQObjectMessageMarshaller::tightMarshal(OpenWireFormat * wireFormat, commands::DataStructure * dataStructure, utils::BooleanStream * bs) throw (decaf::io::IOException)` [virtual]

Write the booleans that this object uses to a BooleanStream.

Parameters:

wireFormat - describes the wire format of the broker

dataStructure - Object to be marshaled

bs - BooleanStream stream used to pack bits from the wire.

Returns:

int value indicating the size of the marshaled object.

Exceptions:

IOException if an error occurs during the marshal.

Reimplemented from `activemq::wireformat::openwire::marshal::v5::MessageMarshaller` (p. 2322).

```

6.52.3.6 virtual void ac-
        tivemq::wireformat::openwire::marshal::v5::ActiveMQObjectMessageMarshaller::tightMarshal
        (OpenWireFormat * wireFormat, commands::DataStructure
        * dataStructure, decaf::io::DataOutputStream * dataOut,
        utils::BooleanStream * bs) throw ( decaf::io::IOException ) [virtual]

```

Write a object instance to data output stream.

Parameters:

- wireFormat* - describes the wire format of the broker
- dataStructure* - Object to be marshaled
- dataOut* - BinaryReader that provides that data sink
- bs* - BooleanStream stream used to pack bits from the wire.

Exceptions:

- IOException* if an error occurs during the marshal.

Reimplemented from `activemq::wireformat::openwire::marshal::v5::MessageMarshaller` (p. 2323).

```

6.52.3.7 virtual void ac-
        tivemq::wireformat::openwire::marshal::v5::ActiveMQObjectMessageMarshaller::tightUnma
        (OpenWireFormat * wireFormat, commands::DataStructure *
        dataStructure, decaf::io::DataInputStream * dataIn, utils::BooleanStream
        * bs) throw ( decaf::io::IOException ) [virtual]

```

Un-marshall an object instance from the data input stream.

Parameters:

- wireFormat* - describes the wire format of the broker.
- dataStructure* - Object to be un-marshaled.
- dataIn* - BinaryReader that provides that data.
- bs* - BooleanStream stream used to unpack bits from the wire.

Exceptions:

- IOException* if an error occurs during the unmarshal.

Reimplemented from `activemq::wireformat::openwire::marshal::v5::MessageMarshaller` (p. 2323).

The documentation for this class was generated from the following file:

- `src/main/activemq/wireformat/openwire/marshal/v5/ActiveMQObjectMessageMarshaller.h`

6.53 activemq::wireformat::openwire::marshal::v2::ActiveMQObjectMessageMarshaller Class Reference

Marshaling code for Open Wire Format for **ActiveMQObjectMessageMarshaller** (p. 402).

#include <src/main/activemq/wireformat/openwire/marshal/v2/ActiveMQObjectMessageMarshaller.h> Inheritance diagram for activemq::wireformat::openwire::marshal::v2::ActiveMQObjectMessageMarshaller:

Public Member Functions

- **ActiveMQObjectMessageMarshaller** ()
- virtual **~ActiveMQObjectMessageMarshaller** ()

Creates a new instance of this marshalable type.
- virtual unsigned char **getDataStructureType** () const
Get the Data Structure Type that identifies this Marshaler.
- virtual void **tightUnmarshal** (**OpenWireFormat** *wireFormat, **commands::DataStructure** *dataStructure, **decaf::io::DataInputStream** *dataIn, **utils::BooleanStream** *bs) throw (**decaf::io::IOException**)
Un-marshal an object instance from the data input stream.
- virtual int **tightMarshal1** (**OpenWireFormat** *wireFormat, **commands::DataStructure** *dataStructure, **utils::BooleanStream** *bs) throw (**decaf::io::IOException**)
Write the booleans that this object uses to a BooleanStream.
- virtual void **tightMarshal2** (**OpenWireFormat** *wireFormat, **commands::DataStructure** *dataStructure, **decaf::io::DataOutputStream** *dataOut, **utils::BooleanStream** *bs) throw (**decaf::io::IOException**)
Write a object instance to data output stream.
- virtual void **looseUnmarshal** (**OpenWireFormat** *wireFormat, **commands::DataStructure** *dataStructure, **decaf::io::DataInputStream** *dataIn) throw (**decaf::io::IOException**)
Un-marshal an object instance from the data input stream.
- virtual void **looseMarshal** (**OpenWireFormat** *wireFormat, **commands::DataStructure** *dataStructure, **decaf::io::DataOutputStream** *dataOut) throw (**decaf::io::IOException**)
Write a object instance to data output stream.

6.53.1 Detailed Description

Marshaling code for Open Wire Format for **ActiveMQObjectMessageMarshaller** (p. 402).

NOTE!: This file is auto generated - do not modify! if you need to make a change, please see the Java Classes in the activemq-openwire-generator module

6.53.2 Constructor & Destructor Documentation

6.53.2.1 `activemq::wireformat::openwire::marshal::v2::ActiveMQObjectMessageMarshaller::ActiveMQObjectMessageMarshaller()` [inline]

6.53.2.2 `virtual activemq::wireformat::openwire::marshal::v2::ActiveMQObjectMessageMarshaller::~~ActiveMQObjectMessageMarshaller()` [inline, virtual]

6.53.3 Member Function Documentation

6.53.3.1 `virtual commands::DataStructure* activemq::wireformat::openwire::marshal::v2::ActiveMQObjectMessageMarshaller::createObject(const commands::DataStructure&) const` [virtual]

Creates a new instance of this marshalable type.

Returns:

new DataStructure object pointer caller owns it.

Implements `activemq::wireformat::openwire::marshal::DataStreamMarshaller` (p. 1419).

6.53.3.2 `virtual unsigned char activemq::wireformat::openwire::marshal::v2::ActiveMQObjectMessageMarshaller::getDataStructureType() const` [virtual]

Get the Data Structure Type that identifies this Marshaler.

Returns:

byte holding the data structure type value

Implements `activemq::wireformat::openwire::marshal::DataStreamMarshaller` (p. 1424).

6.53.3.3 `virtual void activemq::wireformat::openwire::marshal::v2::ActiveMQObjectMessageMarshaller::marshal(const commands::DataStructure&, const OpenWireFormat* wireFormat, commands::DataStructure* dataStructure, decaf::io::DataOutputStream* dataOut) throw (decaf::io::IOException)` [virtual]

Write a object instance to data output stream.

Parameters:

wireFormat - describes the wire format of the broker

dataStructure - Object to be marshaled

dataOut - BinaryWriter that provides that data sink

Exceptions:

IOException if an error occurs during the marshal.

Reimplemented from `activemq::wireformat::openwire::marshal::v2::MessageMarshaller` (p. 2306).

6.53.3.4 `virtual void activemq::wireformat::openwire::marshal::v2::ActiveMQObjectMessageMarshaller::looseUnmarshal(OpenWireFormat * wireFormat, commands::DataStructure * dataStructure, decaf::io::DataInputStream * dataIn) throw (decaf::io::IOException)` [virtual]

Un-marshall an object instance from the data input stream.

Parameters:

wireFormat - describes the wire format of the broker

dataStructure - Object to be marshaled

dataIn - BinaryReader that provides that data source

Exceptions:

IOException if an error occurs during the unmarshal.

Reimplemented from `activemq::wireformat::openwire::marshal::v2::MessageMarshaller` (p. 2306).

6.53.3.5 `virtual int activemq::wireformat::openwire::marshal::v2::ActiveMQObjectMessageMarshaller::tightMarshal(OpenWireFormat * wireFormat, commands::DataStructure * dataStructure, utils::BooleanStream * bs) throw (decaf::io::IOException)` [virtual]

Write the booleans that this object uses to a BooleanStream.

Parameters:

wireFormat - describes the wire format of the broker

dataStructure - Object to be marshaled

bs - BooleanStream stream used to pack bits from the wire.

Returns:

int value indicating the size of the marshaled object.

Exceptions:

IOException if an error occurs during the marshal.

Reimplemented from `activemq::wireformat::openwire::marshal::v2::MessageMarshaller` (p. 2307).

```

6.53.3.6 virtual void ac-
        tivemq::wireformat::openwire::marshal::v2::ActiveMQObjectMessageMarshaller::tightMarshal
        (OpenWireFormat * wireFormat, commands::DataStructure
        * dataStructure, decaf::io::DataOutputStream * dataOut,
        utils::BooleanStream * bs) throw ( decaf::io::IOException ) [virtual]

```

Write a object instance to data output stream.

Parameters:

- wireFormat* - describes the wire format of the broker
- dataStructure* - Object to be marshaled
- dataOut* - BinaryReader that provides that data sink
- bs* - BooleanStream stream used to pack bits from the wire.

Exceptions:

- IOException* if an error occurs during the marshal.

Reimplemented from `activemq::wireformat::openwire::marshal::v2::MessageMarshaller` (p. 2308).

```

6.53.3.7 virtual void ac-
        tivemq::wireformat::openwire::marshal::v2::ActiveMQObjectMessageMarshaller::tightUnma
        (OpenWireFormat * wireFormat, commands::DataStructure *
        dataStructure, decaf::io::DataInputStream * dataIn, utils::BooleanStream
        * bs) throw ( decaf::io::IOException ) [virtual]

```

Un-marshall an object instance from the data input stream.

Parameters:

- wireFormat* - describes the wire format of the broker.
- dataStructure* - Object to be un-marshaled.
- dataIn* - BinaryReader that provides that data.
- bs* - BooleanStream stream used to unpack bits from the wire.

Exceptions:

- IOException* if an error occurs during the unmarshal.

Reimplemented from `activemq::wireformat::openwire::marshal::v2::MessageMarshaller` (p. 2308).

The documentation for this class was generated from the following file:

6.54 activemq::core::ActiveMQProducer Class Reference

#include <src/main/activemq/core/ActiveMQProducer.h> Inheritance diagram for activemq::core::ActiveMQProducer:

Public Member Functions

- **ActiveMQProducer** (const **Pointer**< **commands::ProducerInfo** > &producerInfo, const **Pointer**< **cms::Destination** > &destination, **ActiveMQSession** *session)
*Constructor, creates an instance of an **ActiveMQProducer** (p. 406).*
- virtual ~**ActiveMQProducer** ()
- virtual void **close** () throw (cms::CMSException)
Closes the Consumer.
- virtual void **send** (cms::Message *message) throw (cms::CMSException, cms::MessageFormatException, cms::InvalidDestinationException, cms::UnsupportedOperationException)
Sends the message to the default producer destination, but does not take ownership of the message, caller must still destroy it.
- virtual void **send** (cms::Message *message, int deliveryMode, int priority, long long timeToLive) throw (cms::CMSException, cms::MessageFormatException, cms::InvalidDestinationException, cms::UnsupportedOperationException)
Sends the message to the default producer destination, but does not take ownership of the message, caller must still destroy it.
- virtual void **send** (const cms::Destination *destination, cms::Message *message) throw (cms::CMSException, cms::MessageFormatException, cms::InvalidDestinationException, cms::UnsupportedOperationException)
Sends the message to the designated destination, but does not take ownership of the message, caller must still destroy it.
- virtual void **send** (const cms::Destination *destination, cms::Message *message, int deliveryMode, int priority, long long timeToLive) throw (cms::CMSException, cms::MessageFormatException, cms::InvalidDestinationException, cms::UnsupportedOperationException)
Sends the message to the designated destination, but does not take ownership of the message, caller must still destroy it.
- virtual void **setDeliveryMode** (int mode) throw (cms::CMSException)
Sets the delivery mode for this Producer.
- virtual int **getDeliveryMode** () const throw (cms::CMSException)
Gets the delivery mode for this Producer.
- virtual void **setDisableMessageID** (bool value) throw (cms::CMSException)
Sets if Message Ids are disabled for this Producer.

- virtual bool **getDisableMessageID** () const throw (cms::CMSEException)
Gets if Message Ids are disabled for this Producer.
- virtual void **setDisableMessageTimeStamp** (bool value) throw (cms::CMSEException)
Sets if Message Time Stamps are disabled for this Producer.
- virtual bool **getDisableMessageTimeStamp** () const throw (cms::CMSEException)
Gets if Message Time Stamps are disabled for this Producer.
- virtual void **setPriority** (int priority) throw (cms::CMSEException)
Sets the Priority that this Producers sends messages at.
- virtual int **getPriority** () const throw (cms::CMSEException)
Gets the Priority level that this producer sends messages at.
- virtual void **setTimeToLive** (long long time) throw (cms::CMSEException)
Sets the Time to Live that this Producers sends messages with.
- virtual long long **getTimeToLive** () const throw (cms::CMSEException)
Gets the Time to Live that this producer sends messages with.
- virtual void **setSendTimeout** (long long time) throw (cms::CMSEException)
Sets the Send Timeout that this Producers sends messages with.
- virtual long long **getSendTimeout** () const throw (cms::CMSEException)
Gets the Send Timeout that this producer sends messages with.
- bool **isClosed** () const
- const **commands::ProducerInfo** & **getProducerInfo** () const
Retries this object ProducerInfo pointer.
- **commands::ProducerId** & **getProducerId** () const
Retries this object ProducerId or NULL if closed.
- virtual void **onProducerAck** (const **commands::ProducerAck** &ack)
Handles the work of Processing a ProducerAck Command from the Broker.

6.54.1 Constructor & Destructor Documentation

- 6.54.1.1** **activemq::core::ActiveMQProducer::ActiveMQProducer** (const **Pointer**< **commands::ProducerInfo** > & *producerInfo*, const **Pointer**< **cms::Destination** > & *destination*, **ActiveMQSession** * *session*)

Constructor, creates an instance of an **ActiveMQProducer** (p. 406).

Parameters:

- producerInfo*** Pointer to a ProducerInfo command which identifies this producer.
- destination*** The assigned Destination this Producer sends to, or null if not set. The Producer does not own the Pointer passed.
- session*** The Session which is the parent of this Producer.

6.54.1.2 `virtual activemq::core::ActiveMQProducer::~~ActiveMQProducer ()`
[virtual]

6.54.2 Member Function Documentation

6.54.2.1 `virtual void activemq::core::ActiveMQProducer::close () throw (`
`cms::CMSEException)` [virtual]

Closes the Consumer. This will return all allocated resources and purge any outstanding messages. This method will block if there is a call to receive in progress, or a dispatch to a MessageListener in place

Exceptions:

CMSEException

Implements **cms::Closeable** (p.1021).

6.54.2.2 `virtual int activemq::core::ActiveMQProducer::getDeliveryMode () const`
`throw (cms::CMSEException)` [inline, virtual]

Gets the delivery mode for this Producer.

Returns:

The DeliveryMode

Implements **cms::MessageProducer** (p.2333).

6.54.2.3 `virtual bool activemq::core::ActiveMQProducer::getDisableMessageID ()`
`const throw (cms::CMSEException)` [inline, virtual]

Gets if Message Ids are disabled for this Producer.

Returns:

a boolean indicating state enable / disable (true / false) for MessageIds.

Implements **cms::MessageProducer** (p.2334).

6.54.2.4 `virtual bool ac-`
`tivemq::core::ActiveMQProducer::getDisableMessageTimeStamp () const`
`throw (cms::CMSEException)` [inline, virtual]

Gets if Message Time Stamps are disabled for this Producer.

Returns:

boolean indicating state of enable / disable (true / false)

Implements **cms::MessageProducer** (p.2334).

6.54.2.5 `virtual int activemq::core::ActiveMQProducer::getPriority () const throw (cms::CMSException) [inline, virtual]`

Gets the Priority level that this producer sends messages at.

Returns:

int based priority level

Implements `cms::MessageProducer` (p. 2334).

6.54.2.6 `commands::ProducerId& activemq::core::ActiveMQProducer::getProducerId () const [inline]`

Retries this object ProducerId or NULL if closed.

Returns:

ProducerId Reference

6.54.2.7 `const commands::ProducerInfo& activemq::core::ActiveMQProducer::getProducerInfo () const [inline]`

Retries this object ProducerInfo pointer.

Returns:

ProducerInfo Reference

6.54.2.8 `virtual long long activemq::core::ActiveMQProducer::getSendTimeout () const throw (cms::CMSException) [inline, virtual]`

Gets the Send Timeout that this producer sends messages with.

Returns:

The default send timeout value in milliseconds.

6.54.2.9 `virtual long long activemq::core::ActiveMQProducer::getTimeToLive () const throw (cms::CMSException) [inline, virtual]`

Gets the Time to Live that this producer sends messages with.

Returns:

The default time to live value in milliseconds.

Implements `cms::MessageProducer` (p. 2335).

6.54.2.10 `bool activemq::core::ActiveMQProducer::isClosed () const [inline]`

Returns:

true if this Producer has been closed.

6.54.2.11 `virtual void activemq::core::ActiveMQProducer::onProducerAck (const commands::ProducerAck & ack) [virtual]`

Handles the work of Processing a ProducerAck Command from the Broker.

Parameters:

ack - The ProducerAck message received from the Broker.

6.54.2.12 `virtual void activemq::core::ActiveMQProducer::send (const cms::Destination * destination, cms::Message * message, int deliveryMode, int priority, long long timeToLive) throw (cms::CMSException, cms::MessageFormatException, cms::InvalidDestinationException, cms::UnsupportedOperationException) [virtual]`

Sends the message to the designated destination, but does not take ownership of the message, caller must still destroy it.

Parameters:

destination The destination on which to send the message

message The message to be sent.

deliveryMode The delivery mode to be used.

priority The priority for this message.

timeToLive The time to live value for this message in milliseconds.

Exceptions:

CMSException - if an internal error occurs while sending the message.

MessageFormatException - if an Invalid Message is given.

InvalidDestinationException - if a client uses this method with a MessageProducer with an invalid destination.

UnsupportedOperationException - if a client uses this method with a MessageProducer that did not specify a destination at creation time.

Implements `cms::MessageProducer` (p.2335).

6.54.2.13 `virtual void activemq::core::ActiveMQProducer::send (const cms::Destination * destination, cms::Message * message) throw (cms::CMSException, cms::MessageFormatException, cms::InvalidDestinationException, cms::UnsupportedOperationException) [virtual]`

Sends the message to the designated destination, but does not take ownership of the message, caller must still destroy it. Uses default values for deliveryMode, priority, and time to live.

Parameters:

destination The destination on which to send the message

message the message to be sent.

Exceptions:

CMSException - if an internal error occurs while sending the message.

MessageFormatException - if an Invalid Message is given.

InvalidDestinationException - if a client uses this method with a MessageProducer with an invalid destination.

UnsupportedOperationException - if a client uses this method with a MessageProducer that did not specify a destination at creation time.

Implements **cms::MessageProducer** (p. 2335).

```
6.54.2.14 virtual void activemq::core::ActiveMQProducer::send (cms::Message
* message, int deliveryMode, int priority, long long timeToLive)
throw ( cms::CMSException, cms::MessageFormatException,
cms::InvalidDestinationException, cms::UnsupportedOperationException
) [virtual]
```

Sends the message to the default producer destination, but does not take ownership of the message, caller must still destroy it.

Parameters:

message The message to be sent.

deliveryMode The delivery mode to be used.

priority The priority for this message.

timeToLive The time to live value for this message in milliseconds.

Exceptions:

CMSException - if an internal error occurs while sending the message.

MessageFormatException - if an Invalid Message is given.

InvalidDestinationException - if a client uses this method with a MessageProducer with an invalid destination.

UnsupportedOperationException - if a client uses this method with a MessageProducer that did not specify a destination at creation time.

Implements **cms::MessageProducer** (p. 2336).

```
6.54.2.15 virtual void activemq::core::ActiveMQProducer::send (cms::Message *
message) throw ( cms::CMSException, cms::MessageFormatException,
cms::InvalidDestinationException, cms::UnsupportedOperationException
) [virtual]
```

Sends the message to the default producer destination, but does not take ownership of the message, caller must still destroy it. Uses default values for deliveryMode, priority, and time to live.

Parameters:

message - The message to be sent.

Exceptions:

CMSEException - if an internal error occurs while sending the message.

MessageFormatException - if an Invalid Message is given.

InvalidDestinationException - if a client uses this method with a MessageProducer with an invalid destination.

UnsupportedOperationException - if a client uses this method with a MessageProducer that did not specify a destination at creation time.

Implements **cms::MessageProducer** (p. 2336).

6.54.2.16 `virtual void activemq::core::ActiveMQProducer::setDeliveryMode (int mode) throw (cms::CMSEException) [inline, virtual]`

Sets the delivery mode for this Producer.

Parameters:

mode - The DeliveryMode to use for Message sends.

Implements **cms::MessageProducer** (p. 2337).

6.54.2.17 `virtual void activemq::core::ActiveMQProducer::setDisableMessageID (bool value) throw (cms::CMSEException) [inline, virtual]`

Sets if Message Ids are disabled for this Producer.

Parameters:

value - boolean indicating enable / disable (true / false)

Implements **cms::MessageProducer** (p. 2337).

6.54.2.18 `virtual void activemq::core::ActiveMQProducer::setDisableMessageTimeStamp (bool value) throw (cms::CMSEException) [inline, virtual]`

Sets if Message Time Stamps are disabled for this Producer.

Parameters:

value - boolean indicating enable / disable (true / false)

Implements **cms::MessageProducer** (p. 2337).

6.54.2.19 `virtual void activemq::core::ActiveMQProducer::setPriority (int priority) throw (cms::CMSEException) [inline, virtual]`

Sets the Priority that this Producers sends messages at.

Parameters:

priority int value for Priority level

Implements **cms::MessageProducer** (p. 2338).

6.54.2.20 virtual void activemq::core::ActiveMQProducer::setSendTimeout (long long *time*) throw (cms::CMSEException) [inline, virtual]

Sets the Send Timeout that this Producers sends messages with.

Parameters:

time The new default send timeout value in milliseconds.

6.54.2.21 virtual void activemq::core::ActiveMQProducer::setTimeToLive (long long *time*) throw (cms::CMSEException) [inline, virtual]

Sets the Time to Live that this Producers sends messages with.

Parameters:

time The new default time to live value in milliseconds.

Implements **cms::MessageProducer** (p. 2338).

The documentation for this class was generated from the following file:

- src/main/activemq/core/**ActiveMQProducer.h**

6.55 activemq::util::ActiveMQProperties Class Reference

Implementation of the CMSProperties interface that delegates to a **decaf::util::Properties** (p.2657) object.

#include <src/main/activemq/util/ActiveMQProperties.h> Inheritance diagram for activemq::util::ActiveMQProperties:

Public Member Functions

- virtual **~ActiveMQProperties** ()
- virtual **decaf::util::Properties** & **getProperties** ()
- virtual const **decaf::util::Properties** & **getProperties** () const
- virtual void **setProperties** (decaf::util::Properties &props)
- virtual bool **isEmpty** () const
Returns true if the properties object is empty.
- virtual const char * **getProperty** (const std::string &name) const
Looks up the value for the given property.
- virtual std::string **getProperty** (const std::string &name, const std::string &defaultValue) const
Looks up the value for the given property.
- virtual void **setProperty** (const std::string &name, const std::string &value)
Sets the value for a given property.
- virtual bool **hasProperty** (const std::string &name) const
Check to see if the Property exists in the set.
- virtual void **remove** (const std::string &name)
Removes the property with the given name.
- virtual std::vector< std::pair< std::string, std::string > > **toArray** () const
Method that serializes the contents of the property map to an arrayay.
- virtual void **copy** (const CMSProperties *source)
Copies the contents of the given properties object to this one.
- virtual CMSProperties * **clone** () const
Clones this object.
- virtual void **clear** ()
Clears all properties from the map.
- virtual std::string **toString** () const
Formats the contents of the Properties Object into a string that can be logged, etc.

6.55.1 Detailed Description

Implementation of the CMSProperties interface that delegates to a **decaf::util::Properties** (p. 2657) object.

Since:

2.0

6.55.2 Constructor & Destructor Documentation

6.55.2.1 `virtual activemq::util::ActiveMQProperties::~~ActiveMQProperties ()` [virtual]

6.55.3 Member Function Documentation

6.55.3.1 `virtual void activemq::util::ActiveMQProperties::clear ()` [inline, virtual]

Clears all properties from the map.

Implements **cms::CMSProperties** (p. 1037).

6.55.3.2 `virtual CMSProperties* activemq::util::ActiveMQProperties::clone ()`
`const` [virtual]

Clones this object.

Returns:

a replica of this object.

Implements **cms::CMSProperties** (p. 1037).

6.55.3.3 `virtual void activemq::util::ActiveMQProperties::copy (const`
`CMSProperties * source)` [virtual]

Copies the contents of the given properties object to this one.

Parameters:

source The source properties object.

6.55.3.4 `virtual const decaf::util::Properties& activemq::util::ActiveMQProperties::getProperties () const` [inline, virtual]

6.55.3.5 `virtual decaf::util::Properties& activemq::util::ActiveMQProperties::getProperties ()` [inline, virtual]

6.55.3.6 `virtual std::string activemq::util::ActiveMQProperties::getProperty (const std::string & name, const std::string & defaultValue) const` [inline, virtual]

Looks up the value for the given property.

Parameters:

name the name of the property to be looked up.

defaultValue The value to be returned if the given property does not exist.

Returns:

The value of the property specified by *name*, if it exists, otherwise the *defaultValue*.

Implements `cms::CMSProperties` (p. 1037).

6.55.3.7 `virtual const char* activemq::util::ActiveMQProperties::getProperty (const std::string & name) const` [inline, virtual]

Looks up the value for the given property.

Parameters:

name The name of the property to be looked up.

Returns:

the value of the property with the given name, if it exists. If it does not exist, returns NULL.

Implements `cms::CMSProperties` (p. 1038).

6.55.3.8 `virtual bool activemq::util::ActiveMQProperties::hasProperty (const std::string & name) const` [inline, virtual]

Check to see if the Property exists in the set.

Parameters:

name - property name to check for in this properties set.

Returns:

true if property exists, false otherwise.

Implements `cms::CMSProperties` (p. 1038).

6.55.3.9 virtual bool activemq::util::ActiveMQProperties::isEmpty () const
[inline, virtual]

Returns true if the properties object is empty.

Returns:

true if empty

Implements **cms::CMSProperties** (p. 1038).

6.55.3.10 virtual void activemq::util::ActiveMQProperties::remove (const std::string & name) [inline, virtual]

Removes the property with the given name.

Parameters:

name the name of the property to remove.

Implements **cms::CMSProperties** (p. 1038).

6.55.3.11 virtual void activemq::util::ActiveMQProperties::setProperties (decaf::util::Properties & props) [inline, virtual]**6.55.3.12 virtual void activemq::util::ActiveMQProperties::setProperty (const std::string & name, const std::string & value)** [inline, virtual]

Sets the value for a given property. If the property already exists, overwrites the value.

Parameters:

name The name of the value to be written.

value The value to be written.

Implements **cms::CMSProperties** (p. 1039).

6.55.3.13 virtual std::vector< std::pair< std::string, std::string > > activemq::util::ActiveMQProperties::toArray () const [inline, virtual]

Method that serializes the contents of the property map to an array.

Returns:

list of pairs where the first is the name and the second is the value.

Implements **cms::CMSProperties** (p. 1039).

6.55.3.14 virtual std::string activemq::util::ActiveMQProperties::toString () const
[inline, virtual]

Formats the contents of the Properties Object into a string that can be logged, etc.

Returns:

string value of this object.

Implements **cms::CMSProperties** (p. 1039).

The documentation for this class was generated from the following file:

- `src/main/activemq/util/ActiveMQProperties.h`

6.56 activemq::commands::ActiveMQQueue Class Reference

#include <src/main/activemq/commands/ActiveMQQueue.h> Inheritance diagram for activemq::commands::ActiveMQQueue:

Public Member Functions

- **ActiveMQQueue** ()
- **ActiveMQQueue** (const std::string &name)
- virtual ~**ActiveMQQueue** ()
- virtual unsigned char **getDataStructureType** () const
*Get the **DataStructure** (p. 1461) Type as defined in CommandTypes.h.*
- virtual **ActiveMQQueue** * **cloneDataStructure** () const
Clone this object and return a new instance that the caller now owns, this will be an exact copy of this one.
- virtual void **copyDataStructure** (const **DataStructure** *src)
Copy the contents of the passed object into this objects members, overwriting any existing data.
- virtual std::string **toString** () const
*Returns a string containing the information for this **DataStructure** (p. 1461) such as its type and value of its elements.*
- virtual bool **equals** (const **DataStructure** *value) const
*Compares the **DataStructure** (p. 1461) passed in to this one, and returns if they are equivalent.*
- virtual const cms::Destination * **getCMSDestination** () const
- virtual cms::Destination::DestinationType **getDestinationType** () const
Retrieve the Destination Type for this Destination.
- virtual cms::Destination * **clone** () const
Creates a new instance of this destination type that is a copy of this one, and returns it.
- virtual void **copy** (const cms::Destination &source)
Copies the contents of the given Destinastion object to this one.
- virtual const cms::CMSProperties & **getCMSProperties** () const
Retrieve any properties that might be part of the destination that was specified.
- virtual std::string **getQueueName** () const throw (cms::CMSException)
Gets the name of this queue.

Static Public Attributes

- static const unsigned char **ID _ACTIVEMQQUEUE** = 100

6.56.1 Constructor & Destructor Documentation

6.56.1.1 `activemq::commands::ActiveMQQueue::ActiveMQQueue ()`

6.56.1.2 `activemq::commands::ActiveMQQueue::ActiveMQQueue (const std::string & name)`

6.56.1.3 `virtual activemq::commands::ActiveMQQueue::~~ActiveMQQueue ()`
[inline, virtual]

6.56.2 Member Function Documentation

6.56.2.1 `virtual cms::Destination* activemq::commands::ActiveMQQueue::clone ()`
`const` [inline, virtual]

Creates a new instance of this destination type that is a copy of this one, and returns it.

Returns:

cloned copy of this object

Implements **cms::Destination** (p. 1481).

6.56.2.2 `virtual ActiveMQQueue* activemq::commands::ActiveMQQueue::cloneDataStructure ()`
`const` [virtual]

Clone this object and return a new instance that the caller now owns, this will be an exact copy of this one.

Returns:

new copy of this object.

Reimplemented from **activemq::commands::ActiveMQDestination** (p. 276).

6.56.2.3 `virtual void activemq::commands::ActiveMQQueue::copy (const cms::Destination & source)` [inline, virtual]

Copies the contents of the given Destination object to this one.

Parameters:

source The source Destination object.

Implements **cms::Destination** (p. 1481).

6.56.2.4 `virtual void activemq::commands::ActiveMQQueue::copyDataStructure (const DataStructure * src)` [virtual]

Copy the contents of the passed object into this objects members, overwriting any existing data.

Returns:

src - Source Object

Reimplemented from `activemq::commands::ActiveMQDestination` (p. 277).

6.56.2.5 `virtual bool activemq::commands::ActiveMQQueue::equals (const DataStructure * value) const [virtual]`

Compares the `DataStructure` (p. 1461) passed in to this one, and returns if they are equivalent. Equivalent here means that they are of the same type, and that each element of the objects are the same.

Returns:

true if `DataStructure`'s are Equal.

Reimplemented from `activemq::commands::ActiveMQDestination` (p. 278).

6.56.2.6 `virtual const cms::Destination* activemq::commands::ActiveMQQueue::getCMSDestination () const [inline, virtual]`

Returns:

the `cms::Destination` (p. 1480) interface pointer that the objects that derive from this class implement.

Reimplemented from `activemq::commands::ActiveMQDestination` (p. 278).

6.56.2.7 `virtual const cms::CMSProperties& activemq::commands::ActiveMQQueue::getCMSProperties () const [inline, virtual]`

Retrieve any properties that might be part of the destination that was specified. This is a deviation from the JMS spec but necessary due to C++ restrictions.

Returns:

const reference to a properties object.

Implements `cms::Destination` (p. 1481).

6.56.2.8 `virtual unsigned char activemq::commands::ActiveMQQueue::getDataStructureType () const [virtual]`

Get the `DataStructure` (p. 1461) Type as defined in `CommandTypes.h`.

Returns:

The type of the data structure

Reimplemented from `activemq::commands::ActiveMQDestination` (p. 278).

6.56.2.9 `virtual cms::Destination::DestinationType activemq::commands::ActiveMQQueue::getDestinationType () const [inline, virtual]`

Retrieve the Destination Type for this Destination.

Returns:

The Destination Type

Implements `activemq::commands::ActiveMQDestination` (p. 279).

References `cms::Destination::QUEUE`.

6.56.2.10 `virtual std::string activemq::commands::ActiveMQQueue::getQueueName () const throw (cms::CMSEException) [inline, virtual]`

Gets the name of this queue.

Returns:

The queue name.

Implements `cms::Queue` (p. 2674).

6.56.2.11 `virtual std::string activemq::commands::ActiveMQQueue::toString () const [virtual]`

Returns a string containing the information for this **DataStructure** (p. 1461) such as its type and value of its elements.

Returns:

formatted string useful for debugging.

Reimplemented from `activemq::commands::ActiveMQDestination` (p. 282).

6.56.3 Field Documentation

6.56.3.1 `const unsigned char activemq::commands::ActiveMQQueue::ID _ - ACTIVEMQQUEUE = 100 [static]`

The documentation for this class was generated from the following file:

- `src/main/activemq/commands/ActiveMQQueue.h`

6.57 activemq::wireformat::openwire::marshal::v3::ActiveMQQueueMarshaller Class Reference

Marshaling code for Open Wire Format for **ActiveMQQueueMarshaller** (p. 423).

#include <src/main/activemq/wireformat/openwire/marshal/v3/ActiveMQQueueMarshaller.h>Inheritance diagram for activemq::wireformat::openwire::marshal::v3::ActiveMQQueueMarshaller:

Public Member Functions

- **ActiveMQQueueMarshaller** ()
- virtual **~ActiveMQQueueMarshaller** ()

Creates a new instance of this marshalable type.
- virtual unsigned char **getDataStructureType** () const
Get the Data Structure Type that identifies this Marshaler.
- virtual void **tightUnmarshal** (**OpenWireFormat *wireFormat**, **commands::DataStructure *dataStructure**, **decaf::io::DataInputStream *dataIn**, **utils::BooleanStream *bs**) throw (**decaf::io::IOException**)
Un-marshal an object instance from the data input stream.
- virtual int **tightMarshal** (**OpenWireFormat *wireFormat**, **commands::DataStructure *dataStructure**, **utils::BooleanStream *bs**) throw (**decaf::io::IOException**)
Write the booleans that this object uses to a BooleanStream.
- virtual void **tightMarshal2** (**OpenWireFormat *wireFormat**, **commands::DataStructure *dataStructure**, **decaf::io::DataOutputStream *dataOut**, **utils::BooleanStream *bs**) throw (**decaf::io::IOException**)
Write a object instance to data output stream.
- virtual void **looseUnmarshal** (**OpenWireFormat *wireFormat**, **commands::DataStructure *dataStructure**, **decaf::io::DataInputStream *dataIn**) throw (**decaf::io::IOException**)
Un-marshal an object instance from the data input stream.
- virtual void **looseMarshal** (**OpenWireFormat *wireFormat**, **commands::DataStructure *dataStructure**, **decaf::io::DataOutputStream *dataOut**) throw (**decaf::io::IOException**)
Write a object instance to data output stream.

6.57.1 Detailed Description

Marshaling code for Open Wire Format for **ActiveMQQueueMarshaller** (p. 423). NOTE!: This file is auto generated - do not modify! if you need to make a change, please see the Java Classes in the activemq-openwire-generator module

6.57.2 Constructor & Destructor Documentation

6.57.2.1 `activemq::wireformat::openwire::marshal::v3::ActiveMQQueueMarshaller::ActiveMQQueueMarshaller()` [inline]

6.57.2.2 `virtual activemq::wireformat::openwire::marshal::v3::ActiveMQQueueMarshaller::~~ActiveMQQueueMarshaller()` [inline, virtual]

6.57.3 Member Function Documentation

6.57.3.1 `virtual commands::DataStructure* activemq::wireformat::openwire::marshal::v3::ActiveMQQueueMarshaller::createObject() const` [virtual]

Creates a new instance of this marshalable type.

Returns:

new DataStructure object pointer caller owns it.

Implements `activemq::wireformat::openwire::marshal::DataStreamMarshaller` (p. 1419).

6.57.3.2 `virtual unsigned char activemq::wireformat::openwire::marshal::v3::ActiveMQQueueMarshaller::getDataStructureType() const` [virtual]

Get the Data Structure Type that identifies this Marshaler.

Returns:

byte holding the data structure type value

Implements `activemq::wireformat::openwire::marshal::DataStreamMarshaller` (p. 1424).

6.57.3.3 `virtual void activemq::wireformat::openwire::marshal::v3::ActiveMQQueueMarshaller::looseMarshal(OpenWireFormat * wireFormat, commands::DataStructure * dataStructure, decaf::io::DataOutputStream * dataOut) throw (decaf::io::IOException)` [virtual]

Write a object instance to data output stream.

Parameters:

wireFormat - describes the wire format of the broker

dataStructure - Object to be marshaled

dataOut - BinaryWriter that provides that data sink

Exceptions:

IOException if an error occurs during the marshal.

Reimplemented from `activemq::wireformat::openwire::marshal::v3::ActiveMQDestinationMarshaller` (p. 286).

6.57.3.4 `virtual void activemq::wireformat::openwire::marshal::v3::ActiveMQQueueMarshaller::looseUnmarshal (OpenWireFormat * wireFormat, commands::DataStructure * dataStructure, decaf::io::DataInputStream * dataIn) throw (decaf::io::IOException)` [virtual]

Un-marshall an object instance from the data input stream.

Parameters:

wireFormat - describes the wire format of the broker

dataStructure - Object to be marshaled

dataIn - BinaryReader that provides that data source

Exceptions:

IOException if an error occurs during the unmarshal.

Reimplemented from `activemq::wireformat::openwire::marshal::v3::ActiveMQDestinationMarshaller` (p. 286).

6.57.3.5 `virtual int activemq::wireformat::openwire::marshal::v3::ActiveMQQueueMarshaller::tightMarshal1 (OpenWireFormat * wireFormat, commands::DataStructure * dataStructure, utils::BooleanStream * bs) throw (decaf::io::IOException)` [virtual]

Write the booleans that this object uses to a BooleanStream.

Parameters:

wireFormat - describes the wire format of the broker

dataStructure - Object to be marshaled

bs - BooleanStream stream used to pack bits from the wire.

Returns:

int value indicating the size of the marshaled object.

Exceptions:

IOException if an error occurs during the marshal.

Reimplemented from `activemq::wireformat::openwire::marshal::v3::ActiveMQDestinationMarshaller` (p. 287).

```

6.57.3.6 virtual void ac-
    tivemq::wireformat::openwire::marshal::v3::ActiveMQQueueMarshaller::tightMarshal2
    (OpenWireFormat * wireFormat, commands::DataStructure
    * dataStructure, decaf::io::DataOutputStream * dataOut,
    utils::BooleanStream * bs) throw ( decaf::io::IOException ) [virtual]

```

Write a object instance to data output stream.

Parameters:

wireFormat - describes the wire format of the broker
dataStructure - Object to be marshaled
dataOut - BinaryReader that provides that data sink
bs - BooleanStream stream used to pack bits from the wire.

Exceptions:

IOException if an error occurs during the marshal.

Reimplemented from `activemq::wireformat::openwire::marshal::v3::ActiveMQDestinationMarshaller` (p. 287).

```

6.57.3.7 virtual void ac-
    tivemq::wireformat::openwire::marshal::v3::ActiveMQQueueMarshaller::tightUnmarshal
    (OpenWireFormat * wireFormat, commands::DataStructure *
    dataStructure, decaf::io::DataInputStream * dataIn, utils::BooleanStream
    * bs) throw ( decaf::io::IOException ) [virtual]

```

Un-marshall an object instance from the data input stream.

Parameters:

wireFormat - describes the wire format of the broker.
dataStructure - Object to be un-marshaled.
dataIn - BinaryReader that provides that data.
bs - BooleanStream stream used to unpack bits from the wire.

Exceptions:

IOException if an error occurs during the unmarshal.

Reimplemented from `activemq::wireformat::openwire::marshal::v3::ActiveMQDestinationMarshaller` (p. 288).

The documentation for this class was generated from the following file:

- `src/main/activemq/wireformat/openwire/marshal/v3/ActiveMQQueueMarshaller.h`

6.58 activemq:wireformat::openwire::marshal::v1::ActiveMQQueueMarshaller Class Reference

Write a object instance to data output stream.

6.58.1 Detailed Description

Marshaling code for Open Wire Format for **ActiveMQQueueMarshaller** (p. 427). NOTE!: This file is auto generated - do not modify! if you need to make a change, please see the Java Classes in the activemq-openwire-generator module

6.58.2 Constructor & Destructor Documentation

6.58.2.1 `activemq::wireformat::openwire::marshal::v1::ActiveMQQueueMarshaller::ActiveMQQueueMarshaller()` [inline]

6.58.2.2 `virtual activemq::wireformat::openwire::marshal::v1::ActiveMQQueueMarshaller::~~ActiveMQQueueMarshaller()` [inline, virtual]

6.58.3 Member Function Documentation

6.58.3.1 `virtual commands::DataStructure* activemq::wireformat::openwire::marshal::v1::ActiveMQQueueMarshaller::createObject() const` [virtual]

Creates a new instance of this marshalable type.

Returns:

new DataStructure object pointer caller owns it.

Implements `activemq::wireformat::openwire::marshal::DataStreamMarshaller` (p. 1419).

6.58.3.2 `virtual unsigned char activemq::wireformat::openwire::marshal::v1::ActiveMQQueueMarshaller::getDataStructureType() const` [virtual]

Get the Data Structure Type that identifies this Marshaler.

Returns:

byte holding the data structure type value

Implements `activemq::wireformat::openwire::marshal::DataStreamMarshaller` (p. 1424).

6.58.3.3 `virtual void activemq::wireformat::openwire::marshal::v1::ActiveMQQueueMarshaller::looseMarshal(OpenWireFormat * wireFormat, commands::DataStructure * dataStructure, decaf::io::DataOutputStream * dataOut) throw (decaf::io::IOException)` [virtual]

Write a object instance to data output stream.

Parameters:

wireFormat - describes the wire format of the broker

dataStructure - Object to be marshaled

dataOut - BinaryWriter that provides that data sink

Exceptions:

IOException if an error occurs during the marshal.

Reimplemented from `activemq::wireformat::openwire::marshal::v1::ActiveMQDestinationMarshaller` (p. 290).

6.58.3.4 `virtual void activemq::wireformat::openwire::marshal::v1::ActiveMQQueueMarshaller::looseUnmarshal (OpenWireFormat * wireFormat, commands::DataStructure * dataStructure, decaf::io::DataInputStream * dataIn) throw (decaf::io::IOException)` [virtual]

Un-marshall an object instance from the data input stream.

Parameters:

wireFormat - describes the wire format of the broker

dataStructure - Object to be marshaled

dataIn - BinaryReader that provides that data source

Exceptions:

IOException if an error occurs during the unmarshal.

Reimplemented from `activemq::wireformat::openwire::marshal::v1::ActiveMQDestinationMarshaller` (p. 290).

6.58.3.5 `virtual int activemq::wireformat::openwire::marshal::v1::ActiveMQQueueMarshaller::tightMarshal1 (OpenWireFormat * wireFormat, commands::DataStructure * dataStructure, utils::BooleanStream * bs) throw (decaf::io::IOException)` [virtual]

Write the booleans that this object uses to a BooleanStream.

Parameters:

wireFormat - describes the wire format of the broker

dataStructure - Object to be marshaled

bs - BooleanStream stream used to pack bits from the wire.

Returns:

int value indicating the size of the marshaled object.

Exceptions:

IOException if an error occurs during the marshal.

Reimplemented from `activemq::wireformat::openwire::marshal::v1::ActiveMQDestinationMarshaller` (p. 291).

```

6.58.3.6 virtual void ac-
tivemq::wireformat::openwire::marshal::v1::ActiveMQQueueMarshaller::tightMarshal2
(OpenWireFormat * wireFormat, commands::DataStructure
* dataStructure, decaf::io::DataOutputStream * dataOut,
utils::BooleanStream * bs) throw ( decaf::io::IOException ) [virtual]

```

Write a object instance to data output stream.

Parameters:

wireFormat - describes the wire format of the broker
dataStructure - Object to be marshaled
dataOut - BinaryReader that provides that data sink
bs - BooleanStream stream used to pack bits from the wire.

Exceptions:

IOException if an error occurs during the marshal.

Reimplemented from `activemq::wireformat::openwire::marshal::v1::ActiveMQDestinationMarshaller` (p. 291).

```

6.58.3.7 virtual void ac-
tivemq::wireformat::openwire::marshal::v1::ActiveMQQueueMarshaller::tightUnmarshal
(OpenWireFormat * wireFormat, commands::DataStructure *
dataStructure, decaf::io::DataInputStream * dataIn, utils::BooleanStream
* bs) throw ( decaf::io::IOException ) [virtual]

```

Un-marshall an object instance from the data input stream.

Parameters:

wireFormat - describes the wire format of the broker.
dataStructure - Object to be un-marshaled.
dataIn - BinaryReader that provides that data.
bs - BooleanStream stream used to unpack bits from the wire.

Exceptions:

IOException if an error occurs during the unmarshal.

Reimplemented from `activemq::wireformat::openwire::marshal::v1::ActiveMQDestinationMarshaller` (p. 292).

6.59.1 Detailed Description

Marshaling code for Open Wire Format for **ActiveMQQueueMarshaller** (p. 431). NOTE!: This file is auto generated - do not modify! if you need to make a change, please see the Java Classes in the activemq-openwire-generator module

6.59.2 Constructor & Destructor Documentation

6.59.2.1 `activemq::wireformat::openwire::marshal::v4::ActiveMQQueueMarshaller::ActiveMQQueueMarshaller()` [inline]

6.59.2.2 `virtual activemq::wireformat::openwire::marshal::v4::ActiveMQQueueMarshaller::~~ActiveMQQueueMarshaller()` [inline, virtual]

6.59.3 Member Function Documentation

6.59.3.1 `virtual commands::DataStructure* activemq::wireformat::openwire::marshal::v4::ActiveMQQueueMarshaller::createObject() const` [virtual]

Creates a new instance of this marshalable type.

Returns:

new DataStructure object pointer caller owns it.

Implements `activemq::wireformat::openwire::marshal::DataStreamMarshaller` (p. 1419).

6.59.3.2 `virtual unsigned char activemq::wireformat::openwire::marshal::v4::ActiveMQQueueMarshaller::getDataStructureType() const` [virtual]

Get the Data Structure Type that identifies this Marshaler.

Returns:

byte holding the data structure type value

Implements `activemq::wireformat::openwire::marshal::DataStreamMarshaller` (p. 1424).

6.59.3.3 `virtual void activemq::wireformat::openwire::marshal::v4::ActiveMQQueueMarshaller::looseMarshal(OpenWireFormat * wireFormat, commands::DataStructure * dataStructure, decaf::io::DataOutputStream * dataOut) throw (decaf::io::IOException)` [virtual]

Write a object instance to data output stream.

Parameters:

wireFormat - describes the wire format of the broker

dataStructure - Object to be marshaled

dataOut - BinaryWriter that provides that data sink

Exceptions:

IOException if an error occurs during the marshal.

Reimplemented from `activemq::wireformat::openwire::marshal::v4::ActiveMQDestinationMarshaller` (p. 294).

6.59.3.4 `virtual void activemq::wireformat::openwire::marshal::v4::ActiveMQQueueMarshaller::looseUnmarshal (OpenWireFormat * wireFormat, commands::DataStructure * dataStructure, decaf::io::DataInputStream * dataIn) throw (decaf::io::IOException)` [virtual]

Un-marshall an object instance from the data input stream.

Parameters:

wireFormat - describes the wire format of the broker

dataStructure - Object to be marshaled

dataIn - BinaryReader that provides that data source

Exceptions:

IOException if an error occurs during the unmarshal.

Reimplemented from `activemq::wireformat::openwire::marshal::v4::ActiveMQDestinationMarshaller` (p. 294).

6.59.3.5 `virtual int activemq::wireformat::openwire::marshal::v4::ActiveMQQueueMarshaller::tightMarshal1 (OpenWireFormat * wireFormat, commands::DataStructure * dataStructure, utils::BooleanStream * bs) throw (decaf::io::IOException)` [virtual]

Write the booleans that this object uses to a BooleanStream.

Parameters:

wireFormat - describes the wire format of the broker

dataStructure - Object to be marshaled

bs - BooleanStream stream used to pack bits from the wire.

Returns:

int value indicating the size of the marshaled object.

Exceptions:

IOException if an error occurs during the marshal.

Reimplemented from `activemq::wireformat::openwire::marshal::v4::ActiveMQDestinationMarshaller` (p. 295).

```

6.59.3.6 virtual void ac-
    tivemq::wireformat::openwire::marshal::v4::ActiveMQQueueMarshaller::tightMarshal2
    (OpenWireFormat * wireFormat, commands::DataStructure
    * dataStructure, decaf::io::DataOutputStream * dataOut,
    utils::BooleanStream * bs) throw ( decaf::io::IOException ) [virtual]

```

Write a object instance to data output stream.

Parameters:

wireFormat - describes the wire format of the broker
dataStructure - Object to be marshaled
dataOut - BinaryReader that provides that data sink
bs - BooleanStream stream used to pack bits from the wire.

Exceptions:

IOException if an error occurs during the marshal.

Reimplemented from `activemq::wireformat::openwire::marshal::v4::ActiveMQDestinationMarshaller` (p. 295).

```

6.59.3.7 virtual void ac-
    tivemq::wireformat::openwire::marshal::v4::ActiveMQQueueMarshaller::tightUnmarshal
    (OpenWireFormat * wireFormat, commands::DataStructure *
    dataStructure, decaf::io::DataInputStream * dataIn, utils::BooleanStream
    * bs) throw ( decaf::io::IOException ) [virtual]

```

Un-marshall an object instance from the data input stream.

Parameters:

wireFormat - describes the wire format of the broker.
dataStructure - Object to be un-marshaled.
dataIn - BinaryReader that provides that data.
bs - BooleanStream stream used to unpack bits from the wire.

Exceptions:

IOException if an error occurs during the unmarshal.

Reimplemented from `activemq::wireformat::openwire::marshal::v4::ActiveMQDestinationMarshaller` (p. 296).

6.60.2 Constructor & Destructor Documentation

6.60.2.1 `activemq::wireformat::openwire::marshal::v5::ActiveMQQueueMarshaller::ActiveMQQueueMarshaller()` [inline]

6.60.2.2 `virtual activemq::wireformat::openwire::marshal::v5::ActiveMQQueueMarshaller::~~ActiveMQQueueMarshaller()` [inline, virtual]

6.60.3 Member Function Documentation

6.60.3.1 `virtual commands::DataStructure* activemq::wireformat::openwire::marshal::v5::ActiveMQQueueMarshaller::createObject() const` [virtual]

Creates a new instance of this marshalable type.

Returns:

new DataStructure object pointer caller owns it.

Implements `activemq::wireformat::openwire::marshal::DataStreamMarshaller` (p. 1419).

6.60.3.2 `virtual unsigned char activemq::wireformat::openwire::marshal::v5::ActiveMQQueueMarshaller::getDataStructureType() const` [virtual]

Get the Data Structure Type that identifies this Marshaler.

Returns:

byte holding the data structure type value

Implements `activemq::wireformat::openwire::marshal::DataStreamMarshaller` (p. 1424).

6.60.3.3 `virtual void activemq::wireformat::openwire::marshal::v5::ActiveMQQueueMarshaller::looseMarshal(OpenWireFormat * wireFormat, commands::DataStructure * dataStructure, decaf::io::DataOutputStream * dataOut) throw (decaf::io::IOException)` [virtual]

Write a object instance to data output stream.

Parameters:

wireFormat - describes the wire format of the broker

dataStructure - Object to be marshaled

dataOut - BinaryWriter that provides that data sink

Exceptions:

IOException if an error occurs during the marshal.

Reimplemented from **activemq::wireformat::openwire::marshal::v5::ActiveMQDestinationMarshaller** (p. 298).

6.60.3.4 virtual void activemq::wireformat::openwire::marshal::v5::ActiveMQQueueMarshaller::looseUnmarshal (OpenWireFormat * *wireFormat*, commands::DataStructure * *dataStructure*, decaf::io::DataInputStream * *dataIn*) throw (decaf::io::IOException) [virtual]

Un-marshall an object instance from the data input stream.

Parameters:

wireFormat - describes the wire format of the broker

dataStructure - Object to be marshaled

dataIn - BinaryReader that provides that data source

Exceptions:

IOException if an error occurs during the unmarshal.

Reimplemented from **activemq::wireformat::openwire::marshal::v5::ActiveMQDestinationMarshaller** (p. 298).

6.60.3.5 virtual int activemq::wireformat::openwire::marshal::v5::ActiveMQQueueMarshaller::tightMarshal1 (OpenWireFormat * *wireFormat*, commands::DataStructure * *dataStructure*, utils::BooleanStream * *bs*) throw (decaf::io::IOException) [virtual]

Write the booleans that this object uses to a BooleanStream.

Parameters:

wireFormat - describes the wire format of the broker

dataStructure - Object to be marshaled

bs - BooleanStream stream used to pack bits from the wire.

Returns:

int value indicating the size of the marshaled object.

Exceptions:

IOException if an error occurs during the marshal.

Reimplemented from **activemq::wireformat::openwire::marshal::v5::ActiveMQDestinationMarshaller** (p. 299).

```

6.60.3.6 virtual void ac-
tivemq::wireformat::openwire::marshal::v5::ActiveMQQueueMarshaller::tightMarshal2
(OpenWireFormat * wireFormat, commands::DataStructure
* dataStructure, decaf::io::DataOutputStream * dataOut,
utils::BooleanStream * bs) throw ( decaf::io::IOException ) [virtual]

```

Write a object instance to data output stream.

Parameters:

wireFormat - describes the wire format of the broker
dataStructure - Object to be marshaled
dataOut - BinaryReader that provides that data sink
bs - BooleanStream stream used to pack bits from the wire.

Exceptions:

IOException if an error occurs during the marshal.

Reimplemented from `activemq::wireformat::openwire::marshal::v5::ActiveMQDestinationMarshaller` (p. 299).

```

6.60.3.7 virtual void ac-
tivemq::wireformat::openwire::marshal::v5::ActiveMQQueueMarshaller::tightUnmarshal
(OpenWireFormat * wireFormat, commands::DataStructure *
dataStructure, decaf::io::DataInputStream * dataIn, utils::BooleanStream
* bs) throw ( decaf::io::IOException ) [virtual]

```

Un-marshal an object instance from the data input stream.

Parameters:

wireFormat - describes the wire format of the broker.
dataStructure - Object to be un-marshaled.
dataIn - BinaryReader that provides that data.
bs - BooleanStream stream used to unpack bits from the wire.

Exceptions:

IOException if an error occurs during the unmarshal.

Reimplemented from `activemq::wireformat::openwire::marshal::v5::ActiveMQDestinationMarshaller` (p. 300).

6.61.3 Member Function Documentation

6.61.3.1 `virtual commands::DataStructure* activemq::wireformat::openwire::marshal::v2::ActiveMQQueueMarshaller::createObject() const` [virtual]

Creates a new instance of this marshalable type.

Returns:

new DataStructure object pointer caller owns it.

Implements `activemq::wireformat::openwire::marshal::DataStreamMarshaller` (p. 1419).

6.61.3.2 `virtual unsigned char activemq::wireformat::openwire::marshal::v2::ActiveMQQueueMarshaller::getDataStructureType() const` [virtual]

Get the Data Structure Type that identifies this Marshaler.

Returns:

byte holding the data structure type value

Implements `activemq::wireformat::openwire::marshal::DataStreamMarshaller` (p. 1424).

6.61.3.3 `virtual void activemq::wireformat::openwire::marshal::v2::ActiveMQQueueMarshaller::looseMarshal(OpenWireFormat * wireFormat, commands::DataStructure * dataStructure, decaf::io::DataOutputStream * dataOut) throw (decaf::io::IOException)` [virtual]

Write a object instance to data output stream.

Parameters:

wireFormat - describes the wire format of the broker

dataStructure - Object to be marshaled

dataOut - BinaryWriter that provides that data sink

Exceptions:

IOException if an error occurs during the marshal.

Reimplemented from **activemq::wireformat::openwire::marshal::v2::ActiveMQDestinationMarshaller** (p. 302).

6.61.3.4 `virtual void activemq::wireformat::openwire::marshal::v2::ActiveMQQueueMarshaller::looseUnmarshal (OpenWireFormat * wireFormat, commands::DataStructure * dataStructure, decaf::io::DataInputStream * dataIn) throw (decaf::io::IOException)` [virtual]

Un-marshall an object instance from the data input stream.

Parameters:

wireFormat - describes the wire format of the broker

dataStructure - Object to be marshaled

dataIn - BinaryReader that provides that data source

Exceptions:

IOException if an error occurs during the unmarshal.

Reimplemented from **activemq::wireformat::openwire::marshal::v2::ActiveMQDestinationMarshaller** (p. 302).

6.61.3.5 `virtual int activemq::wireformat::openwire::marshal::v2::ActiveMQQueueMarshaller::tightMarshal1 (OpenWireFormat * wireFormat, commands::DataStructure * dataStructure, utils::BooleanStream * bs) throw (decaf::io::IOException)` [virtual]

Write the booleans that this object uses to a BooleanStream.

Parameters:

wireFormat - describes the wire format of the broker

dataStructure - Object to be marshaled

bs - BooleanStream stream used to pack bits from the wire.

Returns:

int value indicating the size of the marshaled object.

Exceptions:

IOException if an error occurs during the marshal.

Reimplemented from **activemq::wireformat::openwire::marshal::v2::ActiveMQDestinationMarshaller** (p. 303).

```

6.61.3.6 virtual void ac-
    tivemq::wireformat::openwire::marshal::v2::ActiveMQQueueMarshaller::tightMarshal2
    (OpenWireFormat * wireFormat, commands::DataStructure
    * dataStructure, decaf::io::DataOutputStream * dataOut,
    utils::BooleanStream * bs) throw ( decaf::io::IOException ) [virtual]

```

Write a object instance to data output stream.

Parameters:

wireFormat - describes the wire format of the broker
dataStructure - Object to be marshaled
dataOut - BinaryReader that provides that data sink
bs - BooleanStream stream used to pack bits from the wire.

Exceptions:

IOException if an error occurs during the marshal.

Reimplemented from `activemq::wireformat::openwire::marshal::v2::ActiveMQDestinationMarshaller` (p. 303).

```

6.61.3.7 virtual void ac-
    tivemq::wireformat::openwire::marshal::v2::ActiveMQQueueMarshaller::tightUnmarshal
    (OpenWireFormat * wireFormat, commands::DataStructure *
    dataStructure, decaf::io::DataInputStream * dataIn, utils::BooleanStream
    * bs) throw ( decaf::io::IOException ) [virtual]

```

Un-marshall an object instance from the data input stream.

Parameters:

wireFormat - describes the wire format of the broker.
dataStructure - Object to be un-marshaled.
dataIn - BinaryReader that provides that data.
bs - BooleanStream stream used to unpack bits from the wire.

Exceptions:

IOException if an error occurs during the unmarshal.

Reimplemented from `activemq::wireformat::openwire::marshal::v2::ActiveMQDestinationMarshaller` (p. 304).

6.62 activemq::core::ActiveMQSession Class Reference

#include <src/main/activemq/core/ActiveMQSession.h> Inheritance diagram for activemq::core::ActiveMQSession:

Public Member Functions

- **ActiveMQSession** (const **Pointer**< **commands::SessionInfo** > &sessionInfo, **cms::Session::AcknowledgeMode** ackMode, const **decaf::util::Properties** &properties, **ActiveMQConnection** *connection)
- virtual **~ActiveMQSession** ()
- void **redispatch** (**MessageDispatchChannel** &unconsumedMessages)
Redispatches the given set of unconsumed messages to the consumers.
- void **start** ()
Stops asynchronous message delivery.
- void **stop** ()
Starts asynchronous message delivery.
- bool **isStarted** () const
Indicates whether or not the session is currently in the started state.
- bool **isAutoAcknowledge** () const
- bool **isDupsOkAcknowledge** () const
- bool **isClientAcknowledge** () const
- bool **isIndividualAcknowledge** () const
- void **fire** (const **exceptions::ActiveMQException** &ex)
Fires the given exception to the exception listener of the connection.
- virtual void **dispatch** (const **Pointer**< **MessageDispatch** > &message)
Dispatches a message to a particular consumer.
- virtual void **close** () throw (**cms::CMSEException**)
Closes this session as well as any active child consumers or producers.
- virtual void **commit** () throw (**cms::CMSEException**)
Commits all messages done in this transaction and releases any locks currently held.
- virtual void **rollback** () throw (**cms::CMSEException**)
Rollsback all messages done in this transaction and releases any locks currently held.
- virtual void **recover** () throw (**cms::CMSEException**)
Stops message delivery in this session, and restarts message delivery with the oldest unacknowledged message.
- virtual **cms::MessageConsumer** * **createConsumer** (const **cms::Destination** *destination) throw (**cms::CMSEException**)

Creates a MessageConsumer for the specified destination.

- virtual **cms::MessageConsumer** * **createConsumer** (const **cms::Destination** *destination, const std::string &selector) throw (cms::CMSEException)

Creates a MessageConsumer for the specified destination, using a message selector.

- virtual **cms::MessageConsumer** * **createConsumer** (const **cms::Destination** *destination, const std::string &selector, bool noLocal) throw (cms::CMSEException)

Creates a MessageConsumer for the specified destination, using a message selector.

- virtual **cms::MessageConsumer** * **createDurableConsumer** (const **cms::Topic** *destination, const std::string &name, const std::string &selector, bool noLocal=false) throw (cms::CMSEException)

Creates a durable subscriber to the specified topic, using a message selector.

- virtual **cms::MessageProducer** * **createProducer** (const **cms::Destination** *destination) throw (cms::CMSEException)

Creates a MessageProducer to send messages to the specified destination.

- virtual **cms::QueueBrowser** * **createBrowser** (const **cms::Queue** *queue) throw (cms::CMSEException)

Creates a new QueueBrowser to peek at Messages on the given Queue.

- virtual **cms::QueueBrowser** * **createBrowser** (const **cms::Queue** *queue, const std::string &selector) throw (cms::CMSEException)

Creates a new QueueBrowser to peek at Messages on the given Queue.

- virtual **cms::Queue** * **createQueue** (const std::string &queueName) throw (cms::CMSEException)

Creates a queue identity given a Queue name.

- virtual **cms::Topic** * **createTopic** (const std::string &topicName) throw (cms::CMSEException)

Creates a topic identity given a Queue name.

- virtual **cms::TemporaryQueue** * **createTemporaryQueue** () throw (cms::CMSEException)

Creates a TemporaryQueue object.

- virtual **cms::TemporaryTopic** * **createTemporaryTopic** () throw (cms::CMSEException)

Creates a TemporaryTopic object.

- virtual **cms::Message** * **createMessage** () throw (cms::CMSEException)

Creates a new Message.

- virtual **cms::BytesMessage** * **createBytesMessage** () throw (cms::CMSEException)

Creates a BytesMessage.

- virtual **cms::BytesMessage** * **createBytesMessage** (const unsigned char *bytes, std::size_t bytesSize) throw (cms::CMSEException)
Creates a BytesMessage and sets the pay-load to the passed value.
- virtual **cms::StreamMessage** * **createStreamMessage** () throw (cms::CMSEException)
Creates a new StreamMessage.
- virtual **cms::TextMessage** * **createTextMessage** () throw (cms::CMSEException)
Creates a new TextMessage.
- virtual **cms::TextMessage** * **createTextMessage** (const std::string &text) throw (cms::CMSEException)
Creates a new TextMessage and set the text to the value given.
- virtual **cms::MapMessage** * **createMapMessage** () throw (cms::CMSEException)
Creates a new MapMessage.
- virtual **cms::Session::AcknowledgeMode** **getAcknowledgeMode** () const throw (cms::CMSEException)
Returns the acknowledgment mode of the session.
- virtual bool **isTransacted** () const throw (cms::CMSEException)
Gets if the Sessions is a Transacted Session.
- virtual void **unsubscribe** (const std::string &name) throw (cms::CMSEException)
Unsubscribes a durable subscription that has been created by a client.
- void **send** (cms::Message *message, **ActiveMQProducer** *producer, **util::Usage** *usage) throw (cms::CMSEException)
Sends a message from the Producer specified using this session's connection the message will be sent using the best available means depending on the configuration of the connection.
- **cms::ExceptionListener** * **getExceptionListener** ()
This method gets any registered exception listener of this sessions connection and returns it.
- const **commands::SessionInfo** & **getSessionInfo** () const
Gets the Session Information object for this session, if the session is closed than this method throws an exception.
- const **commands::SessionId** & **getSessionId** () const
Gets the Session Id object for this session, if the session is closed than this method throws an exception.
- **ActiveMQConnection** * **getConnection** () const
*Gets the **ActiveMQConnection** (p. 233) that is associated with this session.*
- long long **getLastDeliveredSequenceId** () const
Gets the currently set Last Delivered Sequence Id.
- void **setLastDeliveredSequenceId** (long long value)

Sets the value of the Last Delivered Sequence Id.

- void **oneway** (**Pointer**< **commands::Command** > command) throw (**activemq::exceptions::ActiveMQException**)

Sends a oneway message.

- void **syncRequest** (**Pointer**< **commands::Command** > command, unsigned int timeout=0) throw (**activemq::exceptions::ActiveMQException**)

Sends a synchronous request and returns the response from the broker.

- void **disposeOf** (**decaf::lang::Pointer**< **commands::ConsumerId** > id, long long lastDeliveredSequenceId) throw (**activemq::exceptions::ActiveMQException**)

Dispose of a Consumer from this session.

- void **disposeOf** (**decaf::lang::Pointer**< **commands::ProducerId** > id) throw (**activemq::exceptions::ActiveMQException**)

Dispose of a Producer from this session.

- void **doStartTransaction** () throw (**exceptions::ActiveMQException**)

Starts if not already start a Transaction for this Session.

- void **acknowledge** ()

Request that the Session inform all its consumers to Acknowledge all Message's that have been received so far.

- void **deliverAcks** ()

Request that this Session inform all of its consumers to deliver their pending acks.

- void **clearMessagesInProgress** ()

Request that this Session inform all of its consumers to clear all messages that are currently in progress.

- void **wakeup** ()

Causes the Session to wakeup its executor and ensure all messages are dispatched.

6.62.1.1 `activemq::core::ActiveMQSession::ActiveMQSession (const Pointer< commands::SessionInfo > & sessionInfo, cms::Session::AcknowledgeMode ackMode, const decaf::util::Properties & properties, ActiveMQConnection * connection)`

6.62.1.2 `virtual activemq::core::ActiveMQSession::~~ActiveMQSession ()` [virtual]

6.62.2 Member Function Documentation

6.62.2.1 `void activemq::core::ActiveMQSession::acknowledge ()`

Request that the Session inform all its consumers to Acknowledge all Message's that have been received so far.

6.62.2.2 `void activemq::core::ActiveMQSession::clearMessagesInProgress ()`

Request that this Session inform all of its consumers to clear all messages that are currently in progress.

6.62.2.3 `virtual void activemq::core::ActiveMQSession::close () throw (cms::CMSEException)` [virtual]

Closes this session as well as any active child consumers or producers.

Exceptions:

CMSEException

Implements `cms::Session` (p. 2842).

6.62.2.4 `virtual void activemq::core::ActiveMQSession::commit () throw (cms::CMSEException)` [virtual]

Commits all messages done in this transaction and releases any locks currently held.

Exceptions:

CMSEException

Implements `cms::Session` (p. 2843).

6.62.2.5 `virtual cms::QueueBrowser* activemq::core::ActiveMQSession::createBrowser (const cms::Queue * queue, const std::string & selector) throw (cms::CMSEException)` [virtual]

Creates a new QueueBrowser to peek at Messages on the given Queue.

Parameters:

queue the Queue to browse

selector the Message selector to filter which messages are browsed.

Returns:

New QueueBrowser that is owned by the caller.

Exceptions:

CMSEException - If an internal error occurs.

InvalidDestinationException - if the destination given is invalid.

Implements **cms::Session** (p. 2843).

6.62.2.6 `virtual cms::QueueBrowser* activemq::core::ActiveMQSession::createBrowser (const cms::Queue * queue) throw (cms::CMSEException) [virtual]`

Creates a new QueueBrowser to peek at Messages on the given Queue.

Parameters:

queue the Queue to browse

Returns:

New QueueBrowser that is owned by the caller.

Exceptions:

CMSEException - If an internal error occurs.

InvalidDestinationException - if the destination given is invalid.

Implements **cms::Session** (p. 2843).

6.62.2.7 `virtual cms::BytesMessage* activemq::core::ActiveMQSession::createBytesMessage (const unsigned char * bytes, std::size_t bytesSize) throw (cms::CMSEException) [virtual]`

Creates a BytesMessage and sets the pay-load to the passed value.

Parameters:

bytes - an array of bytes to set in the message

bytesSize - the size of the bytes array, or number of bytes to use

Returns:

a newly created BytesMessage.

Exceptions:

CMSEException

Implements **cms::Session** (p. 2844).

6.62.2.8 `virtual cms::BytesMessage* activemq::core::ActiveMQSession::createBytesMessage () throw (cms::CMSException) [virtual]`

Creates a BytesMessage.

Returns:

a newly created BytesMessage.

Exceptions:

CMSException

Implements `cms::Session` (p. 2844).

6.62.2.9 `virtual cms::MessageConsumer* activemq::core::ActiveMQSession::createConsumer (const cms::Destination * destination, const std::string & selector, bool noLocal) throw (cms::CMSException) [virtual]`

Creates a MessageConsumer for the specified destination, using a message selector.

Parameters:

destination - The Destination that this consumer receiving messages for.

selector - The Message Selector string to use for this destination

noLocal - if true, and the destination is a topic, inhibits the delivery of messages published by its own connection. The behavior for NoLocal is not specified if the destination is a queue.

Exceptions:

CMSException

Implements `cms::Session` (p. 2844).

6.62.2.10 `virtual cms::MessageConsumer* activemq::core::ActiveMQSession::createConsumer (const cms::Destination * destination, const std::string & selector) throw (cms::CMSException) [virtual]`

Creates a MessageConsumer for the specified destination, using a message selector.

Parameters:

destination - The Destination that this consumer receiving messages for.

selector - The Message Selector string to use for this destination

Exceptions:

CMSException

Implements `cms::Session` (p. 2845).

6.62.2.11 `virtual cms::MessageConsumer* activemq::core::ActiveMQSession::createConsumer (const cms::Destination * destination) throw (cms::CMSException) [virtual]`

Creates a MessageConsumer for the specified destination.

Parameters:

destination - The Destination that this consumer receiving messages for.

Exceptions:

CMSException

Implements `cms::Session` (p. 2845).

6.62.2.12 `virtual cms::MessageConsumer* activemq::core::ActiveMQSession::createDurableConsumer (const cms::Topic * destination, const std::string & name, const std::string & selector, bool noLocal = false) throw (cms::CMSException) [virtual]`

Creates a durable subscriber to the specified topic, using a message selector.

Parameters:

destination - the topic to subscribe to

name - The name used to identify the subscription

selector - only messages matching the selector are received

noLocal - if true, and the destination is a topic, inhibits the delivery of messages published by its own connection. The behavior for NoLocal is not specified if the destination is a queue.

Exceptions:

CMSException

Implements `cms::Session` (p. 2846).

6.62.2.13 `virtual cms::MapMessage* activemq::core::ActiveMQSession::createMapMessage () throw (cms::CMSException) [virtual]`

Creates a new MapMessage.

Returns:

a newly created MapMessage.

Exceptions:

CMSException

Implements `cms::Session` (p. 2846).

6.62.2.14 `virtual cms::Message* activemq::core::ActiveMQSession::createMessage
() throw (cms::CMSException) [virtual]`

Creates a new Message.

Exceptions:

CMSException

Implements **cms::Session** (p. 2847).

6.62.2.15 `virtual cms::MessageProducer* ac-
tivismq::core::ActiveMQSession::createProducer (const
cms::Destination * destination) throw (cms::CMSException) [virtual]`

Creates a MessageProducer to send messages to the specified destination.

Parameters:

destination - the Destination to publish on

Exceptions:

CMSException

Implements **cms::Session** (p. 2847).

6.62.2.16 `virtual cms::Queue* activemq::core::ActiveMQSession::createQueue
(const std::string & queueName) throw (cms::CMSException)
[virtual]`

Creates a queue identity given a Queue name.

Parameters:

queueName - the name of the new Queue

Exceptions:

CMSException

Implements **cms::Session** (p. 2847).

6.62.2.17 `virtual cms::StreamMessage* ac-
tivismq::core::ActiveMQSession::createStreamMessage ()
throw (cms::CMSException) [virtual]`

Creates a new StreamMessage.

Returns:

a newly created StreamMessage.

Exceptions:

CMSException

Implements **cms::Session** (p. 2848).

6.62.2.18 `virtual cms::TemporaryQueue* activemq::core::ActiveMQSession::createTemporaryQueue () throw (cms::CMSException) [virtual]`

Creates a TemporaryQueue object.

Exceptions:

CMSException

Implements **cms::Session** (p. 2848).

6.62.2.19 `virtual cms::TemporaryTopic* activemq::core::ActiveMQSession::createTemporaryTopic () throw (cms::CMSException) [virtual]`

Creates a TemporaryTopic object.

Exceptions:

CMSException

Implements **cms::Session** (p. 2848).

6.62.2.20 `virtual cms::TextMessage* activemq::core::ActiveMQSession::createTextMessage (const std::string & text) throw (cms::CMSException) [virtual]`

Creates a new TextMessage and set the text to the value given.

Parameters:

text - The initial text for the message

Returns:

a newly created TextMessage with the given Text set in the Message body.

Exceptions:

CMSException

Implements **cms::Session** (p. 2848).

6.62.2.21 `virtual cms::TextMessage* activemq::core::ActiveMQSession::createTextMessage () throw (cms::CMSException) [virtual]`

Creates a new TextMessage.

Returns:

a newly created `TextMessage`.

Exceptions:

CMSEException

Implements `cms::Session` (p. 2849).

6.62.2.22 `virtual cms::Topic* activemq::core::ActiveMQSession::createTopic (const std::string & topicName) throw (cms::CMSEException) [virtual]`

Creates a topic identity given a Queue name.

Parameters:

topicName - the name of the new Topic

Exceptions:

CMSEException

Implements `cms::Session` (p. 2849).

6.62.2.23 `void activemq::core::ActiveMQSession::deliverAcks ()`

Request that this Session inform all of its consumers to deliver their pending acks.

6.62.2.24 `virtual void activemq::core::ActiveMQSession::dispatch (const Pointer< MessageDispatch > & message) [virtual]`

Dispatches a message to a particular consumer.

Parameters:

message - the message to be dispatched

Implements `activemq::core::Dispatcher` (p. 1536).

6.62.2.25 `void activemq::core::ActiveMQSession::disposeOf (decaf::lang::Pointer< commands::ProducerId > id) throw (activemq::exceptions::ActiveMQException)`

Dispose of a Producer from this session. Removes it from the Connection and clean up any resources associated with it.

Parameters:

id - the Id of the Producer to dispose.

Exceptions:

ActiveMQException if an internal error occurs.

6.62.2.26 `void activemq::core::ActiveMQSession::disposeOf (decaf::lang::Pointer< commands::ConsumerId > id, long long lastDeliveredSequenceId) throw (activemq::exceptions::ActiveMQException)`

Dispose of a Consumer from this session. Removes it from the Connection and clean up any resources associated with it.

Parameters:

id The Id of the Consumer to dispose.

lastDeliveredSequenceId The Broker Sequence Id of the last message the Consumer delivered.

Exceptions:

ActiveMQException if an internal error occurs.

6.62.2.27 `void activemq::core::ActiveMQSession::doStartTransaction () throw (exceptions::ActiveMQException)`

Starts if not already start a Transaction for this Session. If the session is not a Transacted Session then an exception is thrown. If a transaction is already in progress then this method has no effect.

Exceptions:

ActiveMQException if this is not a Transacted Session.

6.62.2.28 `void activemq::core::ActiveMQSession::fire (const exceptions::ActiveMQException & ex)`

Fires the given exception to the exception listener of the connection.

6.62.2.29 `virtual cms::Session::AcknowledgeMode activemq::core::ActiveMQSession::getAcknowledgeMode () const throw (cms::CMSException) [virtual]`

Returns the acknowledgment mode of the session.

Returns:

the Sessions Acknowledge Mode

Implements `cms::Session` (p. 2849).

6.62.2.30 `ActiveMQConnection* activemq::core::ActiveMQSession::getConnection () const [inline]`

Gets the `ActiveMQConnection` (p. 233) that is associated with this session.

6.62.2.31 `cms::ExceptionListener* activemq::core::ActiveMQSession::getExceptionListener()`

This method gets any registered exception listener of this sessions connection and returns it. Mainly intended for use by the objects that this session creates so that they can notify the client of exceptions that occur in the context of another thread.

Returns:

`cms::ExceptionListener` (p. 1581) pointer or NULL

6.62.2.32 `long long activemq::core::ActiveMQSession::getLastDeliveredSequenceId() const [inline]`

Gets the currently set Last Delivered Sequence Id.

Returns:

long long containing the sequence id of the last delivered Message.

6.62.2.33 `const commands::SessionId& activemq::core::ActiveMQSession::getSessionId() const [inline]`

Gets the Session Id object for this session, if the session is closed than this method throws an exception.

Returns:

SessionId Reference

6.62.2.34 `const commands::SessionInfo& activemq::core::ActiveMQSession::getSessionInfo() const [inline]`

Gets the Session Information object for this session, if the session is closed than this method throws an exception.

Returns:

SessionInfo Reference

6.62.2.35 `bool activemq::core::ActiveMQSession::isAutoAcknowledge() const [inline]`

References `cms::Session::AUTO_ACKNOWLEDGE`.

6.62.2.36 `bool activemq::core::ActiveMQSession::isClientAcknowledge() const [inline]`

References `cms::Session::CLIENT_ACKNOWLEDGE`.

6.62.2.37 `bool activemq::core::ActiveMQSession::isDupsOkAcknowledge () const [inline]`

References `cms::Session::DUPS_OK_ACKNOWLEDGE`.

6.62.2.38 `bool activemq::core::ActiveMQSession::isIndividualAcknowledge () const [inline]`

References `cms::Session::INDIVIDUAL_ACKNOWLEDGE`.

6.62.2.39 `bool activemq::core::ActiveMQSession::isStarted () const`

Indicates whether or not the session is currently in the started state.

6.62.2.40 `virtual bool activemq::core::ActiveMQSession::isTransacted () const throw (cms::CMSEException) [virtual]`

Gets if the Sessions is a Transacted Session.

Returns:

transacted true - false.

Implements `cms::Session` (p. 2850).

6.62.2.41 `void activemq::core::ActiveMQSession::oneway (Pointer< commands::Command > command) throw (activemq::exceptions::ActiveMQException)`

Sends a oneway message.

Parameters:

command The message to send.

Exceptions:

ActiveMQException if not currently connected, or if the operation fails for any reason.

6.62.2.42 `virtual void activemq::core::ActiveMQSession::recover () throw (cms::CMSEException) [virtual]`

Stops message delivery in this session, and restarts message delivery with the oldest unacknowledged message. All consumers deliver messages in a serial order. Acknowledging a received message automatically acknowledges all messages that have been delivered to the client.

Restarting a session causes it to take the following actions:

- Stop message delivery
- Mark all messages that might have been delivered but not acknowledged as "redelivered"

- Restart the delivery sequence including all unacknowledged messages that had been previously delivered. Redelivered messages do not have to be delivered in exactly their original delivery order.

Exceptions:

CMSEException - if the CMS provider fails to stop and restart message delivery due to some internal error.

IllegalStateException - if the method is called by a transacted session.

Implements **cms::Session** (p. 2850).

6.62.2.43 void activemq::core::ActiveMQSession::redispatch (MessageDispatchChannel & *unconsumedMessages*)

Redispatches the given set of unconsumed messages to the consumers.

Parameters:

unconsumedMessages - unconsumed messages to be redelivered.

6.62.2.44 virtual void activemq::core::ActiveMQSession::rollback () throw (cms::CMSEException) [virtual]

Rollsback all messages done in this transaction and releases any locks currently held.

Exceptions:

CMSEException

Implements **cms::Session** (p. 2850).

6.62.2.45 void activemq::core::ActiveMQSession::send (cms::Message * *message*, ActiveMQProducer * *producer*, util::Usage * *usage*) throw (cms::CMSEException)

Sends a message from the Producer specified using this session's connection the message will be sent using the best available means depending on the configuration of the connection. Asynchronous sends will be chosen if at all possible.

Parameters:

message The message to send to the broker.

producer The sending Producer

usage Pointer to a Usage tracker which if set will be increased by the size of the given message.

Exceptions:

CMSEException

6.62.2.46 `void activemq::core::ActiveMQSession::setLastDeliveredSequenceId (long long value) [inline]`

Sets the value of the Last Delivered Sequence Id.

Parameters:

value The new value to assign to the Last Delivered Sequence Id property.

6.62.2.47 `void activemq::core::ActiveMQSession::start ()`

Stops asynchronous message delivery.

6.62.2.48 `void activemq::core::ActiveMQSession::stop ()`

Starts asynchronous message delivery.

6.62.2.49 `void activemq::core::ActiveMQSession::syncRequest (Pointer< commands::Command > command, unsigned int timeout = 0) throw (activemq::exceptions::ActiveMQException)`

Sends a synchronous request and returns the response from the broker. Converts any error responses into an exception.

Parameters:

command The request command.

timeout The time to wait for a response, default is zero or infinite.

Exceptions:

ActiveMQException thrown if an error response was received from the broker, or if any other error occurred.

6.62.2.50 `virtual void activemq::core::ActiveMQSession::unsubscribe (const std::string & name) throw (cms::CMSException) [virtual]`

Unsubscribes a durable subscription that has been created by a client. This method deletes the state being maintained on behalf of the subscriber by its provider. It is erroneous for a client to delete a durable subscription while there is an active MessageConsumer or Subscriber for the subscription, or while a consumed message is part of a pending transaction or has not been acknowledged in the session.

Parameters:

name the name used to identify this subscription

Exceptions:

CMSException

Implements `cms::Session` (p. 2851).

6.62.2.51 void activemq::core::ActiveMQSession::wakeup ()

Causes the Session to wakeup its executor and ensure all messages are dispatched.

6.62.3 Friends And Related Function Documentation

6.62.3.1 friend class ActiveMQSessionExecutor [friend]

The documentation for this class was generated from the following file:

Removes all messages in the Dispatch Channel so that non are delivered.
- virtual bool **hasUnconsumedMessages** () const
- virtual void **wakeup** ()
wakeup this executor and dispatch any pending messages.
- virtual void **start** ()
Starts the dispatching.
- virtual void **stop** ()
Stops dispatching.
- virtual void **close** ()
Terminates the dispatching thread.
- virtual bool **isRunning** () const
- virtual bool **isEmpty** ()
- virtual void **clear** ()
Removes all queued messages and destroys them.
- virtual bool **iterate** ()
*Iterates on the **MessageDispatchChannel** (p. 2224) sending all pending messages to the Consumers they are destined for.*
- std::vector< **Pointer**< **MessageDispatch** > > **getUnconsumedMessages** ()

6.63.1 Detailed Description

Delegate dispatcher for a single session. Contains a thread to provide for asynchronous dispatching.

6.63.2 Constructor & Destructor Documentation

6.63.2.1 `activemq::core::ActiveMQSessionExecutor::ActiveMQSessionExecutor (ActiveMQSession * session)`

Creates an un-started executor for the given session.

6.63.2.2 `virtual activemq::core::ActiveMQSessionExecutor::~~ActiveMQSessionExecutor () [virtual]`

Calls `stop()` (p. 463) then `clear()` (p. 461).

6.63.3 Member Function Documentation

6.63.3.1 `virtual void activemq::core::ActiveMQSessionExecutor::clear () [inline, virtual]`

Removes all queued messages and destroys them.

6.63.3.2 `virtual void ac- tivemq::core::ActiveMQSessionExecutor::clearMessagesInProgress () [inline, virtual]`

Removes all messages in the Dispatch Channel so that non are delivered.

6.63.3.3 `virtual void activemq::core::ActiveMQSessionExecutor::close () [inline, virtual]`

Terminates the dispatching thread. Once this is called, the executor is no longer usable.

6.63.3.4 `virtual void activemq::core::ActiveMQSessionExecutor::execute (const Pointer< MessageDispatch > & data) [virtual]`

Executes the dispatch. Adds the given data to the end of the queue.

Parameters:

data - the data to be dispatched.

6.63.3.5 `virtual void activemq::core::ActiveMQSessionExecutor::executeFirst (const Pointer< MessageDispatch > & data) [virtual]`

Executes the dispatch. Adds the given data to the beginning of the queue.

Parameters:

data - the data to be dispatched.

6.63.3.6 `std::vector< Pointer<MessageDispatch> > activemq::core::ActiveMQSessionExecutor::getUnconsumedMessages ()`
[inline]

Returns:

a vector containing all the unconsumed messages, this clears the Message Dispatch Channel when called.

6.63.3.7 `virtual bool activemq::core::ActiveMQSessionExecutor::hasUnconsumedMessages ()`
`const` [inline, virtual]

Returns:

true if there are any pending messages in the dispatch channel.

6.63.3.8 `virtual bool activemq::core::ActiveMQSessionExecutor::isEmpty ()`
[inline, virtual]

Returns:

true if there are no messages in the Dispatch Channel.

6.63.3.9 `virtual bool activemq::core::ActiveMQSessionExecutor::isRunning ()` `const`
[inline, virtual]

Returns:

true indicates if the executor is started

6.63.3.10 `virtual bool activemq::core::ActiveMQSessionExecutor::iterate ()`
[virtual]

Iterates on the **MessageDispatchChannel** (p. 2224) sending all pending messages to the Consumers they are destined for.

Returns:

false if there are no more messages to dispatch.

Implements **activemq::threads::Task** (p. 3148).

6.63.3.11 `virtual void activemq::core::ActiveMQSessionExecutor::start ()`
[virtual]

Starts the dispatching.

6.63.3.12 virtual void activemq::core::ActiveMQSessionExecutor::stop () [virtual]

Stops dispatching.

6.63.3.13 virtual void activemq::core::ActiveMQSessionExecutor::wakeup () [virtual]

wakeup this executor and dispatch any pending messages.

The documentation for this class was generated from the following file:

- src/main/activemq/core/**ActiveMQSessionExecutor.h**

6.64 activemq::commands::ActiveMQStreamMessage Class Reference

#include <src/main/activemq/commands/ActiveMQStreamMessage.h> Inheritance diagram for activemq::commands::ActiveMQStreamMessage:

Public Member Functions

- **ActiveMQStreamMessage** ()
- virtual **~ActiveMQStreamMessage** ()
- virtual unsigned char **getDataStructureType** () const
Get the unique identifier that this object and its own Marshaler share.
- virtual **ActiveMQStreamMessage * cloneDataStructure** () const
Clone this object and return a new instance that the caller now owns, this will be an exact copy of this one.
- virtual void **copyDataStructure** (const **DataStructure** *src)
Copy the contents of the passed object into this objects members, overwriting any existing data.
- virtual std::string **toString** () const
*Returns a string containing the information for this **DataStructure** (p. 1461) such as its type and value of its elements.*
- virtual bool **equals** (const **DataStructure** *value) const
*Compares the **DataStructure** (p. 1461) passed in to this one, and returns if they are equivalent.*
- virtual void **onSend** ()
Store the Data that was written to the stream before a send.
- virtual **cms::StreamMessage * clone** () const
Clone this message exactly, returns a new instance that the caller is required to delete.
- virtual void **clearBody** () throw (cms::CMSException)
Clears out the body of the message.
- virtual void **reset** () throw (cms::CMSException)
Puts the message body in read-only mode and repositions the stream of bytes to the beginning.
- virtual bool **readBoolean** () const throw (cms::MessageEOFException, cms::MessageFormatException, cms::MessageNotReadableException, cms::CMSException)
Reads a Boolean from the Stream message stream.
- virtual void **writeBoolean** (bool value) throw (cms::MessageNotWriteableException, cms::CMSException)
Writes a boolean to the Stream message stream as a 1-byte value.

- virtual unsigned char **readByte** () const throw (cms::MessageEOFException, cms::MessageFormatException, cms::MessageNotReadableException, cms::CMSEException)
Reads a Byte from the Stream message stream.
- virtual void **writeByte** (unsigned char value) throw (cms::MessageNotWriteableException, cms::CMSEException)
Writes a byte to the Stream message stream as a 1-byte value.
- virtual std::size_t **readBytes** (std::vector< unsigned char > &value) const throw (cms::MessageEOFException, cms::MessageFormatException, cms::MessageNotReadableException, cms::CMSEException)
Reads a byte array from the Stream message stream.
- virtual void **writeBytes** (const std::vector< unsigned char > &value) throw (cms::MessageNotWriteableException, cms::CMSEException)
Writes a byte array to the Stream message stream using the vector size as the number of bytes to write.
- virtual std::size_t **readBytes** (unsigned char *buffer, std::size_t length) const throw (cms::MessageEOFException, cms::MessageFormatException, cms::MessageNotReadableException, cms::CMSEException)
Reads a portion of the Stream message stream.
- virtual void **writeBytes** (const unsigned char *value, std::size_t offset, std::size_t length) throw (cms::MessageNotWriteableException, cms::CMSEException)
Writes a portion of a byte array to the Stream message stream.
- virtual char **readChar** () const throw (cms::MessageEOFException, cms::MessageFormatException, cms::MessageNotReadableException, cms::CMSEException)
Reads a Char from the Stream message stream.
- virtual void **writeChar** (char value) throw (cms::MessageNotWriteableException, cms::CMSEException)
Writes a char to the Stream message stream as a 1-byte value.
- virtual float **readFloat** () const throw (cms::MessageEOFException, cms::MessageFormatException, cms::MessageNotReadableException, cms::CMSEException)
Reads a 32 bit float from the Stream message stream.
- virtual void **writeFloat** (float value) throw (cms::MessageNotWriteableException, cms::CMSEException)
Writes a float to the Stream message stream as a 4 byte value.
- virtual double **readDouble** () const throw (cms::MessageEOFException, cms::MessageFormatException, cms::MessageNotReadableException, cms::CMSEException)
Reads a 64 bit double from the Stream message stream.

- virtual void **writeDouble** (double value) throw (cms::MessageNotWriteableException, cms::CMSEException)

Writes a double to the Stream message stream as a 8 byte value.

- virtual short **readShort** () const throw (cms::MessageEOFException, cms::MessageFormatException, cms::MessageNotReadableException, cms::CMSEException)

Reads a 16 bit signed short from the Stream message stream.

- virtual void **writeShort** (short value) throw (cms::MessageNotWriteableException, cms::CMSEException)

Writes a signed short to the Stream message stream as a 2 byte value.

- virtual unsigned short **readUnsignedShort** () const throw (cms::MessageEOFException, cms::MessageFormatException, cms::MessageNotReadableException, cms::CMSEException)

Reads a 16 bit unsigned short from the Stream message stream.

- virtual void **writeUnsignedShort** (unsigned short value) throw (cms::MessageNotWriteableException, cms::CMSEException)

Writes a unsigned short to the Stream message stream as a 2 byte value.

- virtual int **readInt** () const throw (cms::MessageEOFException, cms::MessageFormatException, cms::MessageNotReadableException, cms::CMSEException)

Reads a 32 bit signed integer from the Stream message stream.

- virtual void **writeInt** (int value) throw (cms::MessageNotWriteableException, cms::CMSEException)

Writes a signed int to the Stream message stream as a 4 byte value.

- virtual long long **readLong** () const throw (cms::MessageEOFException, cms::MessageFormatException, cms::MessageNotReadableException, cms::CMSEException)

Reads a 64 bit long from the Stream message stream.

- virtual void **writeLong** (long long value) throw (cms::MessageNotWriteableException, cms::CMSEException)

Writes a long long to the Stream message stream as a 8 byte value.

- virtual std::string **readString** () const throw (cms::MessageEOFException, cms::MessageFormatException, cms::MessageNotReadableException, cms::CMSEException)

Reads an ASCII String from the Stream message stream.

- virtual void **writeString** (const std::string &value) throw (cms::MessageNotWriteableException, cms::CMSEException)

Writes an ASCII String to the Stream message stream.

Static Public Attributes

- static const unsigned char `ID_ACTIVEMQSTREAMMESSAGE` = 27

6.64.1 Constructor & Destructor Documentation

6.64.1.1 `activemq::commands::ActiveMQStreamMessage::ActiveMQStreamMessage()`

6.64.1.2 `virtual activemq::commands::ActiveMQStreamMessage::~~ActiveMQStreamMessage()` [virtual]

6.64.2 Member Function Documentation

6.64.2.1 `virtual void activemq::commands::ActiveMQStreamMessage::clearBody () throw (cms::CMSException)` [virtual]

Clears out the body of the message. This does not clear the headers or properties.

Reimplemented from `activemq::commands::ActiveMQMessageTemplate< cms::StreamMessage >` (p. 368).

6.64.2.2 `virtual cms::StreamMessage* activemq::commands::ActiveMQStreamMessage::clone () const` [inline, virtual]

Clone this message exactly, returns a new instance that the caller is required to delete.

Returns:

new copy of this message

Implements `cms::Message` (p. 2168).

6.64.2.3 `virtual ActiveMQStreamMessage* activemq::commands::ActiveMQStreamMessage::cloneDataStructure () const` [virtual]

Clone this object and return a new instance that the caller now owns, this will be an exact copy of this one.

Returns:

new copy of this object.

Reimplemented from `activemq::commands::Message` (p. 2149).

6.64.2.4 `virtual void activemq::commands::ActiveMQStreamMessage::copyDataStructure (const DataStructure * src)` [virtual]

Copy the contents of the passed object into this objects members, overwriting any existing data.

Returns:

src - Source Object

Reimplemented from `activemq::commands::Message` (p. 2150).

6.64.2.5 `virtual bool activemq::commands::ActiveMQStreamMessage::equals (const DataStructure * value) const [virtual]`

Compares the `DataStructure` (p. 1461) passed in to this one, and returns if they are equivalent. Equivalent here means that they are of the same type, and that each element of the objects are the same.

Returns:

true if `DataStructure`'s are Equal.

Reimplemented from `activemq::commands::ActiveMQMessageTemplate<cms::StreamMessage>` (p. 369).

6.64.2.6 `virtual unsigned char activemq::commands::ActiveMQStreamMessage::getDataStructureType () const [virtual]`

Get the unique identifier that this object and its own Marshaler share.

Returns:

new `DataStructure` (p. 1461) type copy.

Reimplemented from `activemq::commands::Message` (p. 2152).

6.64.2.7 `virtual void activemq::commands::ActiveMQStreamMessage::onSend () [virtual]`

Store the Data that was written to the stream before a send.

Reimplemented from `activemq::commands::ActiveMQMessageTemplate<cms::StreamMessage>` (p. 376).

6.64.2.8 `virtual bool activemq::commands::ActiveMQStreamMessage::readBoolean () const throw (cms::MessageEOFException, cms::MessageFormatException, cms::MessageNotReadableException, cms::CMSEException) [virtual]`

Reads a Boolean from the Stream message stream.

Returns:

boolean value from stream

Exceptions:

CMSEException - if the CMS provider fails to read the message due to some internal error.

MessageEOFException - if unexpected end of message stream has been reached.

MessageFormatException - if this type conversion is invalid.

MessageNotReadableException - if the message is in write-only mode.

Implements `cms::StreamMessage` (p. 3084).

6.64.2.9 `virtual unsigned char activemq::commands::ActiveMQStreamMessage::readByte () const throw (cms::MessageEOFException, cms::MessageFormatException, cms::MessageNotReadableException, cms::CMSException) [virtual]`

Reads a Byte from the Stream message stream.

Returns:

unsigned char value from stream

Exceptions:

CMSException - if the CMS provider fails to read the message due to some internal error.

MessageEOFException - if unexpected end of message stream has been reached.

MessageFormatException - if this type conversion is invalid.

MessageNotReadableException - if the message is in write-only mode.

Implements `cms::StreamMessage` (p. 3084).

6.64.2.10 `virtual std::size_t activemq::commands::ActiveMQStreamMessage::readBytes (unsigned char * buffer, std::size_t length) const throw (cms::MessageEOFException, cms::MessageFormatException, cms::MessageNotReadableException, cms::CMSException) [virtual]`

Reads a portion of the Stream message stream. If the length of array value is less than the number of bytes remaining to be read from the stream, the array should be filled. A subsequent call reads the next increment, and so on.

If the number of bytes remaining in the stream is less than the length of array value, the bytes should be read into the array. The return value of the total number of bytes read will be less than the length of the array, indicating that there are no more bytes left to be read from the stream. The next read of the stream returns -1.

If length is negative, or length is greater than the length of the array value, then an `CMSException` is thrown. No bytes will be read from the stream for this exception case.

Parameters:

buffer the buffer into which the data is read

length the number of bytes to read; must be less than or equal to `value.length`

Returns:

the total number of bytes read into the buffer, or -1 if there is no more data because the end of the stream has been reached

Exceptions:

CMSEException - if the CMS provider fails to read the message due to some internal error.

MessageEOFException - if unexpected end of message stream has been reached.

MessageFormatException - if this type conversion is invalid.

MessageNotReadableException - if the message is in write-only mode.

Implements `cms::StreamMessage` (p. 3085).

6.64.2.11 `virtual std::size_t activemq::commands::ActiveMQStreamMessage::readBytes (std::vector< unsigned char > & value) const throw (cms::MessageEOFException, cms::MessageFormatException, cms::MessageNotReadableException, cms::CMSEException)` [virtual]

Reads a byte array from the Stream message stream. If the length of vector value is less than the number of bytes remaining to be read from the stream, the vector should be filled. A subsequent call reads the next increment, and so on.

If the number of bytes remaining in the stream is less than the length of vector value, the bytes should be read into the vector. The return value of the total number of bytes read will be less than the length of the vector, indicating that there are no more bytes left to be read from the stream. The next read of the stream returns -1.

Parameters:

value buffer to place data in

Returns:

the total number of bytes read into the buffer, or -1 if there is no more data because the end of the stream has been reached

Exceptions:

CMSEException - if the CMS provider fails to read the message due to some internal error.

MessageEOFException - if unexpected end of message stream has been reached.

MessageFormatException - if this type conversion is invalid.

MessageNotReadableException - if the message is in write-only mode.

Implements `cms::StreamMessage` (p. 3085).

6.64.2.12 `virtual char activemq::commands::ActiveMQStreamMessage::readChar () const throw (cms::MessageEOFException, cms::MessageFormatException, cms::MessageNotReadableException, cms::CMSEException)` [virtual]

Reads a Char from the Stream message stream.

Returns:

char value from stream

Exceptions:

CMSException - if the CMS provider fails to read the message due to some internal error.

MessageEOFException - if unexpected end of message stream has been reached.

MessageFormatException - if this type conversion is invalid.

MessageNotReadableException - if the message is in write-only mode.

Implements `cms::StreamMessage` (p. 3086).

6.64.2.13 virtual double `activemq::commands::ActiveMQStreamMessage::readDouble`
 () const throw (`cms::MessageEOFException`,
`cms::MessageFormatException`, `cms::MessageNotReadableException`,
`cms::CMSException`) [virtual]

Reads a 64 bit double from the Stream message stream.

Returns:

double value from stream

Exceptions:

CMSException - if the CMS provider fails to read the message due to some internal error.

MessageEOFException - if unexpected end of message stream has been reached.

MessageFormatException - if this type conversion is invalid.

MessageNotReadableException - if the message is in write-only mode.

Implements `cms::StreamMessage` (p. 3086).

6.64.2.14 virtual float `activemq::commands::ActiveMQStreamMessage::readFloat`
 () const throw (`cms::MessageEOFException`,
`cms::MessageFormatException`, `cms::MessageNotReadableException`,
`cms::CMSException`) [virtual]

Reads a 32 bit float from the Stream message stream.

Returns:

double value from stream

Exceptions:

CMSException - if the CMS provider fails to read the message due to some internal error.

MessageEOFException - if unexpected end of message stream has been reached.

MessageFormatException - if this type conversion is invalid.

MessageNotReadableException - if the message is in write-only mode.

Implements `cms::StreamMessage` (p. 3087).

6.64.2.15 `virtual int activemq::commands::ActiveMQStreamMessage::readInt
() const throw (cms::MessageEOFException,
cms::MessageFormatException, cms::MessageNotReadableException,
cms::CMSException) [virtual]`

Reads a 32 bit signed integer from the Stream message stream.

Returns:

int value from stream

Exceptions:

CMSException - if the CMS provider fails to read the message due to some internal error.

MessageEOFException - if unexpected end of message stream has been reached.

MessageFormatException - if this type conversion is invalid.

MessageNotReadableException - if the message is in write-only mode.

Implements `cms::StreamMessage` (p. 3087).

6.64.2.16 `virtual long long ac-
tivismq::commands::ActiveMQStreamMessage::readLong
() const throw (cms::MessageEOFException,
cms::MessageFormatException, cms::MessageNotReadableException,
cms::CMSException) [virtual]`

Reads a 64 bit long from the Stream message stream.

Returns:

long long value from stream

Exceptions:

CMSException - if the CMS provider fails to read the message due to some internal error.

MessageEOFException - if unexpected end of message stream has been reached.

MessageFormatException - if this type conversion is invalid.

MessageNotReadableException - if the message is in write-only mode.

Implements `cms::StreamMessage` (p. 3087).

6.64.2.17 `virtual short activemq::commands::ActiveMQStreamMessage::readShort
() const throw (cms::MessageEOFException,
cms::MessageFormatException, cms::MessageNotReadableException,
cms::CMSException) [virtual]`

Reads a 16 bit signed short from the Stream message stream.

Returns:

short value from stream

Exceptions:

CMSException - if the CMS provider fails to read the message due to some internal error.

MessageEOFException - if unexpected end of message stream has been reached.

MessageFormatException - if this type conversion is invalid.

MessageNotReadableException - if the message is in write-only mode.

Implements **cms::StreamMessage** (p. 3088).

6.64.2.18 `virtual std::string activemq::commands::ActiveMQStreamMessage::readString
() const throw (cms::MessageEOFException,
cms::MessageFormatException, cms::MessageNotReadableException,
cms::CMSException) [virtual]`

Reads an ASCII String from the Stream message stream.

Returns:

String from stream

Exceptions:

CMSException - if the CMS provider fails to read the message due to some internal error.

MessageEOFException - if unexpected end of message stream has been reached.

MessageFormatException - if this type conversion is invalid.

MessageNotReadableException - if the message is in write-only mode.

Implements **cms::StreamMessage** (p. 3088).

6.64.2.19 `virtual unsigned short activemq::commands::ActiveMQStreamMessage::readUnsignedShort
() const throw (cms::MessageEOFException,
cms::MessageFormatException, cms::MessageNotReadableException,
cms::CMSException) [virtual]`

Reads a 16 bit unsigned short from the Stream message stream.

Returns:

unsigned short value from stream

Exceptions:

CMSException - if the CMS provider fails to read the message due to some internal error.

MessageEOFException - if unexpected end of message stream has been reached.

MessageFormatException - if this type conversion is invalid.

MessageNotReadableException - if the message is in write-only mode.

Implements **cms::StreamMessage** (p. 3089).

6.64.2.20 virtual void activemq::commands::ActiveMQStreamMessage::reset ()
throw (cms::CMSException) [virtual]

Puts the message body in read-only mode and repositions the stream of bytes to the beginning.

Exceptions:

CMSException

6.64.2.21 virtual std::string activemq::commands::ActiveMQStreamMessage::toString ()
const [virtual]

Returns a string containing the information for this **DataStructure** (p. 1461) such as its type and value of its elements.

Returns:

formatted string useful for debugging.

Reimplemented from **activemq::commands::Message** (p. 2159).

6.64.2.22 virtual void activemq::commands::ActiveMQStreamMessage::writeBoolean (bool *value*)
throw (cms::MessageNotWriteableException, cms::CMSException)
[virtual]

Writes a boolean to the Stream message stream as a 1-byte value. The value true is written as the value (byte)1; the value false is written as the value (byte)0.

Parameters:

value boolean to write to the stream

Exceptions:

CMSException - if the CMS provider fails to write the message due to some internal error.

MessageNotWriteableException - if the message is in read-only mode.

Implements **cms::StreamMessage** (p. 3089).

6.64.2.23 virtual void activemq::commands::ActiveMQStreamMessage::writeByte
(unsigned char *value*) throw (cms::MessageNotWriteableException,
cms::CMSException) [virtual]

Writes a byte to the Stream message stream as a 1-byte value.

Parameters:

value byte to write to the stream

Exceptions:

CMSException - if the CMS provider fails to write the message due to some internal error.

MessageNotWriteableException - if the message is in read-only mode.

Implements `cms::StreamMessage` (p. 3089).

6.64.2.24 `virtual void activemq::commands::ActiveMQStreamMessage::writeBytes (const unsigned char * value, std::size_t offset, std::size_t length) throw (cms::MessageNotWriteableException, cms::CMSException) [virtual]`

Writes a portion of a byte array to the Stream message stream. size as the number of bytes to write.

Parameters:

value bytes to write to the stream

offset the initial offset within the byte array

length the number of bytes to use

Exceptions:

CMSException - if the CMS provider fails to write the message due to some internal error.

MessageNotWriteableException - if the message is in read-only mode.

Implements `cms::StreamMessage` (p. 3090).

6.64.2.25 `virtual void activemq::commands::ActiveMQStreamMessage::writeBytes (const std::vector< unsigned char > & value) throw (cms::MessageNotWriteableException, cms::CMSException) [virtual]`

Writes a byte array to the Stream message stream using the vector size as the number of bytes to write.

Parameters:

value bytes to write to the stream

Exceptions:

CMSException - if the CMS provider fails to write the message due to some internal error.

MessageNotWriteableException - if the message is in read-only mode.

Implements `cms::StreamMessage` (p. 3090).

6.64.2.26 `virtual void activemq::commands::ActiveMQStreamMessage::writeChar (char value) throw (cms::MessageNotWriteableException, cms::CMSException) [virtual]`

Writes a char to the Stream message stream as a 1-byte value.

Parameters:

value char to write to the stream

Exceptions:

CMSEException - if the CMS provider fails to write the message due to some internal error.

MessageNotWriteableException - if the message is in read-only mode.

Implements **cms::StreamMessage** (p. 3090).

6.64.2.27 virtual void activemq::commands::ActiveMQStreamMessage::writeDouble
(double *value*) throw (cms::MessageNotWriteableException,
cms::CMSEException) [virtual]

Writes a double to the Stream message stream as a 8 byte value.

Parameters:

value double to write to the stream

Exceptions:

CMSEException - if the CMS provider fails to write the message due to some internal error.

MessageNotWriteableException - if the message is in read-only mode.

Implements **cms::StreamMessage** (p. 3091).

6.64.2.28 virtual void activemq::commands::ActiveMQStreamMessage::writeFloat
(float *value*) throw (cms::MessageNotWriteableException,
cms::CMSEException) [virtual]

Writes a float to the Stream message stream as a 4 byte value.

Parameters:

value float to write to the stream

Exceptions:

CMSEException - if the CMS provider fails to write the message due to some internal error.

MessageNotWriteableException - if the message is in read-only mode.

Implements **cms::StreamMessage** (p. 3091).

6.64.2.29 virtual void activemq::commands::ActiveMQStreamMessage::writeInt
(int *value*) throw (cms::MessageNotWriteableException,
cms::CMSEException) [virtual]

Writes a signed int to the Stream message stream as a 4 byte value.

Parameters:

value signed int to write to the stream

Exceptions:

CMSEException - if the CMS provider fails to write the message due to some internal error.

MessageNotWriteableException - if the message is in read-only mode.

Implements **cms::StreamMessage** (p. 3091).

6.64.2.30 virtual void activemq::commands::ActiveMQStreamMessage::writeLong
(long long *value*) throw (cms::MessageNotWriteableException,
cms::CMSException) [virtual]

Writes a long long to the Stream message stream as a 8 byte value.

Parameters:

value signed long long to write to the stream

Exceptions:

CMSException - if the CMS provider fails to write the message due to some internal error.

MessageNotWriteableException - if the message is in read-only mode.

Implements cms::StreamMessage (p. 3092).

6.64.2.31 virtual void activemq::commands::ActiveMQStreamMessage::writeShort
(short *value*) throw (cms::MessageNotWriteableException,
cms::CMSException) [virtual]

Writes a signed short to the Stream message stream as a 2 byte value.

Parameters:

value signed short to write to the stream

Exceptions:

CMSException - if the CMS provider fails to write the message due to some internal error.

MessageNotWriteableException - if the message is in read-only mode.

Implements cms::StreamMessage (p. 3092).

6.64.2.32 virtual void activemq::commands::ActiveMQStreamMessage::writeString
(const std::string & *value*) throw (cms::MessageNotWriteableException,
cms::CMSException) [virtual]

Writes an ASCII String to the Stream message stream.

Parameters:

value String to write to the stream

Exceptions:

CMSException - if the CMS provider fails to write the message due to some internal error.

MessageNotWriteableException - if the message is in read-only mode.

Implements cms::StreamMessage (p. 3092).

6.64.2.33 `virtual void activemq::commands::ActiveMQStreamMessage::writeUnsignedShort (unsigned short value) throw (cms::MessageNotWriteableException, cms::CMSException) [virtual]`

Writes a unsigned short to the Stream message stream as a 2 byte value.

Parameters:

value unsigned short to write to the stream

Exceptions:

CMSException - if the CMS provider fails to write the message due to some internal error.

MessageNotWriteableException - if the message is in read-only mode.

Implements `cms::StreamMessage` (p. 3093).

6.64.3 Field Documentation

6.64.3.1 `const unsigned char activemq::commands::ActiveMQStreamMessage::ID_ - ACTIVEMQSTREAMMESSAGE = 27 [static]`

The documentation for this class was generated from the following file:

- `src/main/activemq/commands/ActiveMQStreamMessage.h`

Class Reference

Marshaling code for Open Wire Format for **ActiveMQStreamMessageMarshaller** (p. 479).

```
#include <src/main/activemq/wireformat/openwire/marshal/v3/ActiveMQStreamMessageMarshaller.h>
Inheritance diagram for activemq:wireformat::openwire::marshal::v3::ActiveMQStreamMessageMarshaller:
```

Public Member Functions

- **ActiveMQStreamMessageMarshaller** ()
- virtual **~ActiveMQStreamMessageMarshaller** ()
- virtual **commands::DataStructure * createObject** () const
Creates a new instance of this marshalable type.
- virtual unsigned char **getDataStructureType** () const
Get the Data Structure Type that identifies this Marshaller.
- virtual void **tightUnmarshal** (**OpenWireFormat *wireFormat**, **commands::DataStructure *dataStructure**, **decaf::io::DataInputStream *dataIn**, **utils::BooleanStream *bs**) throw (**decaf::io::IOException**)
Un-marshal an object instance from the data input stream.
- virtual int **tightMarshal** (**OpenWireFormat *wireFormat**, **commands::DataStructure *dataStructure**, **utils::BooleanStream *bs**) throw (**decaf::io::IOException**)
Write the booleans that this object uses to a BooleanStream.
- virtual void **tightMarshal2** (**OpenWireFormat *wireFormat**, **commands::DataStructure *dataStructure**, **decaf::io::DataOutputStream *dataOut**, **utils::BooleanStream *bs**) throw (**decaf::io::IOException**)
Write a object instance to data output stream.
- virtual void **looseUnmarshal** (**OpenWireFormat *wireFormat**, **commands::DataStructure *dataStructure**, **decaf::io::DataInputStream *dataIn**) throw (**decaf::io::IOException**)
Un-marshal an object instance from the data input stream.
- virtual void **looseMarshal** (**OpenWireFormat *wireFormat**, **commands::DataStructure *dataStructure**, **decaf::io::DataOutputStream *dataOut**) throw (**decaf::io::IOException**)
Write a object instance to data output stream.

6.65.1 Detailed Description

Marshaling code for Open Wire Format for **ActiveMQStreamMessageMarshaller** (p. 479).

NOTE!: This file is auto generated - do not modify! if you need to make a change, please see the Java Classes in the activemq-openwire-generator module

6.65.2 Constructor & Destructor Documentation

6.65.2.1 `activemq::wireformat::openwire::marshal::v3::ActiveMQStreamMessageMarshaller::ActiveMQStreamMessageMarshaller()` [inline]

6.65.2.2 `virtual activemq::wireformat::openwire::marshal::v3::ActiveMQStreamMessageMarshaller::~ActiveMQStreamMessageMarshaller()` [inline, virtual]

6.65.3 Member Function Documentation

6.65.3.1 `virtual commands::DataStructure* activemq::wireformat::openwire::marshal::v3::ActiveMQStreamMessageMarshaller::createObject() const` [virtual]

Creates a new instance of this marshalable type.

Returns:

new DataStructure object pointer caller owns it.

Implements `activemq::wireformat::openwire::marshal::DataStreamMarshaller` (p. 1419).

6.65.3.2 `virtual unsigned char activemq::wireformat::openwire::marshal::v3::ActiveMQStreamMessageMarshaller::getDataStructureType() const` [virtual]

Get the Data Structure Type that identifies this Marshaler.

Returns:

byte holding the data structure type value

Implements `activemq::wireformat::openwire::marshal::DataStreamMarshaller` (p. 1424).

6.65.3.3 `virtual void activemq::wireformat::openwire::marshal::v3::ActiveMQStreamMessageMarshaller::marshal(commands::DataStructure* dataStructure, decaf::io::DataOutputStream* dataOut) throw (decaf::io::IOException)` [virtual]

Write a object instance to data output stream.

Parameters:

wireFormat - describes the wire format of the broker

dataStructure - Object to be marshaled

dataOut - BinaryWriter that provides that data sink

Exceptions:

IOException if an error occurs during the marshal.

6.65

activemq::wireformat::openwire::marshal::v3::ActiveMQStreamMessageMarshaller

Class Reference

483

Reimplemented from **activemq::wireformat::openwire::marshal::v3::MessageMarshaller** (p. 2316).

6.65.3.4 virtual void ac-

```
ativemq::wireformat::openwire::marshal::v3::ActiveMQStreamMessageMarshaller::looseUnmarshal(
    OpenWireFormat * wireFormat, commands::DataStructure *
    dataStructure, decaf::io::DataInputStream * dataIn) throw (
    decaf::io::IOException ) [virtual]
```

Un-marshall an object instance from the data input stream.

Parameters:

wireFormat - describes the wire format of the broker

dataStructure - Object to be marshaled

dataIn - BinaryReader that provides that data source

Exceptions:

IOException if an error occurs during the unmarshal.

Reimplemented from **activemq::wireformat::openwire::marshal::v3::MessageMarshaller** (p. 2316).

6.65.3.5 virtual int ac-

```
ativemq::wireformat::openwire::marshal::v3::ActiveMQStreamMessageMarshaller::tightMarshal(
    OpenWireFormat * wireFormat, commands::DataStructure *
    dataStructure, utils::BooleanStream * bs) throw ( decaf::io::IOException )
[virtual]
```

Write the booleans that this object uses to a BooleanStream.

Parameters:

wireFormat - describes the wire format of the broker

dataStructure - Object to be marshaled

bs - BooleanStream stream used to pack bits from the wire.

Returns:

int value indicating the size of the marshaled object.

Exceptions:

IOException if an error occurs during the marshal.

Reimplemented from **activemq::wireformat::openwire::marshal::v3::MessageMarshaller** (p. 2317).

6.65.3.6 `virtual void activemq::wireformat::openwire::marshal::v3::ActiveMQStreamMessageMarshaller::tightMarshal(OpenWireFormat * wireFormat, commands::DataStructure * dataStructure, decaf::io::DataOutputStream * dataOut, utils::BooleanStream * bs) throw (decaf::io::IOException) [virtual]`

Write a object instance to data output stream.

Parameters:

wireFormat - describes the wire format of the broker
dataStructure - Object to be marshaled
dataOut - BinaryReader that provides that data sink
bs - BooleanStream stream used to pack bits from the wire.

Exceptions:

IOException if an error occurs during the marshal.

Reimplemented from `activemq::wireformat::openwire::marshal::v3::MessageMarshaller` (p. 2318).

6.65.3.7 `virtual void activemq::wireformat::openwire::marshal::v3::ActiveMQStreamMessageMarshaller::tightUnmarshal(OpenWireFormat * wireFormat, commands::DataStructure * dataStructure, decaf::io::DataInputStream * dataIn, utils::BooleanStream * bs) throw (decaf::io::IOException) [virtual]`

Un-marshal an object instance from the data input stream.

Parameters:

wireFormat - describes the wire format of the broker.
dataStructure - Object to be un-marshaled.
dataIn - BinaryReader that provides that data.
bs - BooleanStream stream used to unpack bits from the wire.

Exceptions:

IOException if an error occurs during the unmarshal.

Reimplemented from `activemq::wireformat::openwire::marshal::v3::MessageMarshaller` (p. 2318).

The documentation for this class was generated from the following file:

- `src/main/activemq/wireformat/openwire/marshal/v3/ActiveMQStreamMessageMarshaller.h`

Marshaling code for Open Wire Format for **ActiveMQStreamMessageMarshaller** (p. 483).

```
#include <src/main/activemq/wireformat/openwire/marshal/v1/ActiveMQStreamMessageMarshaller.h>
Inheritance diagram for activemq:wireformat::openwire::marshal::v1::ActiveMQStreamMessageMarshaller:
```

Public Member Functions

- **ActiveMQStreamMessageMarshaller** ()
- virtual **~ActiveMQStreamMessageMarshaller** ()

- virtual void **looseMarshal** (**OpenWireFormat *wireFormat**, **commands::DataStructure *dataStructure**, **decaf::io::DataOutputStream *dataOut**) throw (**decaf::io::IOException**)
Write a object instance to data output stream.

6.66.1 Detailed Description

Marshaling code for Open Wire Format for **ActiveMQStreamMessageMarshaller** (p. 483).

NOTE!: This file is auto generated - do not modify! if you need to make a change, please see the Java Classes in the activemq-openwire-generator module

6.66.2 Constructor & Destructor Documentation

6.66.2.1 `activemq::wireformat::openwire::marshal::v1::ActiveMQStreamMessageMarshaller::ActiveMQStreamMessageMarshaller()` [inline]

6.66.2.2 `virtual activemq::wireformat::openwire::marshal::v1::ActiveMQStreamMessageMarshaller::~ActiveMQStreamMessageMarshaller()` [inline, virtual]

6.66.3 Member Function Documentation

6.66.3.1 `virtual commands::DataStructure* activemq::wireformat::openwire::marshal::v1::ActiveMQStreamMessageMarshaller::createObject() const` [virtual]

Creates a new instance of this marshalable type.

Returns:

new DataStructure object pointer caller owns it.

Implements `activemq::wireformat::openwire::marshal::DataStreamMarshaller` (p. 1419).

6.66.3.2 `virtual unsigned char activemq::wireformat::openwire::marshal::v1::ActiveMQStreamMessageMarshaller::getDataStructureType() const` [virtual]

Get the Data Structure Type that identifies this Marshaler.

Returns:

byte holding the data structure type value

Implements `activemq::wireformat::openwire::marshal::DataStreamMarshaller` (p. 1424).

6.66.3.3 `virtual void activemq::wireformat::openwire::marshal::v1::ActiveMQStreamMessageMarshaller::marshal(commands::DataStructure* dataStructure, decaf::io::DataOutputStream* dataOut) throw (decaf::io::IOException)` [virtual]

Write a object instance to data output stream.

Parameters:

wireFormat - describes the wire format of the broker

dataStructure - Object to be marshaled

dataOut - BinaryWriter that provides that data sink

Exceptions:

IOException if an error occurs during the marshal.

6.66

activemq::wireformat::openwire::marshal::v1::ActiveMQStreamMessageMarshaller

Class Reference

487

Reimplemented from **activemq::wireformat::openwire::marshal::v1::MessageMarshaller** (p. 2326).

6.66.3.4 virtual void ac-

```
tivemq::wireformat::openwire::marshal::v1::ActiveMQStreamMessageMarshaller::looseUnmarshal(
    OpenWireFormat * wireFormat, commands::DataStructure *
    dataStructure, decaf::io::DataInputStream * dataIn) throw (
    decaf::io::IOException ) [virtual]
```

Un-marshall an object instance from the data input stream.

Parameters:

wireFormat - describes the wire format of the broker

dataStructure - Object to be marshaled

dataIn - BinaryReader that provides that data source

Exceptions:

IOException if an error occurs during the unmarshal.

Reimplemented from **activemq::wireformat::openwire::marshal::v1::MessageMarshaller** (p. 2326).

6.66.3.5 virtual int ac-

```
tivemq::wireformat::openwire::marshal::v1::ActiveMQStreamMessageMarshaller::tightMarshal(
    OpenWireFormat * wireFormat, commands::DataStructure *
    dataStructure, utils::BooleanStream * bs) throw ( decaf::io::IOException )
[virtual]
```

Write the booleans that this object uses to a BooleanStream.

Parameters:

wireFormat - describes the wire format of the broker

dataStructure - Object to be marshaled

bs - BooleanStream stream used to pack bits from the wire.

Returns:

int value indicating the size of the marshaled object.

Exceptions:

IOException if an error occurs during the marshal.

Reimplemented from **activemq::wireformat::openwire::marshal::v1::MessageMarshaller** (p. 2327).

6.66.3.6 `virtual void activemq::wireformat::openwire::marshal::v1::ActiveMQStreamMessageMarshaller::tightMarshal(OpenWireFormat * wireFormat, commands::DataStructure * dataStructure, decaf::io::DataOutputStream * dataOut, utils::BooleanStream * bs) throw (decaf::io::IOException) [virtual]`

Write a object instance to data output stream.

Parameters:

wireFormat - describes the wire format of the broker
dataStructure - Object to be marshaled
dataOut - BinaryReader that provides that data sink
bs - BooleanStream stream used to pack bits from the wire.

Exceptions:

IOException if an error occurs during the marshal.

Reimplemented from `activemq::wireformat::openwire::marshal::v1::MessageMarshaller` (p. 2328).

6.66.3.7 `virtual void activemq::wireformat::openwire::marshal::v1::ActiveMQStreamMessageMarshaller::tightUnmarshal(OpenWireFormat * wireFormat, commands::DataStructure * dataStructure, decaf::io::DataInputStream * dataIn, utils::BooleanStream * bs) throw (decaf::io::IOException) [virtual]`

Un-marshal an object instance from the data input stream.

Parameters:

wireFormat - describes the wire format of the broker.
dataStructure - Object to be un-marshaled.
dataIn - BinaryReader that provides that data.
bs - BooleanStream stream used to unpack bits from the wire.

Exceptions:

IOException if an error occurs during the unmarshal.

Reimplemented from `activemq::wireformat::openwire::marshal::v1::MessageMarshaller` (p. 2328).

The documentation for this class was generated from the following file:

- `src/main/activemq/wireformat/openwire/marshal/v1/ActiveMQStreamMessageMarshaller.h`

Class Reference

Marshaling code for Open Wire Format for **ActiveMQStreamMessageMarshaller** (p. 487).

```

Un-marshal an object instance from the data input stream.
- virtual void **looseMarshal** (**OpenWireFormat *wireFormat**, **commands::DataStructure *dataStructure**, **decaf::io::DataOutputStream *dataOut**) throw (**decaf::io::IOException**)
Write a object instance to data output stream.

6.67.1 Detailed Description

Marshaling code for Open Wire Format for **ActiveMQStreamMessageMarshaller** (p. 487).

NOTE!: This file is auto generated - do not modify! if you need to make a change, please see the Java Classes in the activemq-openwire-generator module

6.67.2 Constructor & Destructor Documentation

6.67.2.1 `activemq::wireformat::openwire::marshal::v4::ActiveMQStreamMessageMarshaller::ActiveMQStreamMessageMarshaller()` [inline]

6.67.2.2 `virtual activemq::wireformat::openwire::marshal::v4::ActiveMQStreamMessageMarshaller::~ActiveMQStreamMessageMarshaller()` [inline, virtual]

6.67.3 Member Function Documentation

6.67.3.1 `virtual commands::DataStructure* activemq::wireformat::openwire::marshal::v4::ActiveMQStreamMessageMarshaller::createObject() const` [virtual]

Creates a new instance of this marshalable type.

Returns:

new DataStructure object pointer caller owns it.

Implements `activemq::wireformat::openwire::marshal::DataStreamMarshaller` (p. 1419).

6.67.3.2 `virtual unsigned char activemq::wireformat::openwire::marshal::v4::ActiveMQStreamMessageMarshaller::getDataStructureType() const` [virtual]

Get the Data Structure Type that identifies this Marshaler.

Returns:

byte holding the data structure type value

Implements `activemq::wireformat::openwire::marshal::DataStreamMarshaller` (p. 1424).

6.67.3.3 `virtual void activemq::wireformat::openwire::marshal::v4::ActiveMQStreamMessageMarshaller::marshal(commands::DataStructure* dataStructure, decaf::io::DataOutputStream* dataOut) throw (decaf::io::IOException)` [virtual]

Write a object instance to data output stream.

Parameters:

wireFormat - describes the wire format of the broker

dataStructure - Object to be marshaled

dataOut - BinaryWriter that provides that data sink

Exceptions:

IOException if an error occurs during the marshal.

6.67

activemq::wireformat::openwire::marshal::v4::ActiveMQStreamMessageMarshaller

Class Reference

491

Reimplemented from **activemq::wireformat::openwire::marshal::v4::MessageMarshaller** (p. 2311).

6.67.3.4 virtual void ac-

```
ativemq::wireformat::openwire::marshal::v4::ActiveMQStreamMessageMarshaller::looseUnmarshal(
    OpenWireFormat * wireFormat, commands::DataStructure *
    dataStructure, decaf::io::DataInputStream * dataIn) throw (
    decaf::io::IOException ) [virtual]
```

Un-marshall an object instance from the data input stream.

Parameters:

wireFormat - describes the wire format of the broker

dataStructure - Object to be marshaled

dataIn - BinaryReader that provides that data source

Exceptions:

IOException if an error occurs during the unmarshal.

Reimplemented from **activemq::wireformat::openwire::marshal::v4::MessageMarshaller** (p. 2311).

6.67.3.5 virtual int ac-

```
ativemq::wireformat::openwire::marshal::v4::ActiveMQStreamMessageMarshaller::tightMarshal(
    OpenWireFormat * wireFormat, commands::DataStructure *
    dataStructure, utils::BooleanStream * bs) throw ( decaf::io::IOException )
[virtual]
```

Write the booleans that this object uses to a BooleanStream.

Parameters:

wireFormat - describes the wire format of the broker

dataStructure - Object to be marshaled

bs - BooleanStream stream used to pack bits from the wire.

Returns:

int value indicating the size of the marshaled object.

Exceptions:

IOException if an error occurs during the marshal.

Reimplemented from **activemq::wireformat::openwire::marshal::v4::MessageMarshaller** (p. 2312).

6.67.3.6 `virtual void activemq::wireformat::openwire::marshal::v4::ActiveMQStreamMessageMarshaller::tightMarshal(OpenWireFormat * wireFormat, commands::DataStructure * dataStructure, decaf::io::DataOutputStream * dataOut, utils::BooleanStream * bs) throw (decaf::io::IOException) [virtual]`

Write a object instance to data output stream.

Parameters:

wireFormat - describes the wire format of the broker
dataStructure - Object to be marshaled
dataOut - BinaryReader that provides that data sink
bs - BooleanStream stream used to pack bits from the wire.

Exceptions:

IOException if an error occurs during the marshal.

Reimplemented from `activemq::wireformat::openwire::marshal::v4::MessageMarshaller` (p. 2313).

6.67.3.7 `virtual void activemq::wireformat::openwire::marshal::v4::ActiveMQStreamMessageMarshaller::tightUnmarshal(OpenWireFormat * wireFormat, commands::DataStructure * dataStructure, decaf::io::DataInputStream * dataIn, utils::BooleanStream * bs) throw (decaf::io::IOException) [virtual]`

Un-marshal an object instance from the data input stream.

Parameters:

wireFormat - describes the wire format of the broker.
dataStructure - Object to be un-marshaled.
dataIn - BinaryReader that provides that data.
bs - BooleanStream stream used to unpack bits from the wire.

Exceptions:

IOException if an error occurs during the unmarshal.

Reimplemented from `activemq::wireformat::openwire::marshal::v4::MessageMarshaller` (p. 2313).

6.68.1 Detailed Description

Marshaling code for Open Wire Format for **ActiveMQStreamMessageMarshaller** (p. 491).

NOTE!: This file is auto generated - do not modify! if you need to make a change, please see the Java Classes in the activemq-openwire-generator module

6.68.2 Constructor & Destructor Documentation

6.68.2.1 `activemq::wireformat::openwire::marshal::v5::ActiveMQStreamMessageMarshaller::ActiveMQStreamMessageMarshaller()` [inline]

6.68.2.2 `virtual activemq::wireformat::openwire::marshal::v5::ActiveMQStreamMessageMarshaller::~ActiveMQStreamMessageMarshaller()` [inline, virtual]

6.68.3 Member Function Documentation

6.68.3.1 `virtual commands::DataStructure* activemq::wireformat::openwire::marshal::v5::ActiveMQStreamMessageMarshaller::createObject() const` [virtual]

Creates a new instance of this marshalable type.

Returns:

new DataStructure object pointer caller owns it.

Implements `activemq::wireformat::openwire::marshal::DataStreamMarshaller` (p. 1419).

6.68.3.2 `virtual unsigned char activemq::wireformat::openwire::marshal::v5::ActiveMQStreamMessageMarshaller::getDataStructureType() const` [virtual]

Get the Data Structure Type that identifies this Marshaler.

Returns:

byte holding the data structure type value

Implements `activemq::wireformat::openwire::marshal::DataStreamMarshaller` (p. 1424).

6.68.3.3 `virtual void activemq::wireformat::openwire::marshal::v5::ActiveMQStreamMessageMarshaller::marshal(commands::DataStructure* dataStructure, decaf::io::DataOutputStream* dataOut) throw (decaf::io::IOException)` [virtual]

Write a object instance to data output stream.

Parameters:

wireFormat - describes the wire format of the broker

dataStructure - Object to be marshaled

dataOut - BinaryWriter that provides that data sink

Exceptions:

IOException if an error occurs during the marshal.

6.68

activemq::wireformat::openwire::marshal::v5::ActiveMQStreamMessageMarshaller

Class Reference

495

Reimplemented from **activemq::wireformat::openwire::marshal::v5::MessageMarshaller** (p. 2321).

6.68.3.4 virtual void ac-

```
tivemq::wireformat::openwire::marshal::v5::ActiveMQStreamMessageMarshaller::looseUnmarshal(
    OpenWireFormat * wireFormat, commands::DataStructure *
    dataStructure, decaf::io::DataInputStream * dataIn) throw (
    decaf::io::IOException ) [virtual]
```

Un-marshall an object instance from the data input stream.

Parameters:

wireFormat - describes the wire format of the broker

dataStructure - Object to be marshaled

dataIn - BinaryReader that provides that data source

Exceptions:

IOException if an error occurs during the unmarshal.

Reimplemented from **activemq::wireformat::openwire::marshal::v5::MessageMarshaller** (p. 2321).

6.68.3.5 virtual int ac-

```
tivemq::wireformat::openwire::marshal::v5::ActiveMQStreamMessageMarshaller::tightMarshal(
    OpenWireFormat * wireFormat, commands::DataStructure *
    dataStructure, utils::BooleanStream * bs) throw ( decaf::io::IOException )
[virtual]
```

Write the booleans that this object uses to a BooleanStream.

Parameters:

wireFormat - describes the wire format of the broker

dataStructure - Object to be marshaled

bs - BooleanStream stream used to pack bits from the wire.

Returns:

int value indicating the size of the marshaled object.

Exceptions:

IOException if an error occurs during the marshal.

Reimplemented from **activemq::wireformat::openwire::marshal::v5::MessageMarshaller** (p. 2322).

6.68.3.6 `virtual void activemq::wireformat::openwire::marshal::v5::ActiveMQStreamMessageMarshaller::tightMarshal(OpenWireFormat * wireFormat, commands::DataStructure * dataStructure, decaf::io::DataOutputStream * dataOut, utils::BooleanStream * bs) throw (decaf::io::IOException) [virtual]`

Write a object instance to data output stream.

Parameters:

wireFormat - describes the wire format of the broker
dataStructure - Object to be marshaled
dataOut - BinaryReader that provides that data sink
bs - BooleanStream stream used to pack bits from the wire.

Exceptions:

IOException if an error occurs during the marshal.

Reimplemented from `activemq::wireformat::openwire::marshal::v5::MessageMarshaller` (p. 2323).

6.68.3.7 `virtual void activemq::wireformat::openwire::marshal::v5::ActiveMQStreamMessageMarshaller::tightUnmarshal(OpenWireFormat * wireFormat, commands::DataStructure * dataStructure, decaf::io::DataInputStream * dataIn, utils::BooleanStream * bs) throw (decaf::io::IOException) [virtual]`

Un-marshal an object instance from the data input stream.

Parameters:

wireFormat - describes the wire format of the broker.
dataStructure - Object to be un-marshaled.
dataIn - BinaryReader that provides that data.
bs - BooleanStream stream used to unpack bits from the wire.

Exceptions:

IOException if an error occurs during the unmarshal.

Reimplemented from `activemq::wireformat::openwire::marshal::v5::MessageMarshaller` (p. 2323).

6.69.1 Detailed Description

Marshaling code for Open Wire Format for **ActiveMQStreamMessageMarshaller** (p. 495).

NOTE!: This file is auto generated - do not modify! if you need to make a change, please see the Java Classes in the activemq-openwire-generator module

6.69.2 Constructor & Destructor Documentation

6.69.2.1 `activemq::wireformat::openwire::marshal::v2::ActiveMQStreamMessageMarshaller::ActiveMQStreamMessageMarshaller()` [inline]

6.69.2.2 `virtual activemq::wireformat::openwire::marshal::v2::ActiveMQStreamMessageMarshaller::~ActiveMQStreamMessageMarshaller()` [inline, virtual]

6.69.3 Member Function Documentation

6.69.3.1 `virtual commands::DataStructure* activemq::wireformat::openwire::marshal::v2::ActiveMQStreamMessageMarshaller::createObject() const` [virtual]

Creates a new instance of this marshalable type.

Returns:

new DataStructure object pointer caller owns it.

Implements `activemq::wireformat::openwire::marshal::DataStreamMarshaller` (p. 1419).

6.69.3.2 `virtual unsigned char activemq::wireformat::openwire::marshal::v2::ActiveMQStreamMessageMarshaller::getDataStructureType() const` [virtual]

Get the Data Structure Type that identifies this Marshaler.

Returns:

byte holding the data structure type value

Implements `activemq::wireformat::openwire::marshal::DataStreamMarshaller` (p. 1424).

6.69.3.3 `virtual void activemq::wireformat::openwire::marshal::v2::ActiveMQStreamMessageMarshaller::marshal(const OpenWireFormat * wireFormat, commands::DataStructure * dataStructure, decaf::io::DataOutputStream * dataOut) throw (decaf::io::IOException)` [virtual]

Write a object instance to data output stream.

Parameters:

wireFormat - describes the wire format of the broker

dataStructure - Object to be marshaled

dataOut - BinaryWriter that provides that data sink

Exceptions:

IOException if an error occurs during the marshal.

6.69

activemq::wireformat::openwire::marshal::v2::ActiveMQStreamMessageMarshaller

Class Reference

499

Reimplemented from **activemq::wireformat::openwire::marshal::v2::MessageMarshaller** (p. 2306).

6.69.3.4 virtual void ac-

```
tivemq::wireformat::openwire::marshal::v2::ActiveMQStreamMessageMarshaller::looseUnmarshal(
    OpenWireFormat * wireFormat, commands::DataStructure *
    dataStructure, decaf::io::DataInputStream * dataIn) throw (
    decaf::io::IOException ) [virtual]
```

Un-marshall an object instance from the data input stream.

Parameters:

wireFormat - describes the wire format of the broker

dataStructure - Object to be marshaled

dataIn - BinaryReader that provides that data source

Exceptions:

IOException if an error occurs during the unmarshal.

Reimplemented from **activemq::wireformat::openwire::marshal::v2::MessageMarshaller** (p. 2306).

6.69.3.5 virtual int ac-

```
tivemq::wireformat::openwire::marshal::v2::ActiveMQStreamMessageMarshaller::tightMarshal(
    OpenWireFormat * wireFormat, commands::DataStructure *
    dataStructure, utils::BooleanStream * bs) throw ( decaf::io::IOException )
[virtual]
```

Write the booleans that this object uses to a BooleanStream.

Parameters:

wireFormat - describes the wire format of the broker

dataStructure - Object to be marshaled

bs - BooleanStream stream used to pack bits from the wire.

Returns:

int value indicating the size of the marshaled object.

Exceptions:

IOException if an error occurs during the marshal.

Reimplemented from **activemq::wireformat::openwire::marshal::v2::MessageMarshaller** (p. 2307).

6.69.3.6 `virtual void activemq::wireformat::openwire::marshal::v2::ActiveMQStreamMessageMarshaller::tightMarshal(OpenWireFormat * wireFormat, commands::DataStructure * dataStructure, decaf::io::DataOutputStream * dataOut, utils::BooleanStream * bs) throw (decaf::io::IOException) [virtual]`

Write a object instance to data output stream.

Parameters:

wireFormat - describes the wire format of the broker
dataStructure - Object to be marshaled
dataOut - BinaryReader that provides that data sink
bs - BooleanStream stream used to pack bits from the wire.

Exceptions:

IOException if an error occurs during the marshal.

Reimplemented from `activemq::wireformat::openwire::marshal::v2::MessageMarshaller` (p. 2308).

6.69.3.7 `virtual void activemq::wireformat::openwire::marshal::v2::ActiveMQStreamMessageMarshaller::tightUnmarshal(OpenWireFormat * wireFormat, commands::DataStructure * dataStructure, decaf::io::DataInputStream * dataIn, utils::BooleanStream * bs) throw (decaf::io::IOException) [virtual]`

Un-marshal an object instance from the data input stream.

Parameters:

wireFormat - describes the wire format of the broker.
dataStructure - Object to be un-marshaled.
dataIn - BinaryReader that provides that data.
bs - BooleanStream stream used to unpack bits from the wire.

Exceptions:

IOException if an error occurs during the unmarshal.

Reimplemented from `activemq::wireformat::openwire::marshal::v2::MessageMarshaller` (p. 2308).

The documentation for this class was generated from the following file:

- `src/main/activemq/wireformat/openwire/marshal/v2/ActiveMQStreamMessageMarshaller.h`

6.70 activemq::commands::ActiveMQTempDestination Class Reference

#include <src/main/activemq/commands/ActiveMQTempDestination.h> Inheritance diagram for activemq::commands::ActiveMQTempDestination:

Public Member Functions

- **ActiveMQTempDestination** ()
- **ActiveMQTempDestination** (const std::string &name)
- virtual ~**ActiveMQTempDestination** ()
- virtual unsigned char **getDataStructureType** () const
*Get the **DataStructure** (p. 1461) Type as defined in CommandTypes.h.*
- virtual **ActiveMQTempDestination** * **cloneDataStructure** () const
Clone this object and return a new instance that the caller now owns, this will be an exact copy of this one.
- virtual void **copyDataStructure** (const **DataStructure** *src)
Copy the contents of the passed object into this objects members, overwriting any existing data.
- virtual std::string **toString** () const
*Returns a string containing the information for this **DataStructure** (p. 1461) such as its type and value of its elements.*
- virtual bool **equals** (const **DataStructure** *value) const
*Compares the **DataStructure** (p. 1461) passed in to this one, and returns if they are equivalent.*
- virtual void **close** () throw (cms::CMSException)
Closes down this Destination resulting in a call to dispose of the TempDestination resource at the Broker.
- void **setConnection** (core::ActiveMQConnection *connection)
Sets the Parent Connection that is notified when this destination is destroyed.

Static Public Attributes

- static const unsigned char **ID_ACTIVEMQTEMPDESTINATION** = 0

Protected Attributes

- core::ActiveMQConnection * **connection**
Connection that we call back on close to allow this resource to be cleaned up correctly at this end and at the Broker End.

6.70.1 Constructor & Destructor Documentation

- 6.70.1.1** `activemq::commands::ActiveMQTempDestination::ActiveMQTempDestination()`
- 6.70.1.2** `activemq::commands::ActiveMQTempDestination::ActiveMQTempDestination(const std::string & name)`
- 6.70.1.3** `virtual activemq::commands::ActiveMQTempDestination::~~ActiveMQTempDestination()` [virtual]

6.70.2 Member Function Documentation

- 6.70.2.1** `virtual ActiveMQTempDestination* activemq::commands::ActiveMQTempDestination::cloneDataStructure()` `const` [inline, virtual]

Clone this object and return a new instance that the caller now owns, this will be an exact copy of this one.

Returns:

new copy of this object.

Reimplemented from `activemq::commands::ActiveMQDestination` (p. 276).

Reimplemented in `activemq::commands::ActiveMQTempQueue` (p. 524), and `activemq::commands::ActiveMQTempTopic` (p. 549).

- 6.70.2.2** `virtual void activemq::commands::ActiveMQTempDestination::close()` `throw (cms::CMSException)` [virtual]

Closes down this Destination resulting in a call to dispose of the TempDestination resource at the Broker. This should only be called when the user is certain that they are finished with this destination. The TempDestination is not closed automatically on shutdown. throws `cms::CMSException` (p. 1031)

Implements `cms::Closeable` (p. 1021).

- 6.70.2.3** `virtual void activemq::commands::ActiveMQTempDestination::copyDataStructure(const DataStructure * src)` [inline, virtual]

Copy the contents of the passed object into this objects members, overwriting any existing data.

Returns:

src - Source Object

Reimplemented from `activemq::commands::ActiveMQDestination` (p. 277).

Reimplemented in `activemq::commands::ActiveMQTempQueue` (p. 525), and `activemq::commands::ActiveMQTempTopic` (p. 550).

References `activemq::commands::ActiveMQDestination::copyDataStructure()`.

**6.70.2.4 virtual bool activemq::commands::ActiveMQTempDestination::equals
(const DataStructure * *value*) const [inline, virtual]**

Compares the **DataStructure** (p. 1461) passed in to this one, and returns if they are equivalent. Equivalent here means that they are of the same type, and that each element of the objects are the same.

Returns:

true if DataStructure's are Equal.

Reimplemented from **activemq::commands::ActiveMQDestination** (p. 278).

Reimplemented in **activemq::commands::ActiveMQTempQueue** (p. 525), and **activemq::commands::ActiveMQTempTopic** (p. 550).

References **activemq::commands::ActiveMQDestination::equals()**.

**6.70.2.5 virtual unsigned char activemq::commands::ActiveMQTempDestination::getDataStructureType ()
const [virtual]**

Get the **DataStructure** (p. 1461) Type as defined in CommandTypes.h.

Returns:

The type of the data structure

Reimplemented from **activemq::commands::ActiveMQDestination** (p. 278).

Reimplemented in **activemq::commands::ActiveMQTempQueue** (p. 526), and **activemq::commands::ActiveMQTempTopic** (p. 551).

**6.70.2.6 void activemq::commands::ActiveMQTempDestination::setConnection
(core::ActiveMQConnection * *connection*) [inline]**

Sets the Parent Connection that is notified when this destination is destroyed.

Parameters:

connection - The parent connection.

**6.70.2.7 virtual std::string activemq::commands::ActiveMQTempDestination::toString ()
const [virtual]**

Returns a string containing the information for this **DataStructure** (p. 1461) such as its type and value of its elements.

Returns:

formatted string useful for debugging.

Reimplemented from **activemq::commands::ActiveMQDestination** (p. 282).

Reimplemented in **activemq::commands::ActiveMQTempQueue** (p. 526), and **activemq::commands::ActiveMQTempTopic** (p. 551).

6.70.3 Field Documentation

6.70.3.1 `core::ActiveMQConnection* activemq::commands::ActiveMQTempDestination::connection`
[protected]

Connection that we call back on close to allow this resource to be cleaned up correctly at this end and at the Broker End.

6.70.3.2 `const unsigned char activemq::commands::ActiveMQTempDestination::ID -`
`ACTIVEMQTEMPDESTINATION = 0` [static]

- virtual void **tightUnmarshal** (**OpenWireFormat** *wireFormat, **commands::DataStructure** *dataStructure, **decaf::io::DataInputStream** *dataIn, **utils::BooleanStream** *bs) throw (**decaf::io::IOException**)

Un-marshal an object instance from the data input stream.

- virtual int **tightMarshal1** (**OpenWireFormat** *wireFormat, **commands::DataStructure** *dataStructure, **utils::BooleanStream** *bs) throw (**decaf::io::IOException**)

Write the booleans that this object uses to a BooleanStream.

- virtual void **tightMarshal2** (**OpenWireFormat** *wireFormat, **commands::DataStructure** *dataStructure, **decaf::io::DataOutputStream** *dataOut, **utils::BooleanStream** *bs) throw (**decaf::io::IOException**)

Write a object instance to data output stream.

- virtual void **looseUnmarshal** (**OpenWireFormat** *wireFormat, **commands::DataStructure** *dataStructure, **decaf::io::DataInputStream** *dataIn) throw (**decaf::io::IOException**)

Un-marshal an object instance from the data input stream.

- virtual void **looseMarshal** (**OpenWireFormat** *wireFormat, **commands::DataStructure** *dataStructure, **decaf::io::DataOutputStream** *dataOut) throw (**decaf::io::IOException**)

Write a object instance to data output stream.

6.71.1 Detailed Description

Marshaling code for Open Wire Format for **ActiveMQTempDestinationMarshaller** (p. 503).

NOTE!: This file is auto generated - do not modify! if you need to make a change, please see the Java Classes in the activemq-openwire-generator module

6.71.2 Constructor & Destructor Documentation

6.71.2.1 `activemq::wireformat::openwire::marshal::v3::ActiveMQTempDestinationMarshaller::ActiveMQTempDestinationMarshaller()` [inline]

6.71.2.2 `virtual activemq::wireformat::openwire::marshal::v3::ActiveMQTempDestinationMarshaller::~ActiveMQTempDestinationMarshaller()` [inline, virtual]

6.71.3 Member Function Documentation

6.71.3.1 `virtual void activemq::wireformat::openwire::marshal::v3::ActiveMQTempDestinationMarshaller::marshal(const OpenWireFormat * wireFormat, commands::DataStructure * dataStructure, decaf::io::DataOutputStream * dataOut) throw (decaf::io::IOException)` [virtual]

Write a object instance to data output stream.

Parameters:

wireFormat - describes the wire format of the broker

dataStructure - Object to be marshaled

dataOut - BinaryWriter that provides that data sink

Exceptions:

IOException if an error occurs during the marshal.

Reimplemented from `activemq::wireformat::openwire::marshal::v3::ActiveMQDestinationMarshaller` (p. 286).

Reimplemented in `activemq::wireformat::openwire::marshal::v3::ActiveMQTempQueueMarshaller` (p. 529), and `activemq::wireformat::openwire::marshal::v3::ActiveMQTempTopicMarshaller` (p. 554).

6.71.3.2 `virtual void activemq::wireformat::openwire::marshal::v3::ActiveMQTempDestinationMarshaller::unmarshal(const OpenWireFormat * wireFormat, commands::DataStructure * dataStructure, decaf::io::DataInputStream * dataIn) throw (decaf::io::IOException)` [virtual]

Un-marshal an object instance from the data input stream.

Parameters:

wireFormat - describes the wire format of the broker

dataStructure - Object to be marshaled

dataIn - BinaryReader that provides that data source

Exceptions:

IOException if an error occurs during the unmarshal.

6.71

activemq::wireformat::openwire::marshal::v3::ActiveMQTempDestinationMarshaller

Class Reference

507

Reimplemented from **activemq::wireformat::openwire::marshal::v3::ActiveMQDestinationMarshaller** (p. 286).

Reimplemented in **activemq::wireformat::openwire::marshal::v3::ActiveMQTempQueueMarshaller** (p. 530), and **activemq::wireformat::openwire::marshal::v3::ActiveMQTempTopicMarshaller** (p. 555).

6.71.3.3 virtual int ac-
tivemq::wireformat::openwire::marshal::v3::ActiveMQTempDestinationMarshaller::tightMa
(OpenWireFormat * *wireFormat*, commands::DataStructure *
***dataStructure*, utils::BooleanStream * *bs*) throw (decaf::io::IOException)**
[virtual]

Write the booleans that this object uses to a BooleanStream.

Parameters:

wireFormat - describes the wire format of the broker

dataStructure - Object to be marshaled

bs - BooleanStream stream used to pack bits from the wire.

Returns:

int value indicating the size of the marshaled object.

Exceptions:

IOException if an error occurs during the marshal.

Reimplemented from **activemq::wireformat::openwire::marshal::v3::ActiveMQDestinationMarshaller** (p. 287).

Reimplemented in **activemq::wireformat::openwire::marshal::v3::ActiveMQTempQueueMarshaller** (p. 530), and **activemq::wireformat::openwire::marshal::v3::ActiveMQTempTopicMarshaller** (p. 555).

6.71.3.4 virtual void ac-
tivemq::wireformat::openwire::marshal::v3::ActiveMQTempDestinationMarshaller::tightMa
(OpenWireFormat * *wireFormat*, commands::DataStructure
*** *dataStructure*, decaf::io::DataOutputStream * *dataOut*,**
utils::BooleanStream * *bs*) throw (decaf::io::IOException) [virtual]

Write a object instance to data output stream.

Parameters:

wireFormat - describes the wire format of the broker

dataStructure - Object to be marshaled

dataOut - BinaryReader that provides that data sink

bs - BooleanStream stream used to pack bits from the wire.

Exceptions:

IOException if an error occurs during the marshal.

Reimplemented from `activemq::wireformat::openwire::marshal::v3::ActiveMQDestinationMarshaller` (p. 287).

Reimplemented in `activemq::wireformat::openwire::marshal::v3::ActiveMQTempQueueMarshaller` (p. 530), and `activemq::wireformat::openwire::marshal::v3::ActiveMQTempTopicMarshaller` (p. 555).

6.71.3.5 `virtual void activemq::wireformat::openwire::marshal::v3::ActiveMQTempDestinationMarshaller::tightUnmarshal(OpenWireFormat * wireFormat, commands::DataStructure * dataStructure, decaf::io::DataInputStream * dataIn, utils::BooleanStream * bs) throw (decaf::io::IOException)` [virtual]

Un-marshall an object instance from the data input stream.

Parameters:

- wireFormat* - describes the wire format of the broker.
- dataStructure* - Object to be un-marshaled.
- dataIn* - BinaryReader that provides that data.
- bs* - BooleanStream stream used to unpack bits from the wire.

Exceptions:

- IOException* if an error occurs during the unmarshal.

Reimplemented from `activemq::wireformat::openwire::marshal::v3::ActiveMQDestinationMarshaller` (p. 288).

Reimplemented in `activemq::wireformat::openwire::marshal::v3::ActiveMQTempQueueMarshaller` (p. 531), and `activemq::wireformat::openwire::marshal::v3::ActiveMQTempTopicMarshaller` (p. 556).

- virtual int **tightMarshal1** (**OpenWireFormat** *wireFormat, **commands::DataStructure** *dataStructure, **utils::BooleanStream** *bs) throw (decaf::io::IOException)

Write the booleans that this object uses to a BooleanStream.

- virtual void **tightMarshal2** (**OpenWireFormat** *wireFormat, **commands::DataStructure** *dataStructure, **decaf::io::DataOutputStream** *dataOut, **utils::BooleanStream** *bs) throw (decaf::io::IOException)

Write a object instance to data output stream.

- virtual void **looseUnmarshal** (**OpenWireFormat** *wireFormat, **commands::DataStructure** *dataStructure, **decaf::io::DataInputStream** *dataIn) throw (decaf::io::IOException)

Un-marshal an object instance from the data input stream.

- virtual void **looseMarshal** (**OpenWireFormat** *wireFormat, **commands::DataStructure** *dataStructure, **decaf::io::DataOutputStream** *dataOut) throw (decaf::io::IOException)

Write a object instance to data output stream.

6.75.1 Detailed Description

Marshaling code for Open Wire Format for **ActiveMQTempDestinationMarshaller** (p. 519).

NOTE!: This file is auto generated - do not modify! if you need to make a change, please see the Java Classes in the activemq-openwire-generator module

6.75.2 Constructor & Destructor Documentation

6.75.2.1 `activemq::wireformat::openwire::marshal::v2::ActiveMQTempDestinationMarshaller::ActiveMQTempDestinationMarshaller()` [inline]

6.75.2.2 `virtual activemq::wireformat::openwire::marshal::v2::ActiveMQTempDestinationMarshaller::~ActiveMQTempDestinationMarshaller()` [inline, virtual]

6.75.3 Member Function Documentation

6.75.3.1 `virtual void activemq::wireformat::openwire::marshal::v2::ActiveMQTempDestinationMarshaller::marshal(const OpenWireFormat * wireFormat, commands::DataStructure * dataStructure, decaf::io::DataOutputStream * dataOut) throw (decaf::io::IOException)` [virtual]

Write a object instance to data output stream.

Parameters:

wireFormat - describes the wire format of the broker

dataStructure - Object to be marshaled

dataOut - BinaryWriter that provides that data sink

Exceptions:

IOException if an error occurs during the marshal.

Reimplemented from `activemq::wireformat::openwire::marshal::v2::ActiveMQDestinationMarshaller` (p. 302).

Reimplemented in `activemq::wireformat::openwire::marshal::v2::ActiveMQTempQueueMarshaller` (p. 545), and `activemq::wireformat::openwire::marshal::v2::ActiveMQTempTopicMarshaller` (p. 570).

6.75.3.2 `virtual void activemq::wireformat::openwire::marshal::v2::ActiveMQTempDestinationMarshaller::unmarshal(const OpenWireFormat * wireFormat, commands::DataStructure * dataStructure, decaf::io::DataInputStream * dataIn) throw (decaf::io::IOException)` [virtual]

Un-marshall an object instance from the data input stream.

Parameters:

wireFormat - describes the wire format of the broker

dataStructure - Object to be marshaled

dataIn - BinaryReader that provides that data source

Exceptions:

IOException if an error occurs during the unmarshal.

6.75

activemq::wireformat::openwire::marshal::v2::ActiveMQTempDestinationMarshaller

Class Reference

523

Reimplemented from **activemq::wireformat::openwire::marshal::v2::ActiveMQDestinationMarshaller** (p. 302).

Reimplemented in **activemq::wireformat::openwire::marshal::v2::ActiveMQTempQueueMarshaller** (p. 546), and **activemq::wireformat::openwire::marshal::v2::ActiveMQTempTopicMarshaller** (p. 571).

6.75.3.3 virtual int ac-
tivemq::wireformat::openwire::marshal::v2::ActiveMQTempDestinationMarshaller::tightMa
(OpenWireFormat * *wireFormat*, commands::DataStructure *
***dataStructure*, utils::BooleanStream * *bs*) throw (decaf::io::IOException)**
[virtual]

Write the booleans that this object uses to a BooleanStream.

Parameters:

wireFormat - describes the wire format of the broker

dataStructure - Object to be marshaled

bs - BooleanStream stream used to pack bits from the wire.

Returns:

int value indicating the size of the marshaled object.

Exceptions:

IOException if an error occurs during the marshal.

Reimplemented from **activemq::wireformat::openwire::marshal::v2::ActiveMQDestinationMarshaller** (p. 303).

Reimplemented in **activemq::wireformat::openwire::marshal::v2::ActiveMQTempQueueMarshaller** (p. 546), and **activemq::wireformat::openwire::marshal::v2::ActiveMQTempTopicMarshaller** (p. 571).

6.75.3.4 virtual void ac-
tivemq::wireformat::openwire::marshal::v2::ActiveMQTempDestinationMarshaller::tightMa
(OpenWireFormat * *wireFormat*, commands::DataStructure
*** *dataStructure*, decaf::io::DataOutputStream * *dataOut*,**
utils::BooleanStream * *bs*) throw (decaf::io::IOException) [virtual]

Write a object instance to data output stream.

Parameters:

wireFormat - describes the wire format of the broker

dataStructure - Object to be marshaled

dataOut - BinaryReader that provides that data sink

bs - BooleanStream stream used to pack bits from the wire.

Exceptions:

IOException if an error occurs during the marshal.

Reimplemented from `activemq::wireformat::openwire::marshal::v2::ActiveMQDestinationMarshaller` (p. 303).

Reimplemented in `activemq::wireformat::openwire::marshal::v2::ActiveMQTempQueueMarshaller` (p. 546), and `activemq::wireformat::openwire::marshal::v2::ActiveMQTempTopicMarshaller` (p. 571).

6.75.3.5 `virtual void activemq::wireformat::openwire::marshal::v2::ActiveMQTempDestinationMarshaller::tightUnmarshal(OpenWireFormat * wireFormat, commands::DataStructure * dataStructure, decaf::io::DataInputStream * dataIn, utils::BooleanStream * bs) throw (decaf::io::IOException) [virtual]`

Un-marshall an object instance from the data input stream.

Parameters:

- wireFormat* - describes the wire format of the broker.
- dataStructure* - Object to be un-marshaled.
- dataIn* - BinaryReader that provides that data.
- bs* - BooleanStream stream used to unpack bits from the wire.

Exceptions:

- IOException* if an error occurs during the unmarshal.

Reimplemented from `activemq::wireformat::openwire::marshal::v2::ActiveMQDestinationMarshaller` (p. 304).

Reimplemented in `activemq::wireformat::openwire::marshal::v2::ActiveMQTempQueueMarshaller` (p. 547), and `activemq::wireformat::openwire::marshal::v2::ActiveMQTempTopicMarshaller` (p. 572).

The documentation for this class was generated from the following file:

- `src/main/activemq/wireformat/openwire/marshal/v2/ActiveMQTempDestinationMarshaller.h`

6.76 activemq::commands::ActiveMQTempQueue Class Reference

Clone this object and return a new instance that the caller now owns, this will be an exact copy of this one.
- virtual void **copyDataStructure** (const **DataStructure** *src)
Copy the contents of the passed object into this objects members, overwriting any existing data.
- virtual std::string **toString** () const
Converts the Destination Name into a String.
- virtual bool **equals** (const **DataStructure** *value) const
*Compares the **DataStructure** (p. 1461) passed in to this one, and returns if they are equivalent.*
- virtual const **cms::Destination** * **getCMSDestination** () const
- virtual **cms::Destination::DestinationType** **getDestinationType** () const
Retrieve the Destination Type for this Destination.
- virtual **cms::Destination** * **clone** () const
Creates a new instance of this destination type that is a copy of this one, and returns it.
- virtual void **copy** (const **cms::Destination** &source)
Copies the contents of the given Destinastion object to this one.
- virtual const **cms::CMSProperties** & **getCMSProperties** () const
Retrieve any properties that might be part of the destination that was specified.
- virtual std::string **getQueueName** () const throw (cms::CMSException)
Gets the name of this queue.
- virtual void **destroy** () throw (cms::CMSException)
Destroy's the Temp Destination at the Broker.

Static Public Attributes

- static const unsigned char **ID_ACTIVEMQTEMPQUEUE** = 102

6.76.1 Constructor & Destructor Documentation

6.76.1.1 `activemq::commands::ActiveMQTempQueue::ActiveMQTempQueue ()`

6.76.1.2 `activemq::commands::ActiveMQTempQueue::ActiveMQTempQueue (const std::string & name)`

6.76.1.3 `virtual
activemq::commands::ActiveMQTempQueue::~~ActiveMQTempQueue ()
[virtual]`

6.76.2 Member Function Documentation

6.76.2.1 `virtual cms::Destination* ac-
tivemq::commands::ActiveMQTempQueue::clone () const
[inline, virtual]`

Creates a new instance of this destination type that is a copy of this one, and returns it.

Returns:

cloned copy of this object

Implements **cms::Destination** (p. 1481).

6.76.2.2 `virtual ActiveMQTempQueue* ac-
tivemq::commands::ActiveMQTempQueue::cloneDataStructure () const
[virtual]`

Clone this object and return a new instance that the caller now owns, this will be an exact copy of this one.

Returns:

new copy of this object.

Reimplemented from **activemq::commands::ActiveMQTempDestination** (p. 500).

6.76.2.3 `virtual void activemq::commands::ActiveMQTempQueue::copy (const
cms::Destination & source) [inline, virtual]`

Copies the contents of the given Destination object to this one.

Parameters:

source The source Destination object.

Implements **cms::Destination** (p. 1481).

6.76.2.4 `virtual void activemq::commands::ActiveMQTempQueue::copyDataStructure (const DataStructure * src) [virtual]`

Copy the contents of the passed object into this objects members, overwriting any existing data.

Returns:

src - Source Object

Reimplemented from `activemq::commands::ActiveMQTempDestination` (p. 500).

6.76.2.5 `virtual void activemq::commands::ActiveMQTempQueue::destroy () throw (cms::CMSException) [virtual]`

Destroy's the Temp Destination at the Broker.

Exceptions:

CMSException

Implements `cms::TemporaryQueue` (p. 3166).

6.76.2.6 `virtual bool activemq::commands::ActiveMQTempQueue::equals (const DataStructure * value) const [virtual]`

Compares the `DataStructure` (p. 1461) passed in to this one, and returns if they are equivalent. Equivalent here means that they are of the same type, and that each element of the objects are the same.

Returns:

true if DataStructure's are Equal.

Reimplemented from `activemq::commands::ActiveMQTempDestination` (p. 501).

6.76.2.7 `virtual const cms::Destination* activemq::commands::ActiveMQTempQueue::getCMSDestination () const [inline, virtual]`

Returns:

the `cms::Destination` (p. 1480) interface pointer that the objects that derive from this class implement.

Reimplemented from `activemq::commands::ActiveMQDestination` (p. 278).

6.76.2.8 `virtual const cms::CMSProperties& activemq::commands::ActiveMQTempQueue::getCMSProperties () const [inline, virtual]`

Retrieve any properties that might be part of the destination that was specified. This is a deviation from the JMS spec but necessary due to C++ restrictions.

Returns:

const reference to a properties object.

Implements **cms::Destination** (p. 1481).

6.76.2.9 `virtual unsigned char activemq::commands::ActiveMQTempQueue::getDataStructureType () const [virtual]`

Get the **DataStructure** (p. 1461) Type as defined in CommandTypes.h.

Returns:

The type of the data structure

Reimplemented from **activemq::commands::ActiveMQTempDestination** (p. 501).

6.76.2.10 `virtual cms::Destination::DestinationType activemq::commands::ActiveMQTempQueue::getDestinationType () const [inline, virtual]`

Retrieve the Destination Type for this Destination.

Returns:

The Destination Type

Implements **activemq::commands::ActiveMQDestination** (p. 279).

References cms::Destination::TEMPORARY_QUEUE.

6.76.2.11 `virtual std::string activemq::commands::ActiveMQTempQueue::getQueueName () const throw (cms::CMSException) [inline, virtual]`

Gets the name of this queue.

Returns:

The queue name.

Implements **cms::TemporaryQueue** (p. 3167).

6.76.2.12 `virtual std::string activemq::commands::ActiveMQTempQueue::toString () const [virtual]`

Converts the Destination Name into a String.

Returns:

string name

Reimplemented from **activemq::commands::ActiveMQTempDestination** (p. 501).

6.76.3 Field Documentation

6.76.3.1 `const unsigned char activemq::commands::ActiveMQTempQueue::ID_ - ACTIVEMQTEMPQUEUE = 102` [static]

The documentation for this class was generated from the following file:

- `src/main/activemq/commands/ActiveMQTempQueue.h`

6.77 activemq::wireformat::openwire::marshal::v3::ActiveMQTempQueueMarshaller Class Reference

Marshaling code for Open Wire Format for **ActiveMQTempQueueMarshaller** (p. 528).

#include <src/main/activemq/wireformat/openwire/marshal/v3/ActiveMQTempQueueMarshaller.h> Inheritance diagram for activemq::wireformat::openwire::marshal::v3::ActiveMQTempQueueMarshaller:

Public Member Functions

- **ActiveMQTempQueueMarshaller** ()
- virtual **~ActiveMQTempQueueMarshaller** ()
- virtual **commands::DataStructure * createObject** () const
Creates a new instance of this marshalable type.
- virtual unsigned char **getDataStructureType** () const
Get the Data Structure Type that identifies this Marshaler.
- virtual void **tightUnmarshal** (**OpenWireFormat *wireFormat**, **commands::DataStructure *dataStructure**, **decaf::io::DataInputStream *dataIn**, **utils::BooleanStream *bs**) throw (**decaf::io::IOException**)
Un-marshal an object instance from the data input stream.
- virtual int **tightMarshal** (**OpenWireFormat *wireFormat**, **commands::DataStructure *dataStructure**, **utils::BooleanStream *bs**) throw (**decaf::io::IOException**)
Write the booleans that this object uses to a BooleanStream.
- virtual void **tightMarshal2** (**OpenWireFormat *wireFormat**, **commands::DataStructure *dataStructure**, **decaf::io::DataOutputStream *dataOut**, **utils::BooleanStream *bs**) throw (**decaf::io::IOException**)
Write a object instance to data output stream.
- virtual void **looseUnmarshal** (**OpenWireFormat *wireFormat**, **commands::DataStructure *dataStructure**, **decaf::io::DataInputStream *dataIn**) throw (**decaf::io::IOException**)
Un-marshal an object instance from the data input stream.
- virtual void **looseMarshal** (**OpenWireFormat *wireFormat**, **commands::DataStructure *dataStructure**, **decaf::io::DataOutputStream *dataOut**) throw (**decaf::io::IOException**)
Write a object instance to data output stream.

6.77.1 Detailed Description

Marshaling code for Open Wire Format for **ActiveMQTempQueueMarshaller** (p. 528).
NOTE!: This file is auto generated - do not modify! if you need to make a change, please see the Java Classes in the activemq-openwire-generator module

6.77.2 Constructor & Destructor Documentation

6.77.2.1 `activemq::wireformat::openwire::marshal::v3::ActiveMQTempQueueMarshaller::ActiveMQTempQueueMarshaller()` `[inline]`

6.77.2.2 `virtual activemq::wireformat::openwire::marshal::v3::ActiveMQTempQueueMarshaller::~~ActiveMQTempQueueMarshaller()` `[inline, virtual]`

6.77.3 Member Function Documentation

6.77.3.1 `virtual commands::DataStructure* activemq::wireformat::openwire::marshal::v3::ActiveMQTempQueueMarshaller::createObject()` `const` `[virtual]`

Creates a new instance of this marshalable type.

Returns:

new DataStructure object pointer caller owns it.

Implements `activemq::wireformat::openwire::marshal::DataStreamMarshaller` (p. 1419).

6.77.3.2 `virtual unsigned char activemq::wireformat::openwire::marshal::v3::ActiveMQTempQueueMarshaller::getDataStructureType()` `const` `[virtual]`

Get the Data Structure Type that identifies this Marshaler.

Returns:

byte holding the data structure type value

Implements `activemq::wireformat::openwire::marshal::DataStreamMarshaller` (p. 1424).

6.77.3.3 `virtual void activemq::wireformat::openwire::marshal::v3::ActiveMQTempQueueMarshaller::looseMarshal(OpenWireFormat * wireFormat, commands::DataStructure * dataStructure, decaf::io::DataOutputStream * dataOut) throw (decaf::io::IOException)` `[virtual]`

Write a object instance to data output stream.

Parameters:

wireFormat - describes the wire format of the broker

dataStructure - Object to be marshaled

dataOut - BinaryWriter that provides that data sink

Exceptions:

IOException if an error occurs during the marshal.

Reimplemented from `activemq::wireformat::openwire::marshal::v3::ActiveMQTempDestinationMarshaller` (p. 504).

6.77.3.4 `virtual void activemq::wireformat::openwire::marshal::v3::ActiveMQTempQueueMarshaller::looseUnmarshal(OpenWireFormat * wireFormat, commands::DataStructure * dataStructure, decaf::io::DataInputStream * dataIn) throw (decaf::io::IOException)` [virtual]

Un-marshall an object instance from the data input stream.

Parameters:

wireFormat - describes the wire format of the broker

dataStructure - Object to be marshaled

dataIn - BinaryReader that provides that data source

Exceptions:

IOException if an error occurs during the unmarshal.

Reimplemented from `activemq::wireformat::openwire::marshal::v3::ActiveMQTempDestinationMarshaller` (p. 504).

6.77.3.5 `virtual int activemq::wireformat::openwire::marshal::v3::ActiveMQTempQueueMarshaller::tightMarshal(OpenWireFormat * wireFormat, commands::DataStructure * dataStructure, utils::BooleanStream * bs) throw (decaf::io::IOException)` [virtual]

Write the booleans that this object uses to a BooleanStream.

Parameters:

wireFormat - describes the wire format of the broker

dataStructure - Object to be marshaled

bs - BooleanStream stream used to pack bits from the wire.

Returns:

int value indicating the size of the marshaled object.

Exceptions:

IOException if an error occurs during the marshal.

Reimplemented from `activemq::wireformat::openwire::marshal::v3::ActiveMQTempDestinationMarshaller` (p. 505).

6.77.3.6 `virtual void activemq::wireformat::openwire::marshal::v3::ActiveMQTempQueueMarshaller::tightMarshal(OpenWireFormat * wireFormat, commands::DataStructure * dataStructure, decaf::io::DataOutputStream * dataOut, utils::BooleanStream * bs) throw (decaf::io::IOException) [virtual]`

Write a object instance to data output stream.

Parameters:

wireFormat - describes the wire format of the broker
dataStructure - Object to be marshaled
dataOut - BinaryReader that provides that data sink
bs - BooleanStream stream used to pack bits from the wire.

Exceptions:

IOException if an error occurs during the marshal.

Reimplemented from `activemq::wireformat::openwire::marshal::v3::ActiveMQTempDestinationMarshaller` (p. 505).

6.77.3.7 `virtual void activemq::wireformat::openwire::marshal::v3::ActiveMQTempQueueMarshaller::tightUnmarshal(OpenWireFormat * wireFormat, commands::DataStructure * dataStructure, decaf::io::DataInputStream * dataIn, utils::BooleanStream * bs) throw (decaf::io::IOException) [virtual]`

Un-marshall an object instance from the data input stream.

Parameters:

wireFormat - describes the wire format of the broker.
dataStructure - Object to be un-marshaled.
dataIn - BinaryReader that provides that data.
bs - BooleanStream stream used to unpack bits from the wire.

Exceptions:

IOException if an error occurs during the unmarshal.

Reimplemented from `activemq::wireformat::openwire::marshal::v3::ActiveMQTempDestinationMarshaller` (p. 506).

The documentation for this class was generated from the following file:

6.78.3 Member Function Documentation

6.78.3.1 `virtual commands::DataStructure* activemq::wireformat::openwire::marshal::v1::ActiveMQTempQueueMarshaller::createObject()` `const` `[virtual]`

Creates a new instance of this marshalable type.

Returns:

new DataStructure object pointer caller owns it.

Implements `activemq::wireformat::openwire::marshal::DataStreamMarshaller` (p. 1419).

6.78.3.2 `virtual unsigned char activemq::wireformat::openwire::marshal::v1::ActiveMQTempQueueMarshaller::getDataStructureType()` `const` `[virtual]`

Get the Data Structure Type that identifies this Marshaler.

Returns:

byte holding the data structure type value

Implements `activemq::wireformat::openwire::marshal::DataStreamMarshaller` (p. 1424).

6.78.3.3 `virtual void activemq::wireformat::openwire::marshal::v1::ActiveMQTempQueueMarshaller::looseMarshal(OpenWireFormat * wireFormat, commands::DataStructure * dataStructure, decaf::io::DataOutputStream * dataOut) throw (decaf::io::IOException)` `[virtual]`

Write a object instance to data output stream.

Parameters:

wireFormat - describes the wire format of the broker

dataStructure - Object to be marshaled

dataOut - BinaryWriter that provides that data sink

Exceptions:

IOException if an error occurs during the marshal.

Reimplemented from `activemq::wireformat::openwire::marshal::v1::ActiveMQTempDestinationMarshaller` (p. 508).

6.78.3.4 `virtual void activemq::wireformat::openwire::marshal::v1::ActiveMQTempQueueMarshaller::looseUnmarshal(OpenWireFormat * wireFormat, commands::DataStructure * dataStructure, decaf::io::DataInputStream * dataIn) throw (decaf::io::IOException)` [virtual]

Un-marshall an object instance from the data input stream.

Parameters:

wireFormat - describes the wire format of the broker

dataStructure - Object to be marshaled

dataIn - BinaryReader that provides that data source

Exceptions:

IOException if an error occurs during the unmarshal.

Reimplemented from `activemq::wireformat::openwire::marshal::v1::ActiveMQTempDestinationMarshaller` (p. 508).

6.78.3.5 `virtual int activemq::wireformat::openwire::marshal::v1::ActiveMQTempQueueMarshaller::tightMarshal(OpenWireFormat * wireFormat, commands::DataStructure * dataStructure, utils::BooleanStream * bs) throw (decaf::io::IOException)` [virtual]

Write the booleans that this object uses to a BooleanStream.

Parameters:

wireFormat - describes the wire format of the broker

dataStructure - Object to be marshaled

bs - BooleanStream stream used to pack bits from the wire.

Returns:

int value indicating the size of the marshaled object.

Exceptions:

IOException if an error occurs during the marshal.

Reimplemented from `activemq::wireformat::openwire::marshal::v1::ActiveMQTempDestinationMarshaller` (p. 509).

6.78.3.6 `virtual void activemq::wireformat::openwire::marshal::v1::ActiveMQTempQueueMarshaller::tightMarshal(OpenWireFormat * wireFormat, commands::DataStructure * dataStructure, decaf::io::DataOutputStream * dataOut, utils::BooleanStream * bs) throw (decaf::io::IOException) [virtual]`

Write a object instance to data output stream.

Parameters:

wireFormat - describes the wire format of the broker
dataStructure - Object to be marshaled
dataOut - BinaryReader that provides that data sink
bs - BooleanStream stream used to pack bits from the wire.

Exceptions:

IOException if an error occurs during the marshal.

Reimplemented from `activemq::wireformat::openwire::marshal::v1::ActiveMQTempDestinationMarshaller` (p. 509).

6.78.3.7 `virtual void activemq::wireformat::openwire::marshal::v1::ActiveMQTempQueueMarshaller::tightUnmarshal(OpenWireFormat * wireFormat, commands::DataStructure * dataStructure, decaf::io::DataInputStream * dataIn, utils::BooleanStream * bs) throw (decaf::io::IOException) [virtual]`

Un-marshal an object instance from the data input stream.

Parameters:

wireFormat - describes the wire format of the broker.
dataStructure - Object to be un-marshaled.
dataIn - BinaryReader that provides that data.
bs - BooleanStream stream used to unpack bits from the wire.

Exceptions:

IOException if an error occurs during the unmarshal.

Reimplemented from `activemq::wireformat::openwire::marshal::v1::ActiveMQTempDestinationMarshaller` (p. 510).

new DataStructure object pointer caller owns it.

Implements `activemq::wireformat::openwire::marshal::DataStreamMarshaller` (p. 1419).

6.79.3.2 `virtual unsigned char activemq::wireformat::openwire::marshal::v4::ActiveMQTempQueueMarshaller::getDataStructureType()` const [virtual]

Get the Data Structure Type that identifies this Marshaler.

Returns:

byte holding the data structure type value

Implements `activemq::wireformat::openwire::marshal::DataStreamMarshaller` (p. 1424).

6.79.3.3 `virtual void activemq::wireformat::openwire::marshal::v4::ActiveMQTempQueueMarshaller::looseMarshal(OpenWireFormat * wireFormat, commands::DataStructure * dataStructure, decaf::io::DataOutputStream * dataOut) throw (decaf::io::IOException)` [virtual]

Write a object instance to data output stream.

Parameters:

wireFormat - describes the wire format of the broker

dataStructure - Object to be marshaled

dataOut - BinaryWriter that provides that data sink

Exceptions:

IOException if an error occurs during the marshal.

Reimplemented from `activemq::wireformat::openwire::marshal::v4::ActiveMQTempDestinationMarshaller` (p. 512).

6.79.3.4 `virtual void activemq::wireformat::openwire::marshal::v4::ActiveMQTempQueueMarshaller::looseUnmarshal(OpenWireFormat * wireFormat, commands::DataStructure * dataStructure, decaf::io::DataInputStream * dataIn) throw (decaf::io::IOException)` [virtual]

Un-marshall an object instance from the data input stream.

Parameters:

wireFormat - describes the wire format of the broker

dataStructure - Object to be marshaled

dataIn - BinaryReader that provides that data source

Exceptions:

IOException if an error occurs during the unmarshal.

Reimplemented from `activemq::wireformat::openwire::marshal::v4::ActiveMQTempDestinationMarshaller` (p. 512).

6.79.3.5 `virtual int activemq::wireformat::openwire::marshal::v4::ActiveMQTempQueueMarshaller::tightMarshal(OpenWireFormat * wireFormat, commands::DataStructure * dataStructure, utils::BooleanStream * bs) throw (decaf::io::IOException)` [virtual]

Write the booleans that this object uses to a BooleanStream.

Parameters:

wireFormat - describes the wire format of the broker

dataStructure - Object to be marshaled

bs - BooleanStream stream used to pack bits from the wire.

Returns:

int value indicating the size of the marshaled object.

Exceptions:

IOException if an error occurs during the marshal.

Reimplemented from `activemq::wireformat::openwire::marshal::v4::ActiveMQTempDestinationMarshaller` (p. 513).

6.79.3.6 `virtual void activemq::wireformat::openwire::marshal::v4::ActiveMQTempQueueMarshaller::tightMarshal(OpenWireFormat * wireFormat, commands::DataStructure * dataStructure, decaf::io::DataOutputStream * dataOut, utils::BooleanStream * bs) throw (decaf::io::IOException) [virtual]`

Write a object instance to data output stream.

Parameters:

wireFormat - describes the wire format of the broker
dataStructure - Object to be marshaled
dataOut - BinaryReader that provides that data sink
bs - BooleanStream stream used to pack bits from the wire.

Exceptions:

IOException if an error occurs during the marshal.

Reimplemented from `activemq::wireformat::openwire::marshal::v4::ActiveMQTempDestinationMarshaller` (p. 513).

6.79.3.7 `virtual void activemq::wireformat::openwire::marshal::v4::ActiveMQTempQueueMarshaller::tightUnmarshal(OpenWireFormat * wireFormat, commands::DataStructure * dataStructure, decaf::io::DataInputStream * dataIn, utils::BooleanStream * bs) throw (decaf::io::IOException) [virtual]`

Un-marshal an object instance from the data input stream.

Parameters:

wireFormat - describes the wire format of the broker.
dataStructure - Object to be un-marshaled.
dataIn - BinaryReader that provides that data.
bs - BooleanStream stream used to unpack bits from the wire.

Exceptions:

IOException if an error occurs during the unmarshal.

Reimplemented from `activemq::wireformat::openwire::marshal::v4::ActiveMQTempDestinationMarshaller` (p. 514).

The documentation for this class was generated from the following file:

6.80.1 Detailed Description

Marshaling code for Open Wire Format for **ActiveMQTempQueueMarshaller** (p. 540).
NOTE!: This file is auto generated - do not modify! if you need to make a change, please see the Java Classes in the activemq-openwire-generator module

6.80.2 Constructor & Destructor Documentation

6.80.2.1 `activemq::wireformat::openwire::marshal::v5::ActiveMQTempQueueMarshaller::ActiveMQTempQueueMarshaller()` [inline]

6.80.2.2 `virtual activemq::wireformat::openwire::marshal::v5::ActiveMQTempQueueMarshaller::~~ActiveMQTempQueueMarshaller()` [inline, virtual]

6.80.3 Member Function Documentation

6.80.3.1 `virtual commands::DataStructure* activemq::wireformat::openwire::marshal::v5::ActiveMQTempQueueMarshaller::createObject()` const [virtual]

Creates a new instance of this marshalable type.

Returns:

new DataStructure object pointer caller owns it.

Implements `activemq::wireformat::openwire::marshal::DataStreamMarshaller` (p. 1419).

6.80.3.2 `virtual unsigned char activemq::wireformat::openwire::marshal::v5::ActiveMQTempQueueMarshaller::getDataStructureType()` const [virtual]

Get the Data Structure Type that identifies this Marshaler.

Returns:

byte holding the data structure type value

Implements `activemq::wireformat::openwire::marshal::DataStreamMarshaller` (p. 1424).

6.80.3.3 `virtual void activemq::wireformat::openwire::marshal::v5::ActiveMQTempQueueMarshaller::looseMarshal(OpenWireFormat * wireFormat, commands::DataStructure * dataStructure, decaf::io::DataOutputStream * dataOut) throw (decaf::io::IOException)` [virtual]

Write a object instance to data output stream.

Parameters:

wireFormat - describes the wire format of the broker

dataStructure - Object to be marshaled

dataOut - BinaryWriter that provides that data sink

Exceptions:

IOException if an error occurs during the marshal.

Reimplemented from `activemq::wireformat::openwire::marshal::v5::ActiveMQTempDestinationMarshaller` (p. 516).

6.80.3.4 `virtual void activemq::wireformat::openwire::marshal::v5::ActiveMQTempQueueMarshaller::looseUnmarshal(OpenWireFormat * wireFormat, commands::DataStructure * dataStructure, decaf::io::DataInputStream * dataIn) throw (decaf::io::IOException)` [virtual]

Un-marshall an object instance from the data input stream.

Parameters:

wireFormat - describes the wire format of the broker

dataStructure - Object to be marshaled

dataIn - BinaryReader that provides that data source

Exceptions:

IOException if an error occurs during the unmarshal.

Reimplemented from `activemq::wireformat::openwire::marshal::v5::ActiveMQTempDestinationMarshaller` (p. 516).

6.80.3.5 `virtual int activemq::wireformat::openwire::marshal::v5::ActiveMQTempQueueMarshaller::tightMarshal(OpenWireFormat * wireFormat, commands::DataStructure * dataStructure, utils::BooleanStream * bs) throw (decaf::io::IOException)` [virtual]

Write the booleans that this object uses to a BooleanStream.

Parameters:

wireFormat - describes the wire format of the broker

dataStructure - Object to be marshaled

bs - BooleanStream stream used to pack bits from the wire.

Returns:

int value indicating the size of the marshaled object.

Exceptions:

IOException if an error occurs during the marshal.

Reimplemented from `activemq::wireformat::openwire::marshal::v5::ActiveMQTempDestinationMarshaller` (p. 517).

6.80.3.6 `virtual void activemq::wireformat::openwire::marshal::v5::ActiveMQTempQueueMarshaller::tightMarshal(OpenWireFormat * wireFormat, commands::DataStructure * dataStructure, decaf::io::DataOutputStream * dataOut, utils::BooleanStream * bs) throw (decaf::io::IOException) [virtual]`

Write a object instance to data output stream.

Parameters:

wireFormat - describes the wire format of the broker
dataStructure - Object to be marshaled
dataOut - BinaryReader that provides that data sink
bs - BooleanStream stream used to pack bits from the wire.

Exceptions:

IOException if an error occurs during the marshal.

Reimplemented from `activemq::wireformat::openwire::marshal::v5::ActiveMQTempDestinationMarshaller` (p. 517).

6.80.3.7 `virtual void activemq::wireformat::openwire::marshal::v5::ActiveMQTempQueueMarshaller::tightUnmarshal(OpenWireFormat * wireFormat, commands::DataStructure * dataStructure, decaf::io::DataInputStream * dataIn, utils::BooleanStream * bs) throw (decaf::io::IOException) [virtual]`

Un-marshal an object instance from the data input stream.

Parameters:

wireFormat - describes the wire format of the broker.
dataStructure - Object to be un-marshaled.
dataIn - BinaryReader that provides that data.
bs - BooleanStream stream used to unpack bits from the wire.

Exceptions:

IOException if an error occurs during the unmarshal.

Reimplemented from `activemq::wireformat::openwire::marshal::v5::ActiveMQTempDestinationMarshaller` (p. 518).

The documentation for this class was generated from the following file:

6.81.1 Detailed Description

Marshaling code for Open Wire Format for **ActiveMQTempQueueMarshaller** (p. 544).
NOTE!: This file is auto generated - do not modify! if you need to make a change, please see the Java Classes in the activemq-openwire-generator module

6.81.2 Constructor & Destructor Documentation

6.81.2.1 `activemq::wireformat::openwire::marshal::v2::ActiveMQTempQueueMarshaller::ActiveMQTempQueueMarshaller()` `[inline]`

6.81.2.2 `virtual activemq::wireformat::openwire::marshal::v2::ActiveMQTempQueueMarshaller::~~ActiveMQTempQueueMarshaller()` `[inline, virtual]`

6.81.3 Member Function Documentation

6.81.3.1 `virtual commands::DataStructure* activemq::wireformat::openwire::marshal::v2::ActiveMQTempQueueMarshaller::createObject()` `const` `[virtual]`

Creates a new instance of this marshalable type.

Returns:

new DataStructure object pointer caller owns it.

Implements `activemq::wireformat::openwire::marshal::DataStreamMarshaller` (p. 1419).

6.81.3.2 `virtual unsigned char activemq::wireformat::openwire::marshal::v2::ActiveMQTempQueueMarshaller::getDataStructureType()` `const` `[virtual]`

Get the Data Structure Type that identifies this Marshaler.

Returns:

byte holding the data structure type value

Implements `activemq::wireformat::openwire::marshal::DataStreamMarshaller` (p. 1424).

6.81.3.3 `virtual void activemq::wireformat::openwire::marshal::v2::ActiveMQTempQueueMarshaller::looseMarshal(OpenWireFormat * wireFormat, commands::DataStructure * dataStructure, decaf::io::DataOutputStream * dataOut) throw (decaf::io::IOException)` `[virtual]`

Write a object instance to data output stream.

Parameters:

wireFormat - describes the wire format of the broker

dataStructure - Object to be marshaled

dataOut - BinaryWriter that provides that data sink

Exceptions:

IOException if an error occurs during the marshal.

Reimplemented from `activemq::wireformat::openwire::marshal::v2::ActiveMQTempDestinationMarshaller` (p. 520).

6.81.3.4 `virtual void activemq::wireformat::openwire::marshal::v2::ActiveMQTempQueueMarshaller::looseUnmarshal(OpenWireFormat * wireFormat, commands::DataStructure * dataStructure, decaf::io::DataInputStream * dataIn) throw (decaf::io::IOException)` [virtual]

Un-marshall an object instance from the data input stream.

Parameters:

wireFormat - describes the wire format of the broker

dataStructure - Object to be marshaled

dataIn - BinaryReader that provides that data source

Exceptions:

IOException if an error occurs during the unmarshal.

Reimplemented from `activemq::wireformat::openwire::marshal::v2::ActiveMQTempDestinationMarshaller` (p. 520).

6.81.3.5 `virtual int activemq::wireformat::openwire::marshal::v2::ActiveMQTempQueueMarshaller::tightMarshal(OpenWireFormat * wireFormat, commands::DataStructure * dataStructure, utils::BooleanStream * bs) throw (decaf::io::IOException)` [virtual]

Write the booleans that this object uses to a BooleanStream.

Parameters:

wireFormat - describes the wire format of the broker

dataStructure - Object to be marshaled

bs - BooleanStream stream used to pack bits from the wire.

Returns:

int value indicating the size of the marshaled object.

Exceptions:

IOException if an error occurs during the marshal.

Reimplemented from `activemq::wireformat::openwire::marshal::v2::ActiveMQTempDestinationMarshaller` (p. 521).

6.81.3.6 `virtual void activemq::wireformat::openwire::marshal::v2::ActiveMQTempQueueMarshaller::tightMarshal(OpenWireFormat * wireFormat, commands::DataStructure * dataStructure, decaf::io::DataOutputStream * dataOut, utils::BooleanStream * bs) throw (decaf::io::IOException) [virtual]`

Write a object instance to data output stream.

Parameters:

wireFormat - describes the wire format of the broker
dataStructure - Object to be marshaled
dataOut - BinaryReader that provides that data sink
bs - BooleanStream stream used to pack bits from the wire.

Exceptions:

IOException if an error occurs during the marshal.

Reimplemented from `activemq::wireformat::openwire::marshal::v2::ActiveMQTempDestinationMarshaller` (p. 521).

6.81.3.7 `virtual void activemq::wireformat::openwire::marshal::v2::ActiveMQTempQueueMarshaller::tightUnmarshal(OpenWireFormat * wireFormat, commands::DataStructure * dataStructure, decaf::io::DataInputStream * dataIn, utils::BooleanStream * bs) throw (decaf::io::IOException) [virtual]`

Un-marshal an object instance from the data input stream.

Parameters:

wireFormat - describes the wire format of the broker.
dataStructure - Object to be un-marshaled.
dataIn - BinaryReader that provides that data.
bs - BooleanStream stream used to unpack bits from the wire.

Exceptions:

IOException if an error occurs during the unmarshal.

Reimplemented from `activemq::wireformat::openwire::marshal::v2::ActiveMQTempDestinationMarshaller` (p. 522).

The documentation for this class was generated from the following file:

- `src/main/activemq/wireformat/openwire/marshal/v2/ActiveMQTempQueueMarshaller.h`

6.82 activemq::commands::ActiveMQTempTopic Class Reference

#include <src/main/activemq/commands/ActiveMQTempTopic.h> Inheritance diagram for activemq::commands::ActiveMQTempTopic:

Public Member Functions

- **ActiveMQTempTopic** ()

- virtual unsigned char **getDataStructureType** () const
*Get the **DataStructure** (p. 1461) Type as defined in CommandTypes.h.*
- virtual **ActiveMQTempTopic** * **cloneDataStructure** () const
Clone this object and return a new instance that the caller now owns, this will be an exact copy of this one.
- virtual void **copyDataStructure** (const **DataStructure** *src)
Copy the contents of the passed object into this objects members, overwriting any existing data.
- virtual std::string **toString** () const
Converts the Destination Name into a String.
- virtual bool **equals** (const **DataStructure** *value) const
*Compares the **DataStructure** (p. 1461) passed in to this one, and returns if they are equivalent.*
- virtual const **cms::Destination** * **getCMSDestination** () const
- virtual **cms::Destination::DestinationType** **getDestinationType** () const
Retrieve the Destination Type for this Destination.
- virtual **cms::Destination** * **clone** () const
Creates a new instance of this destination type that is a copy of this one, and returns it.
- virtual void **copy** (const **cms::Destination** &source)
Copies the contents of the given Destinastion object to this one.
- virtual const **cms::CMSProperties** & **getCMSProperties** () const
Retrieve any properties that might be part of the destination that was specified.
- virtual std::string **getTopicName** () const throw (cms::CMSException)
Gets the name of this topic.
- virtual void **destroy** () throw (cms::CMSException)
Destroy's the Temp Destination at the Broker.

Static Public Attributes

- static const unsigned char **ID_ACTIVEMQTEMPTOPIC** = 103

6.82.1 Constructor & Destructor Documentation

6.82.1.1 `activemq::commands::ActiveMQTempTopic::ActiveMQTempTopic ()`

6.82.1.2 `activemq::commands::ActiveMQTempTopic::ActiveMQTempTopic (const std::string & name)`

6.82.1.3 `virtual
activemq::commands::ActiveMQTempTopic::~~ActiveMQTempTopic ()
[virtual]`

6.82.2 Member Function Documentation

6.82.2.1 `virtual cms::Destination* ac-
tivemq::commands::ActiveMQTempTopic::clone () const
[inline, virtual]`

Creates a new instance of this destination type that is a copy of this one, and returns it.

Returns:

cloned copy of this object

Implements **cms::Destination** (p. 1481).

6.82.2.2 `virtual ActiveMQTempTopic* ac-
tivemq::commands::ActiveMQTempTopic::cloneDataStructure () const
[virtual]`

Clone this object and return a new instance that the caller now owns, this will be an exact copy of this one.

Returns:

new copy of this object.

Reimplemented from **activemq::commands::ActiveMQTempDestination** (p. 500).

6.82.2.3 `virtual void activemq::commands::ActiveMQTempTopic::copy (const cms::Destination & source) [inline, virtual]`

Copies the contents of the given Destination object to this one.

Parameters:

source The source Destination object.

Implements **cms::Destination** (p. 1481).

6.82.2.4 `virtual void activemq::commands::ActiveMQTempTopic::copyDataStructure (const DataStructure * src) [virtual]`

Copy the contents of the passed object into this objects members, overwriting any existing data.

Returns:

src - Source Object

Reimplemented from `activemq::commands::ActiveMQTempDestination` (p. 500).

6.82.2.5 `virtual void activemq::commands::ActiveMQTempTopic::destroy () throw (cms::CMSException) [virtual]`

Destroy's the Temp Destination at the Broker.

Exceptions:

CMSException

Implements `cms::TemporaryTopic` (p. 3168).

6.82.2.6 `virtual bool activemq::commands::ActiveMQTempTopic::equals (const DataStructure * value) const [virtual]`

Compares the `DataStructure` (p. 1461) passed in to this one, and returns if they are equivalent. Equivalent here means that they are of the same type, and that each element of the objects are the same.

Returns:

true if DataStructure's are Equal.

Reimplemented from `activemq::commands::ActiveMQTempDestination` (p. 501).

6.82.2.7 `virtual const cms::Destination* activemq::commands::ActiveMQTempTopic::getCMSDestination () const [inline, virtual]`

Returns:

the `cms::Destination` (p. 1480) interface pointer that the objects that derive from this class implement.

Reimplemented from `activemq::commands::ActiveMQDestination` (p. 278).

6.82.2.8 `virtual const cms::CMSPProperties& activemq::commands::ActiveMQTempTopic::getCMSPProperties () const [inline, virtual]`

Retrieve any properties that might be part of the destination that was specified. This is a deviation from the JMS spec but necessary due to C++ restrictions.

Returns:

const reference to a properties object.

Implements **cms::Destination** (p. 1481).

6.82.2.9 `virtual unsigned char activemq::commands::ActiveMQTempTopic::getDataStructureType () const [virtual]`

Get the **DataStructure** (p. 1461) Type as defined in CommandTypes.h.

Returns:

The type of the data structure

Reimplemented from **activemq::commands::ActiveMQTempDestination** (p. 501).

6.82.2.10 `virtual cms::Destination::DestinationType activemq::commands::ActiveMQTempTopic::getDestinationType () const [inline, virtual]`

Retrieve the Destination Type for this Destination.

Returns:

The Destination Type

Implements **activemq::commands::ActiveMQDestination** (p. 279).

References cms::Destination::TEMPORARY_TOPIC.

6.82.2.11 `virtual std::string activemq::commands::ActiveMQTempTopic::getTopicName () const throw (cms::CMSException) [inline, virtual]`

Gets the name of this topic.

Returns:

The topic name.

Implements **cms::TemporaryTopic** (p. 3169).

6.82.2.12 `virtual std::string activemq::commands::ActiveMQTempTopic::toString () const [virtual]`

Converts the Destination Name into a String.

Returns:

string name

Reimplemented from **activemq::commands::ActiveMQTempDestination** (p. 501).

6.82.3 Field Documentation

6.82.3.1 `const unsigned char activemq::commands::ActiveMQTempTopic::ID - ACTIVEMQTEMPTOPIC = 103` [static]

The documentation for this class was generated from the following file:

Creates a new instance of this marshalable type.
- virtual unsigned char **getDataStructureType** () const
Get the Data Structure Type that identifies this Marshaler.
- virtual void **tightUnmarshal** (OpenWireFormat *wireFormat, **commands::DataStructure** *dataStructure, **decaf::io::DataInputStream** *dataIn, **utils::BooleanStream** *bs) throw (decaf::io::IOException)
Un-marshal an object instance from the data input stream.
- virtual int **tightMarshal** (OpenWireFormat *wireFormat, **commands::DataStructure** *dataStructure, **utils::BooleanStream** *bs) throw (decaf::io::IOException)
Write the booleans that this object uses to a BooleanStream.
- virtual void **tightMarshal2** (OpenWireFormat *wireFormat, **commands::DataStructure** *dataStructure, **decaf::io::DataOutputStream** *dataOut, **utils::BooleanStream** *bs) throw (decaf::io::IOException)
Write a object instance to data output stream.
- virtual void **looseUnmarshal** (OpenWireFormat *wireFormat, **commands::DataStructure** *dataStructure, **decaf::io::DataInputStream** *dataIn) throw (decaf::io::IOException)
Un-marshal an object instance from the data input stream.
- virtual void **looseMarshal** (OpenWireFormat *wireFormat, **commands::DataStructure** *dataStructure, **decaf::io::DataOutputStream** *dataOut) throw (decaf::io::IOException)
Write a object instance to data output stream.

6.83.1 Detailed Description

Marshaling code for Open Wire Format for **ActiveMQTempTopicMarshaller** (p. 553). NOTE!: This file is auto generated - do not modify! if you need to make a change, please see the Java Classes in the activemq-openwire-generator module

6.83.2 Constructor & Destructor Documentation

6.83.2.1 `activemq::wireformat::openwire::marshal::v3::ActiveMQTempTopicMarshaller::ActiveMQTempTopicMarshaller()` [inline]

6.83.2.2 `virtual activemq::wireformat::openwire::marshal::v3::ActiveMQTempTopicMarshaller::~~ActiveMQTempTopicMarshaller()` [inline, virtual]

6.83.3 Member Function Documentation

6.83.3.1 `virtual commands::DataStructure* activemq::wireformat::openwire::marshal::v3::ActiveMQTempTopicMarshaller::createObject()` const [virtual]

Creates a new instance of this marshalable type.

Returns:

new DataStructure object pointer caller owns it.

Implements `activemq::wireformat::openwire::marshal::DataStreamMarshaller` (p. 1419).

6.83.3.2 `virtual unsigned char activemq::wireformat::openwire::marshal::v3::ActiveMQTempTopicMarshaller::getDataStructureType()` const [virtual]

Get the Data Structure Type that identifies this Marshaler.

Returns:

byte holding the data structure type value

Implements `activemq::wireformat::openwire::marshal::DataStreamMarshaller` (p. 1424).

6.83.3.3 `virtual void activemq::wireformat::openwire::marshal::v3::ActiveMQTempTopicMarshaller::looseMarshal(OpenWireFormat * wireFormat, commands::DataStructure * dataStructure, decaf::io::DataOutputStream * dataOut) throw (decaf::io::IOException)` [virtual]

Write a object instance to data output stream.

Parameters:

wireFormat - describes the wire format of the broker

dataStructure - Object to be marshaled

dataOut - BinaryWriter that provides that data sink

Exceptions:

IOException if an error occurs during the marshal.

Reimplemented from `activemq::wireformat::openwire::marshal::v3::ActiveMQTempDestinationMarshaller` (p. 504).

6.83.3.4 `virtual void activemq::wireformat::openwire::marshal::v3::ActiveMQTempTopicMarshaller::looseUnmarshal (OpenWireFormat * wireFormat, commands::DataStructure * dataStructure, decaf::io::DataInputStream * dataIn) throw (decaf::io::IOException)` [virtual]

Un-marshall an object instance from the data input stream.

Parameters:

wireFormat - describes the wire format of the broker

dataStructure - Object to be marshaled

dataIn - BinaryReader that provides that data source

Exceptions:

IOException if an error occurs during the unmarshal.

Reimplemented from `activemq::wireformat::openwire::marshal::v3::ActiveMQTempDestinationMarshaller` (p. 504).

6.83.3.5 `virtual int activemq::wireformat::openwire::marshal::v3::ActiveMQTempTopicMarshaller::tightMarshal1 (OpenWireFormat * wireFormat, commands::DataStructure * dataStructure, utils::BooleanStream * bs) throw (decaf::io::IOException)` [virtual]

Write the booleans that this object uses to a BooleanStream.

Parameters:

wireFormat - describes the wire format of the broker

dataStructure - Object to be marshaled

bs - BooleanStream stream used to pack bits from the wire.

Returns:

int value indicating the size of the marshaled object.

Exceptions:

IOException if an error occurs during the marshal.

Reimplemented from `activemq::wireformat::openwire::marshal::v3::ActiveMQTempDestinationMarshaller` (p. 505).

6.83.3.6 `virtual void activemq::wireformat::openwire::marshal::v3::ActiveMQTempTopicMarshaller::tightMarshal2 (OpenWireFormat * wireFormat, commands::DataStructure * dataStructure, decaf::io::DataOutputStream * dataOut, utils::BooleanStream * bs) throw (decaf::io::IOException) [virtual]`

Write a object instance to data output stream.

Parameters:

wireFormat - describes the wire format of the broker
dataStructure - Object to be marshaled
dataOut - BinaryReader that provides that data sink
bs - BooleanStream stream used to pack bits from the wire.

Exceptions:

IOException if an error occurs during the marshal.

Reimplemented from `activemq::wireformat::openwire::marshal::v3::ActiveMQTempDestinationMarshaller` (p. 505).

6.83.3.7 `virtual void activemq::wireformat::openwire::marshal::v3::ActiveMQTempTopicMarshaller::tightUnmarshal (OpenWireFormat * wireFormat, commands::DataStructure * dataStructure, decaf::io::DataInputStream * dataIn, utils::BooleanStream * bs) throw (decaf::io::IOException) [virtual]`

Un-marshal an object instance from the data input stream.

Parameters:

wireFormat - describes the wire format of the broker.
dataStructure - Object to be un-marshaled.
dataIn - BinaryReader that provides that data.
bs - BooleanStream stream used to unpack bits from the wire.

Exceptions:

IOException if an error occurs during the unmarshal.

Reimplemented from `activemq::wireformat::openwire::marshal::v3::ActiveMQTempDestinationMarshaller` (p. 506).

The documentation for this class was generated from the following file:

- `src/main/activemq/wireformat/openwire/marshal/v3/ActiveMQTempTopicMarshaller.h`

6.84 activemq::wireformat::openwire::marshal::v1::ActiveMQTempTopic Class Reference

Marshaling code for Open Wire Format for **ActiveMQTempTopicMarshaller** (p. 557).

Write a object instance to data output stream.

6.84.1 Detailed Description

Marshaling code for Open Wire Format for **ActiveMQTempTopicMarshaller** (p. 557). NOTE!: This file is auto generated - do not modify! if you need to make a change, please see the Java Classes in the activemq-openwire-generator module

6.84.2 Constructor & Destructor Documentation

6.84.2.1 `activemq::wireformat::openwire::marshal::v1::ActiveMQTempTopicMarshaller::ActiveMQTempTopicMarshaller()` [inline]

6.84.2.2 `virtual activemq::wireformat::openwire::marshal::v1::ActiveMQTempTopicMarshaller::~~ActiveMQTempTopicMarshaller()` [inline, virtual]

6.84.3 Member Function Documentation

6.84.3.1 `virtual commands::DataStructure* activemq::wireformat::openwire::marshal::v1::ActiveMQTempTopicMarshaller::createObject() const` [virtual]

Creates a new instance of this marshalable type.

Returns:

new DataStructure object pointer caller owns it.

Implements `activemq::wireformat::openwire::marshal::DataStreamMarshaller` (p. 1419).

6.84.3.2 `virtual unsigned char activemq::wireformat::openwire::marshal::v1::ActiveMQTempTopicMarshaller::getDataStructureType() const` [virtual]

Get the Data Structure Type that identifies this Marshaler.

Returns:

byte holding the data structure type value

Implements `activemq::wireformat::openwire::marshal::DataStreamMarshaller` (p. 1424).

6.84.3.3 `virtual void activemq::wireformat::openwire::marshal::v1::ActiveMQTempTopicMarshaller::looseMarshal(OpenWireFormat * wireFormat, commands::DataStructure * dataStructure, decaf::io::DataOutputStream * dataOut) throw (decaf::io::IOException)` [virtual]

Write a object instance to data output stream.

Parameters:

wireFormat - describes the wire format of the broker

dataStructure - Object to be marshaled

dataOut - BinaryWriter that provides that data sink

Exceptions:

IOException if an error occurs during the marshal.

Reimplemented from `activemq::wireformat::openwire::marshal::v1::ActiveMQTempDestinationMarshaller` (p. 508).

6.84.3.4 `virtual void activemq::wireformat::openwire::marshal::v1::ActiveMQTempTopicMarshaller::looseUnmarshal (OpenWireFormat * wireFormat, commands::DataStructure * dataStructure, decaf::io::DataInputStream * dataIn) throw (decaf::io::IOException)` [virtual]

Un-marshall an object instance from the data input stream.

Parameters:

wireFormat - describes the wire format of the broker

dataStructure - Object to be marshaled

dataIn - BinaryReader that provides that data source

Exceptions:

IOException if an error occurs during the unmarshal.

Reimplemented from `activemq::wireformat::openwire::marshal::v1::ActiveMQTempDestinationMarshaller` (p. 508).

6.84.3.5 `virtual int activemq::wireformat::openwire::marshal::v1::ActiveMQTempTopicMarshaller::tightMarshal1 (OpenWireFormat * wireFormat, commands::DataStructure * dataStructure, utils::BooleanStream * bs) throw (decaf::io::IOException)` [virtual]

Write the booleans that this object uses to a BooleanStream.

Parameters:

wireFormat - describes the wire format of the broker

dataStructure - Object to be marshaled

bs - BooleanStream stream used to pack bits from the wire.

Returns:

int value indicating the size of the marshaled object.

Exceptions:

IOException if an error occurs during the marshal.

Reimplemented from `activemq::wireformat::openwire::marshal::v1::ActiveMQTempDestinationMarshaller` (p. 509).

```

6.84.3.6 virtual void ac-
tivemq::wireformat::openwire::marshal::v1::ActiveMQTempTopicMarshaller::tightMarshal2
(OpenWireFormat * wireFormat, commands::DataStructure
* dataStructure, decaf::io::DataOutputStream * dataOut,
utils::BooleanStream * bs) throw ( decaf::io::IOException ) [virtual]

```

Write a object instance to data output stream.

Parameters:

wireFormat - describes the wire format of the broker
dataStructure - Object to be marshaled
dataOut - BinaryReader that provides that data sink
bs - BooleanStream stream used to pack bits from the wire.

Exceptions:

IOException if an error occurs during the marshal.

Reimplemented from `activemq::wireformat::openwire::marshal::v1::ActiveMQTempDestinationMarshaller` (p. 509).

```

6.84.3.7 virtual void ac-
tivemq::wireformat::openwire::marshal::v1::ActiveMQTempTopicMarshaller::tightUnmarshal
(OpenWireFormat * wireFormat, commands::DataStructure *
dataStructure, decaf::io::DataInputStream * dataIn, utils::BooleanStream
* bs) throw ( decaf::io::IOException ) [virtual]

```

Un-marshal an object instance from the data input stream.

Parameters:

wireFormat - describes the wire format of the broker.
dataStructure - Object to be un-marshaled.
dataIn - BinaryReader that provides that data.
bs - BooleanStream stream used to unpack bits from the wire.

Exceptions:

IOException if an error occurs during the unmarshal.

Reimplemented from `activemq::wireformat::openwire::marshal::v1::ActiveMQTempDestinationMarshaller` (p. 510).

The documentation for this class was generated from the following file:

6.85.3 Member Function Documentation

6.85.3.1 `virtual commands::DataStructure* activemq::wireformat::openwire::marshal::v4::ActiveMQTempTopicMarshaller::createObject() const` [virtual]

Creates a new instance of this marshalable type.

Returns:

new DataStructure object pointer caller owns it.

Implements `activemq::wireformat::openwire::marshal::DataStreamMarshaller` (p. 1419).

6.85.3.2 `virtual unsigned char activemq::wireformat::openwire::marshal::v4::ActiveMQTempTopicMarshaller::getDataStructureType() const` [virtual]

Get the Data Structure Type that identifies this Marshaler.

Returns:

byte holding the data structure type value

Implements `activemq::wireformat::openwire::marshal::DataStreamMarshaller` (p. 1424).

6.85.3.3 `virtual void activemq::wireformat::openwire::marshal::v4::ActiveMQTempTopicMarshaller::looseMarshal(OpenWireFormat * wireFormat, commands::DataStructure * dataStructure, decaf::io::DataOutputStream * dataOut) throw (decaf::io::IOException)` [virtual]

Write a object instance to data output stream.

Parameters:

wireFormat - describes the wire format of the broker

dataStructure - Object to be marshaled

dataOut - BinaryWriter that provides that data sink

Exceptions:

IOException if an error occurs during the marshal.

Reimplemented from `activemq::wireformat::openwire::marshal::v4::ActiveMQTempDestinationMarshaller` (p. 512).

6.85.3.4 `virtual void activemq::wireformat::openwire::marshal::v4::ActiveMQTempTopicMarshaller::looseUnmarshal (OpenWireFormat * wireFormat, commands::DataStructure * dataStructure, decaf::io::DataInputStream * dataIn) throw (decaf::io::IOException)` [virtual]

Un-marshal an object instance from the data input stream.

Parameters:

wireFormat - describes the wire format of the broker

dataStructure - Object to be marshaled

dataIn - BinaryReader that provides that data source

Exceptions:

IOException if an error occurs during the unmarshal.

Reimplemented from `activemq::wireformat::openwire::marshal::v4::ActiveMQTempDestinationMarshaller` (p. 512).

6.85.3.5 `virtual int activemq::wireformat::openwire::marshal::v4::ActiveMQTempTopicMarshaller::tightMarshal1 (OpenWireFormat * wireFormat, commands::DataStructure * dataStructure, utils::BooleanStream * bs) throw (decaf::io::IOException)` [virtual]

Write the booleans that this object uses to a BooleanStream.

Parameters:

wireFormat - describes the wire format of the broker

dataStructure - Object to be marshaled

bs - BooleanStream stream used to pack bits from the wire.

Returns:

int value indicating the size of the marshaled object.

Exceptions:

IOException if an error occurs during the marshal.

Reimplemented from `activemq::wireformat::openwire::marshal::v4::ActiveMQTempDestinationMarshaller` (p. 513).

```

6.85.3.6 virtual void ac-
tivemq::wireformat::openwire::marshal::v4::ActiveMQTempTopicMarshaller::tightMarshal2
(OpenWireFormat * wireFormat, commands::DataStructure
* dataStructure, decaf::io::DataOutputStream * dataOut,
utils::BooleanStream * bs) throw ( decaf::io::IOException ) [virtual]

```

Write a object instance to data output stream.

Parameters:

wireFormat - describes the wire format of the broker
dataStructure - Object to be marshaled
dataOut - BinaryReader that provides that data sink
bs - BooleanStream stream used to pack bits from the wire.

Exceptions:

IOException if an error occurs during the marshal.

Reimplemented from `activemq::wireformat::openwire::marshal::v4::ActiveMQTempDestinationMarshaller` (p. 513).

```

6.85.3.7 virtual void ac-
tivemq::wireformat::openwire::marshal::v4::ActiveMQTempTopicMarshaller::tightUnmarshal
(OpenWireFormat * wireFormat, commands::DataStructure *
dataStructure, decaf::io::DataInputStream * dataIn, utils::BooleanStream
* bs) throw ( decaf::io::IOException ) [virtual]

```

Un-marshall an object instance from the data input stream.

Parameters:

wireFormat - describes the wire format of the broker.
dataStructure - Object to be un-marshaled.
dataIn - BinaryReader that provides that data.
bs - BooleanStream stream used to unpack bits from the wire.

Exceptions:

IOException if an error occurs during the unmarshal.

Reimplemented from `activemq::wireformat::openwire::marshal::v4::ActiveMQTempDestinationMarshaller` (p. 514).

6.86.3 Member Function Documentation

6.86.3.1 `virtual commands::DataStructure* activemq::wireformat::openwire::marshal::v5::ActiveMQTempTopicMarshaller::createObject() const` [virtual]

Creates a new instance of this marshalable type.

Returns:

new DataStructure object pointer caller owns it.

Implements `activemq::wireformat::openwire::marshal::DataStreamMarshaller` (p. 1419).

6.86.3.2 `virtual unsigned char activemq::wireformat::openwire::marshal::v5::ActiveMQTempTopicMarshaller::getDataStructureType() const` [virtual]

Get the Data Structure Type that identifies this Marshaler.

Returns:

byte holding the data structure type value

Implements `activemq::wireformat::openwire::marshal::DataStreamMarshaller` (p. 1424).

6.86.3.3 `virtual void activemq::wireformat::openwire::marshal::v5::ActiveMQTempTopicMarshaller::looseMarshal(OpenWireFormat * wireFormat, commands::DataStructure * dataStructure, decaf::io::DataOutputStream * dataOut) throw (decaf::io::IOException)` [virtual]

Write a object instance to data output stream.

Parameters:

wireFormat - describes the wire format of the broker

dataStructure - Object to be marshaled

dataOut - BinaryWriter that provides that data sink

Exceptions:

IOException if an error occurs during the marshal.

Reimplemented from **activemq::wireformat::openwire::marshal::v5::ActiveMQTempDestinationMarshaller** (p. 516).

6.86.3.4 virtual void activemq::wireformat::openwire::marshal::v5::ActiveMQTempTopicMarshaller::looseUnmarshal (OpenWireFormat * *wireFormat*, commands::DataStructure * *dataStructure*, decaf::io::DataInputStream * *dataIn*) throw (decaf::io::IOException) [virtual]

Un-marshall an object instance from the data input stream.

Parameters:

wireFormat - describes the wire format of the broker

dataStructure - Object to be marshaled

dataIn - BinaryReader that provides that data source

Exceptions:

IOException if an error occurs during the unmarshal.

Reimplemented from **activemq::wireformat::openwire::marshal::v5::ActiveMQTempDestinationMarshaller** (p. 516).

6.86.3.5 virtual int activemq::wireformat::openwire::marshal::v5::ActiveMQTempTopicMarshaller::tightMarshal1 (OpenWireFormat * *wireFormat*, commands::DataStructure * *dataStructure*, utils::BooleanStream * *bs*) throw (decaf::io::IOException) [virtual]

Write the booleans that this object uses to a BooleanStream.

Parameters:

wireFormat - describes the wire format of the broker

dataStructure - Object to be marshaled

bs - BooleanStream stream used to pack bits from the wire.

Returns:

int value indicating the size of the marshaled object.

Exceptions:

IOException if an error occurs during the marshal.

Reimplemented from **activemq::wireformat::openwire::marshal::v5::ActiveMQTempDestinationMarshaller** (p. 517).

6.86.3.6 `virtual void activemq::wireformat::openwire::marshal::v5::ActiveMQTempTopicMarshaller::tightMarshal2(OpenWireFormat * wireFormat, commands::DataStructure * dataStructure, decaf::io::DataOutputStream * dataOut, utils::BooleanStream * bs) throw (decaf::io::IOException) [virtual]`

Write a object instance to data output stream.

Parameters:

wireFormat - describes the wire format of the broker
dataStructure - Object to be marshaled
dataOut - BinaryReader that provides that data sink
bs - BooleanStream stream used to pack bits from the wire.

Exceptions:

IOException if an error occurs during the marshal.

Reimplemented from `activemq::wireformat::openwire::marshal::v5::ActiveMQTempDestinationMarshaller` (p. 517).

6.86.3.7 `virtual void activemq::wireformat::openwire::marshal::v5::ActiveMQTempTopicMarshaller::tightUnmarshal(OpenWireFormat * wireFormat, commands::DataStructure * dataStructure, decaf::io::DataInputStream * dataIn, utils::BooleanStream * bs) throw (decaf::io::IOException) [virtual]`

Un-marshal an object instance from the data input stream.

Parameters:

wireFormat - describes the wire format of the broker.
dataStructure - Object to be un-marshaled.
dataIn - BinaryReader that provides that data.
bs - BooleanStream stream used to unpack bits from the wire.

Exceptions:

IOException if an error occurs during the unmarshal.

Reimplemented from `activemq::wireformat::openwire::marshal::v5::ActiveMQTempDestinationMarshaller` (p. 518).

6.87.3 Member Function Documentation

6.87.3.1 `virtual commands::DataStructure* activemq::wireformat::openwire::marshal::v2::ActiveMQTempTopicMarshaller::createObject() const` [virtual]

Creates a new instance of this marshalable type.

Returns:

new DataStructure object pointer caller owns it.

Implements `activemq::wireformat::openwire::marshal::DataStreamMarshaller` (p. 1419).

6.87.3.2 `virtual unsigned char activemq::wireformat::openwire::marshal::v2::ActiveMQTempTopicMarshaller::getDataStructureType() const` [virtual]

Get the Data Structure Type that identifies this Marshaler.

Returns:

byte holding the data structure type value

Implements `activemq::wireformat::openwire::marshal::DataStreamMarshaller` (p. 1424).

6.87.3.3 `virtual void activemq::wireformat::openwire::marshal::v2::ActiveMQTempTopicMarshaller::looseMarshal(OpenWireFormat * wireFormat, commands::DataStructure * dataStructure, decaf::io::DataOutputStream * dataOut) throw (decaf::io::IOException)` [virtual]

Write a object instance to data output stream.

Parameters:

wireFormat - describes the wire format of the broker

dataStructure - Object to be marshaled

dataOut - BinaryWriter that provides that data sink

Exceptions:

IOException if an error occurs during the marshal.

Reimplemented from **activemq::wireformat::openwire::marshal::v2::ActiveMQTempDestinationMarshaller** (p. 520).

6.87.3.4 virtual void activemq::wireformat::openwire::marshal::v2::ActiveMQTempTopicMarshaller::looseUnmarshal (OpenWireFormat * *wireFormat*, commands::DataStructure * *dataStructure*, decaf::io::DataInputStream * *dataIn*) throw (decaf::io::IOException) [virtual]

Un-marshall an object instance from the data input stream.

Parameters:

wireFormat - describes the wire format of the broker

dataStructure - Object to be marshaled

dataIn - BinaryReader that provides that data source

Exceptions:

IOException if an error occurs during the unmarshal.

Reimplemented from **activemq::wireformat::openwire::marshal::v2::ActiveMQTempDestinationMarshaller** (p. 520).

6.87.3.5 virtual int activemq::wireformat::openwire::marshal::v2::ActiveMQTempTopicMarshaller::tightMarshal1 (OpenWireFormat * *wireFormat*, commands::DataStructure * *dataStructure*, utils::BooleanStream * *bs*) throw (decaf::io::IOException) [virtual]

Write the booleans that this object uses to a BooleanStream.

Parameters:

wireFormat - describes the wire format of the broker

dataStructure - Object to be marshaled

bs - BooleanStream stream used to pack bits from the wire.

Returns:

int value indicating the size of the marshaled object.

Exceptions:

IOException if an error occurs during the marshal.

Reimplemented from **activemq::wireformat::openwire::marshal::v2::ActiveMQTempDestinationMarshaller** (p. 521).

```

6.87.3.6 virtual void ac-
          tivemq::wireformat::openwire::marshal::v2::ActiveMQTempTopicMarshaller::tightMarshal2
          (OpenWireFormat * wireFormat, commands::DataStructure
          * dataStructure, decaf::io::DataOutputStream * dataOut,
          utils::BooleanStream * bs) throw ( decaf::io::IOException ) [virtual]

```

Write a object instance to data output stream.

Parameters:

wireFormat - describes the wire format of the broker
dataStructure - Object to be marshaled
dataOut - BinaryReader that provides that data sink
bs - BooleanStream stream used to pack bits from the wire.

Exceptions:

IOException if an error occurs during the marshal.

Reimplemented from `activemq::wireformat::openwire::marshal::v2::ActiveMQTempDestinationMarshaller` (p. 521).

```

6.87.3.7 virtual void ac-
          tivemq::wireformat::openwire::marshal::v2::ActiveMQTempTopicMarshaller::tightUnmarshal
          (OpenWireFormat * wireFormat, commands::DataStructure *
          dataStructure, decaf::io::DataInputStream * dataIn, utils::BooleanStream
          * bs) throw ( decaf::io::IOException ) [virtual]

```

Un-marshall an object instance from the data input stream.

Parameters:

wireFormat - describes the wire format of the broker.
dataStructure - Object to be un-marshaled.
dataIn - BinaryReader that provides that data.
bs - BooleanStream stream used to unpack bits from the wire.

Exceptions:

IOException if an error occurs during the unmarshal.

Reimplemented from `activemq::wireformat::openwire::marshal::v2::ActiveMQTempDestinationMarshaller` (p. 522).

- virtual unsigned char **getDataStructureType** () const
Get the unique identifier that this object and its own Marshaler share.
- virtual **ActiveMQTextMessage * cloneDataStructure** () const
Clone this object and return a new instance that the caller now owns, this will be an exact copy of this one.
- virtual void **copyDataStructure** (const **DataStructure** *src)
Copy the contents of the passed object into this objects members, overwriting any existing data.
- virtual std::string **toString** () const
*Returns a string containing the information for this **DataStructure** (p. 1461) such as its type and value of its elements.*
- virtual bool **equals** (const **DataStructure** *value) const
*Compares the **DataStructure** (p. 1461) passed in to this one, and returns if they are equivalent.*
- virtual void **clearBody** () throw (cms::CMSException)
Clears out the body of the message.
- virtual void **beforeMarshal** (wireformat::WireFormat *wireFormat) throw (decaf::io::IOException)
*Performs any cleanup or other tasks that must be done before the **Message** (p. 2145) is marshalled to its binary WireFormat version.*
- virtual unsigned int **getSize** () const
Returns the Size of this message in Bytes.
- virtual cms::TextMessage * **clone** () const
Clone this message exactly, returns a new instance that the caller is required to delete.
- virtual std::string **getText** () const throw (cms::CMSException)
Gets the message character buffer.
- virtual void **setText** (const char *msg) throw (cms::MessageNotWriteableException, cms::CMSException)
Sets the message contents, does not take ownership of the passed char, but copies it instead.*

- virtual void **setText** (const std::string &msg) throw (cms::MessageNotWriteableException, cms::CMSException)

Sets the message contents.

6.88.1 Constructor & Destructor Documentation

6.88.1.1 `activemq::commands::ActiveMQTextMessage::ActiveMQTextMessage ()`

6.88.1.2 `virtual
activemq::commands::ActiveMQTextMessage::~~ActiveMQTextMessage ()
[virtual]`

6.88.2 Member Function Documentation

6.88.2.1 `virtual void activemq::commands::ActiveMQTextMessage::beforeMarshal
(wireformat::WireFormat * wireFormat) throw (decaf::io::IOException)
[virtual]`

Performs any cleanup or other tasks that must be done before the **Message** (p. 2145) is marshalled to its binary WireFormat version.

Parameters:

wireFormat the WireFormat instance that is marshalling this message.

Implements `activemq::wireformat::MarshalAware` (p. 2119).

6.88.2.2 `virtual void activemq::commands::ActiveMQTextMessage::clearBody ()
throw (cms::CMSException) [virtual]`

Clears out the body of the message. This does not clear the headers or properties.

Reimplemented from `activemq::commands::ActiveMQMessageTemplate< cms::TextMessage >` (p. 368).

6.88.2.3 `virtual cms::TextMessage* ac-
tivemq::commands::ActiveMQTextMessage::clone () const
[inline, virtual]`

Clone this message exactly, returns a new instance that the caller is required to delete.

Returns:

new copy of this message

Implements **cms::Message** (p. 2168).

6.88.2.4 virtual ActiveMQTextMessage* activemq::commands::ActiveMQTextMessage::cloneDataStructure () const [virtual]

Clone this object and return a new instance that the caller now owns, this will be an exact copy of this one.

Returns:

new copy of this object.

Reimplemented from **activemq::commands::Message** (p. 2149).

6.88.2.5 virtual void activemq::commands::ActiveMQTextMessage::copyDataStructure (const DataStructure * src) [virtual]

Copy the contents of the passed object into this objects members, overwriting any existing data.

Returns:

src - Source Object

Reimplemented from **activemq::commands::Message** (p. 2150).

6.88.2.6 virtual bool activemq::commands::ActiveMQTextMessage::equals (const DataStructure * value) const [virtual]

Compares the **DataStructure** (p. 1461) passed in to this one, and returns if they are equivalent. Equivalent here means that they are of the same type, and that each element of the objects are the same.

Returns:

true if DataStructure's are Equal.

Reimplemented from **activemq::commands::ActiveMQMessageTemplate< cms::TextMessage >** (p. 369).

6.88.2.7 virtual unsigned char activemq::commands::ActiveMQTextMessage::getDataStructureType () const [virtual]

Get the unique identifier that this object and its own Marshaler share.

Returns:

new **DataStructure** (p. 1461) type copy.

Reimplemented from **activemq::commands::Message** (p. 2152).

6.88.2.8 `virtual unsigned int activemq::commands::ActiveMQTextMessage::getSize
() const [virtual]`

Returns the Size of this message in Bytes.

Returns:

number of bytes this message equates to.

Reimplemented from `activemq::commands::Message` (p. 2154).

6.88.2.9 `virtual std::string activemq::commands::ActiveMQTextMessage::getText
() const throw (cms::CMSException) [virtual]`

Gets the message character buffer.

Returns:

The message character buffer.

Exceptions:

CMSException - if an internal error occurs.

Implements `cms::TextMessage` (p. 3170).

6.88.2.10 `virtual void activemq::commands::ActiveMQTextMessage::setText
(const std::string & msg) throw (cms::MessageNotWriteableException,
cms::CMSException) [virtual]`

Sets the message contents.

Parameters:

msg The message buffer.

Exceptions:

CMSException - if an internal error occurs.

MessageNotWriteableException - if the message is in read-only mode..

Implements `cms::TextMessage` (p. 3171).

6.88.2.11 `virtual void activemq::commands::ActiveMQTextMessage::setText
(const char * msg) throw (cms::MessageNotWriteableException,
cms::CMSException) [virtual]`

Sets the message contents, does not take ownership of the passed char*, but copies it instead.

Parameters:

msg The message buffer.

Exceptions:

CMSException - if an internal error occurs.

MessageNotWriteableException - if the message is in read-only mode..

Implements **cms::TextMessage** (p. 3171).

**6.88.2.12 virtual std::string activemq::commands::ActiveMQTextMessage::toString()
() const [virtual]**

Returns a string containing the information for this **DataSet** (p. 1461) such as its type and value of its elements.

Returns:

formatted string useful for debugging.

Reimplemented from **activemq::commands::Message** (p. 2159).

6.88.3 Field Documentation**6.88.3.1 const unsigned char activemq::commands::ActiveMQTextMessage::ID_ -

Get the Data Structure Type that identifies this Marshaler.
- virtual void **tightUnmarshal** (OpenWireFormat *wireFormat, **commands::DataStructure** *dataStructure, **decaf::io::DataInputStream** *dataIn, **utils::BooleanStream** *bs) throw (decaf::io::IOException)
Un-marshal an object instance from the data input stream.
- virtual int **tightMarshal** (OpenWireFormat *wireFormat, **commands::DataStructure** *dataStructure, **utils::BooleanStream** *bs) throw (decaf::io::IOException)
Write the booleans that this object uses to a BooleanStream.
- virtual void **tightMarshal2** (OpenWireFormat *wireFormat, **commands::DataStructure** *dataStructure, **decaf::io::DataOutputStream** *dataOut, **utils::BooleanStream** *bs) throw (decaf::io::IOException)
Write a object instance to data output stream.
- virtual void **looseUnmarshal** (OpenWireFormat *wireFormat, **commands::DataStructure** *dataStructure, **decaf::io::DataInputStream** *dataIn) throw (decaf::io::IOException)
Un-marshal an object instance from the data input stream.
- virtual void **looseMarshal** (OpenWireFormat *wireFormat, **commands::DataStructure** *dataStructure, **decaf::io::DataOutputStream** *dataOut) throw (decaf::io::IOException)
Write a object instance to data output stream.

6.89.1 Detailed Description

Marshaling code for Open Wire Format for **ActiveMQTextMessageMarshaller** (p. 578).

NOTE!: This file is auto generated - do not modify! if you need to make a change, please see the Java Classes in the activemq-openwire-generator module

6.89.2 Constructor & Destructor Documentation

6.89.2.1 `activemq::wireformat::openwire::marshal::v3::ActiveMQTextMessageMarshaller::ActiveMQTextMessageMarshaller()` [inline]

6.89.2.2 `virtual activemq::wireformat::openwire::marshal::v3::ActiveMQTextMessageMarshaller::~~ActiveMQTextMessageMarshaller()` [inline, virtual]

6.89.3 Member Function Documentation

6.89.3.1 `virtual commands::DataStructure* activemq::wireformat::openwire::marshal::v3::ActiveMQTextMessageMarshaller::createObject(const commands::DataStructure& dataStructure) const` [virtual]

Creates a new instance of this marshalable type.

Returns:

new DataStructure object pointer caller owns it.

Implements `activemq::wireformat::openwire::marshal::DataStreamMarshaller` (p. 1419).

6.89.3.2 `virtual unsigned char activemq::wireformat::openwire::marshal::v3::ActiveMQTextMessageMarshaller::getDataStructureType() const` [virtual]

Get the Data Structure Type that identifies this Marshaler.

Returns:

byte holding the data structure type value

Implements `activemq::wireformat::openwire::marshal::DataStreamMarshaller` (p. 1424).

6.89.3.3 `virtual void activemq::wireformat::openwire::marshal::v3::ActiveMQTextMessageMarshaller::looseMarshal(const commands::DataStructure& dataStructure, decaf::io::DataOutputStream* dataOut) throw (decaf::io::IOException)` [virtual]

Write a object instance to data output stream.

Parameters:

wireFormat - describes the wire format of the broker

dataStructure - Object to be marshaled

dataOut - BinaryWriter that provides that data sink

Exceptions:

IOException if an error occurs during the marshal.

Reimplemented from `activemq::wireformat::openwire::marshal::v3::MessageMarshaller` (p. 2316).

6.89.3.4 `virtual void activemq::wireformat::openwire::marshal::v3::ActiveMQTextMessageMarshaller::looseUnmarshal(OpenWireFormat * wireFormat, commands::DataStructure * dataStructure, decaf::io::DataInputStream * dataIn) throw (decaf::io::IOException)` [virtual]

Un-marshall an object instance from the data input stream.

Parameters:

wireFormat - describes the wire format of the broker

dataStructure - Object to be marshaled

dataIn - BinaryReader that provides that data source

Exceptions:

IOException if an error occurs during the unmarshal.

Reimplemented from `activemq::wireformat::openwire::marshal::v3::MessageMarshaller` (p. 2316).

6.89.3.5 `virtual int activemq::wireformat::openwire::marshal::v3::ActiveMQTextMessageMarshaller::tightMarshal(OpenWireFormat * wireFormat, commands::DataStructure * dataStructure, utils::BooleanStream * bs) throw (decaf::io::IOException)` [virtual]

Write the booleans that this object uses to a BooleanStream.

Parameters:

wireFormat - describes the wire format of the broker

dataStructure - Object to be marshaled

bs - BooleanStream stream used to pack bits from the wire.

Returns:

int value indicating the size of the marshaled object.

Exceptions:

IOException if an error occurs during the marshal.

Reimplemented from `activemq::wireformat::openwire::marshal::v3::MessageMarshaller` (p. 2317).

6.89.3.6 `virtual void activemq::wireformat::openwire::marshal::v3::ActiveMQTextMessageMarshaller::tightMarshal(OpenWireFormat * wireFormat, commands::DataStructure * dataStructure, decaf::io::DataOutputStream * dataOut, utils::BooleanStream * bs) throw (decaf::io::IOException)` [virtual]

Write a object instance to data output stream.

Parameters:

wireFormat - describes the wire format of the broker
dataStructure - Object to be marshaled
dataOut - BinaryReader that provides that data sink
bs - BooleanStream stream used to pack bits from the wire.

Exceptions:

IOException if an error occurs during the marshal.

Reimplemented from `activemq::wireformat::openwire::marshal::v3::MessageMarshaller` (p. 2318).

6.89.3.7 `virtual void activemq::wireformat::openwire::marshal::v3::ActiveMQTextMessageMarshaller::tightUnmarshal(OpenWireFormat * wireFormat, commands::DataStructure * dataStructure, decaf::io::DataInputStream * dataIn, utils::BooleanStream * bs) throw (decaf::io::IOException)` [virtual]

Un-marshall an object instance from the data input stream.

Parameters:

wireFormat - describes the wire format of the broker.
dataStructure - Object to be un-marshaled.
dataIn - BinaryReader that provides that data.
bs - BooleanStream stream used to unpack bits from the wire.

Exceptions:

IOException if an error occurs during the unmarshal.

Reimplemented from `activemq::wireformat::openwire::marshal::v3::MessageMarshaller` (p. 2318).

6.90.1 Detailed Description

Marshaling code for Open Wire Format for **ActiveMQTextMessageMarshaller** (p. 582).

NOTE!: This file is auto generated - do not modify! if you need to make a change, please see the Java Classes in the activemq-openwire-generator module

6.90.2 Constructor & Destructor Documentation

6.90.2.1 `activemq::wireformat::openwire::marshal::v1::ActiveMQTextMessageMarshaller::ActiveMQTextMessageMarshaller()` `[inline]`

6.90.2.2 `virtual activemq::wireformat::openwire::marshal::v1::ActiveMQTextMessageMarshaller::~~ActiveMQTextMessageMarshaller()` `[inline, virtual]`

6.90.3 Member Function Documentation

6.90.3.1 `virtual commands::DataStructure* activemq::wireformat::openwire::marshal::v1::ActiveMQTextMessageMarshaller::createObject(const std::string& name) const` `[virtual]`

Creates a new instance of this marshalable type.

Returns:

new DataStructure object pointer caller owns it.

Implements `activemq::wireformat::openwire::marshal::DataStreamMarshaller` (p. 1419).

6.90.3.2 `virtual unsigned char activemq::wireformat::openwire::marshal::v1::ActiveMQTextMessageMarshaller::getDataStructureType() const` `[virtual]`

Get the Data Structure Type that identifies this Marshaler.

Returns:

byte holding the data structure type value

Implements `activemq::wireformat::openwire::marshal::DataStreamMarshaller` (p. 1424).

6.90.3.3 `virtual void activemq::wireformat::openwire::marshal::v1::ActiveMQTextMessageMarshaller::looseMarshal(const commands::DataStructure* dataStructure, decaf::io::DataOutputStream* dataOut) throw (decaf::io::IOException)` `[virtual]`

Write a object instance to data output stream.

Parameters:

wireFormat - describes the wire format of the broker

dataStructure - Object to be marshaled

dataOut - BinaryWriter that provides that data sink

Exceptions:

IOException if an error occurs during the marshal.

Reimplemented from `activemq::wireformat::openwire::marshal::v1::MessageMarshaller` (p. 2326).

6.90.3.4 `virtual void activemq::wireformat::openwire::marshal::v1::ActiveMQTextMessageMarshaller::looseUnmarshal(OpenWireFormat * wireFormat, commands::DataStructure * dataStructure, decaf::io::DataInputStream * dataIn) throw (decaf::io::IOException)` [virtual]

Un-marshall an object instance from the data input stream.

Parameters:

wireFormat - describes the wire format of the broker

dataStructure - Object to be marshaled

dataIn - BinaryReader that provides that data source

Exceptions:

IOException if an error occurs during the unmarshal.

Reimplemented from `activemq::wireformat::openwire::marshal::v1::MessageMarshaller` (p. 2326).

6.90.3.5 `virtual int activemq::wireformat::openwire::marshal::v1::ActiveMQTextMessageMarshaller::tightMarshal(OpenWireFormat * wireFormat, commands::DataStructure * dataStructure, utils::BooleanStream * bs) throw (decaf::io::IOException)` [virtual]

Write the booleans that this object uses to a BooleanStream.

Parameters:

wireFormat - describes the wire format of the broker

dataStructure - Object to be marshaled

bs - BooleanStream stream used to pack bits from the wire.

Returns:

int value indicating the size of the marshaled object.

Exceptions:

IOException if an error occurs during the marshal.

Reimplemented from `activemq::wireformat::openwire::marshal::v1::MessageMarshaller` (p. 2327).

6.90.3.6 `virtual void activemq::wireformat::openwire::marshal::v1::ActiveMQTextMessageMarshaller::tightMarshal(OpenWireFormat * wireFormat, commands::DataStructure * dataStructure, decaf::io::DataOutputStream * dataOut, utils::BooleanStream * bs) throw (decaf::io::IOException)` [virtual]

Write a object instance to data output stream.

Parameters:

wireFormat - describes the wire format of the broker
dataStructure - Object to be marshaled
dataOut - BinaryReader that provides that data sink
bs - BooleanStream stream used to pack bits from the wire.

Exceptions:

IOException if an error occurs during the marshal.

Reimplemented from `activemq::wireformat::openwire::marshal::v1::MessageMarshaller` (p. 2328).

6.90.3.7 `virtual void activemq::wireformat::openwire::marshal::v1::ActiveMQTextMessageMarshaller::tightUnmarshal(OpenWireFormat * wireFormat, commands::DataStructure * dataStructure, decaf::io::DataInputStream * dataIn, utils::BooleanStream * bs) throw (decaf::io::IOException)` [virtual]

Un-marshall an object instance from the data input stream.

Parameters:

wireFormat - describes the wire format of the broker.
dataStructure - Object to be un-marshaled.
dataIn - BinaryReader that provides that data.
bs - BooleanStream stream used to unpack bits from the wire.

Exceptions:

IOException if an error occurs during the unmarshal.

Reimplemented from `activemq::wireformat::openwire::marshal::v1::MessageMarshaller` (p. 2328).

6.91.3 Member Function Documentation

6.91.3.1 `virtual commands::DataStructure* activemq::wireformat::openwire::marshal::v4::ActiveMQTextMessageMarshaller::createObject(const std::string& name) const` [virtual]

Creates a new instance of this marshalable type.

Returns:

new DataStructure object pointer caller owns it.

Implements `activemq::wireformat::openwire::marshal::DataStreamMarshaller` (p. 1419).

6.91.3.2 `virtual unsigned char activemq::wireformat::openwire::marshal::v4::ActiveMQTextMessageMarshaller::getDataStructureType() const` [virtual]

Get the Data Structure Type that identifies this Marshaler.

Returns:

byte holding the data structure type value

Implements `activemq::wireformat::openwire::marshal::DataStreamMarshaller` (p. 1424).

6.91.3.3 `virtual void activemq::wireformat::openwire::marshal::v4::ActiveMQTextMessageMarshaller::looseMarshal(commands::DataStructure* dataStructure, decaf::io::DataOutputStream* dataOut) throw (decaf::io::IOException)` [virtual]

Write a object instance to data output stream.

Parameters:

wireFormat - describes the wire format of the broker

dataStructure - Object to be marshaled

dataOut - BinaryWriter that provides that data sink

Exceptions:

IOException if an error occurs during the marshal.

Reimplemented from `activemq::wireformat::openwire::marshal::v4::MessageMarshaller` (p. 2311).

6.91.3.4 `virtual void activemq::wireformat::openwire::marshal::v4::ActiveMQTextMessageMarshaller::looseUnmarshal(OpenWireFormat * wireFormat, commands::DataStructure * dataStructure, decaf::io::DataInputStream * dataIn) throw (decaf::io::IOException)` [virtual]

Un-marshall an object instance from the data input stream.

Parameters:

wireFormat - describes the wire format of the broker

dataStructure - Object to be marshaled

dataIn - BinaryReader that provides that data source

Exceptions:

IOException if an error occurs during the unmarshal.

Reimplemented from `activemq::wireformat::openwire::marshal::v4::MessageMarshaller` (p. 2311).

6.91.3.5 `virtual int activemq::wireformat::openwire::marshal::v4::ActiveMQTextMessageMarshaller::tightMarshal(OpenWireFormat * wireFormat, commands::DataStructure * dataStructure, utils::BooleanStream * bs) throw (decaf::io::IOException)` [virtual]

Write the booleans that this object uses to a BooleanStream.

Parameters:

wireFormat - describes the wire format of the broker

dataStructure - Object to be marshaled

bs - BooleanStream stream used to pack bits from the wire.

Returns:

int value indicating the size of the marshaled object.

Exceptions:

IOException if an error occurs during the marshal.

Reimplemented from `activemq::wireformat::openwire::marshal::v4::MessageMarshaller` (p. 2312).

6.91.3.6 `virtual void activemq::wireformat::openwire::marshal::v4::ActiveMQTextMessageMarshaller::tightMarshal(OpenWireFormat * wireFormat, commands::DataStructure * dataStructure, decaf::io::DataOutputStream * dataOut, utils::BooleanStream * bs) throw (decaf::io::IOException)` [virtual]

Write a object instance to data output stream.

Parameters:

wireFormat - describes the wire format of the broker
dataStructure - Object to be marshaled
dataOut - BinaryReader that provides that data sink
bs - BooleanStream stream used to pack bits from the wire.

Exceptions:

IOException if an error occurs during the marshal.

Reimplemented from `activemq::wireformat::openwire::marshal::v4::MessageMarshaller` (p. 2313).

6.91.3.7 `virtual void activemq::wireformat::openwire::marshal::v4::ActiveMQTextMessageMarshaller::tightUnmarshal(OpenWireFormat * wireFormat, commands::DataStructure * dataStructure, decaf::io::DataInputStream * dataIn, utils::BooleanStream * bs) throw (decaf::io::IOException)` [virtual]

Un-marshall an object instance from the data input stream.

Parameters:

wireFormat - describes the wire format of the broker.
dataStructure - Object to be un-marshaled.
dataIn - BinaryReader that provides that data.
bs - BooleanStream stream used to unpack bits from the wire.

Exceptions:

IOException if an error occurs during the unmarshal.

Reimplemented from `activemq::wireformat::openwire::marshal::v4::MessageMarshaller` (p. 2313).

6.92.2.2 `virtual activemq::wireformat::openwire::marshal::v5::ActiveMQTextMessageMarshaller::~~ActiveMQTextMessageMarshaller()` [inline, virtual]

6.92.3 Member Function Documentation

6.92.3.1 `virtual commands::DataStructure* activemq::wireformat::openwire::marshal::v5::ActiveMQTextMessageMarshaller::createObject(const commands::DataStructure& dataStructure) const` [virtual]

Creates a new instance of this marshalable type.

Returns:

new DataStructure object pointer caller owns it.

Implements `activemq::wireformat::openwire::marshal::DataStreamMarshaller` (p. 1419).

6.92.3.2 `virtual unsigned char activemq::wireformat::openwire::marshal::v5::ActiveMQTextMessageMarshaller::getDataStructureType() const` [virtual]

Get the Data Structure Type that identifies this Marshaler.

Returns:

byte holding the data structure type value

Implements `activemq::wireformat::openwire::marshal::DataStreamMarshaller` (p. 1424).

6.92.3.3 `virtual void activemq::wireformat::openwire::marshal::v5::ActiveMQTextMessageMarshaller::looseMarshal(const commands::DataStructure& dataStructure, decaf::io::DataOutputStream* dataOut) throw (decaf::io::IOException)` [virtual]

Write a object instance to data output stream.

Parameters:

wireFormat - describes the wire format of the broker

dataStructure - Object to be marshaled

dataOut - BinaryWriter that provides that data sink

Exceptions:

IOException if an error occurs during the marshal.

Reimplemented from `activemq::wireformat::openwire::marshal::v5::MessageMarshaller` (p. 2321).

6.92.3.4 `virtual void activemq::wireformat::openwire::marshal::v5::ActiveMQTextMessageMarshaller::looseUnmarshal(OpenWireFormat * wireFormat, commands::DataStructure * dataStructure, decaf::io::DataInputStream * dataIn) throw (decaf::io::IOException)` [virtual]

Un-marshall an object instance from the data input stream.

Parameters:

wireFormat - describes the wire format of the broker

dataStructure - Object to be marshaled

dataIn - BinaryReader that provides that data source

Exceptions:

IOException if an error occurs during the unmarshal.

Reimplemented from `activemq::wireformat::openwire::marshal::v5::MessageMarshaller` (p. 2321).

6.92.3.5 `virtual int activemq::wireformat::openwire::marshal::v5::ActiveMQTextMessageMarshaller::tightMarshal(OpenWireFormat * wireFormat, commands::DataStructure * dataStructure, utils::BooleanStream * bs) throw (decaf::io::IOException)` [virtual]

Write the booleans that this object uses to a BooleanStream.

Parameters:

wireFormat - describes the wire format of the broker

dataStructure - Object to be marshaled

bs - BooleanStream stream used to pack bits from the wire.

Returns:

int value indicating the size of the marshaled object.

Exceptions:

IOException if an error occurs during the marshal.

Reimplemented from `activemq::wireformat::openwire::marshal::v5::MessageMarshaller` (p. 2322).

6.92.3.6 `virtual void activemq::wireformat::openwire::marshal::v5::ActiveMQTextMessageMarshaller::tightMarshal(OpenWireFormat * wireFormat, commands::DataStructure * dataStructure, decaf::io::DataOutputStream * dataOut, utils::BooleanStream * bs) throw (decaf::io::IOException)` [virtual]

Write a object instance to data output stream.

Parameters:

wireFormat - describes the wire format of the broker
dataStructure - Object to be marshaled
dataOut - BinaryReader that provides that data sink
bs - BooleanStream stream used to pack bits from the wire.

Exceptions:

IOException if an error occurs during the marshal.

Reimplemented from `activemq::wireformat::openwire::marshal::v5::MessageMarshaller` (p. 2323).

6.92.3.7 `virtual void activemq::wireformat::openwire::marshal::v5::ActiveMQTextMessageMarshaller::tightUnmarshal(OpenWireFormat * wireFormat, commands::DataStructure * dataStructure, decaf::io::DataInputStream * dataIn, utils::BooleanStream * bs) throw (decaf::io::IOException)` [virtual]

Un-marshall an object instance from the data input stream.

Parameters:

wireFormat - describes the wire format of the broker.
dataStructure - Object to be un-marshaled.
dataIn - BinaryReader that provides that data.
bs - BooleanStream stream used to unpack bits from the wire.

Exceptions:

IOException if an error occurs during the unmarshal.

Reimplemented from `activemq::wireformat::openwire::marshal::v5::MessageMarshaller` (p. 2323).

The documentation for this class was generated from the following file:

- `src/main/activemq/wireformat/openwire/marshal/v5/ActiveMQTextMessageMarshaller.h`

6.93 activemq::wireformat::openwire::marshal::v2::ActiveMQTextMessageMarshaller Class Reference

Marshaling code for Open Wire Format for **ActiveMQTextMessageMarshaller** (p. 594).

#include <src/main/activemq/wireformat/openwire/marshal/v2/ActiveMQTextMessageMarshaller.h> Inheritance diagram for activemq::wireformat::openwire::marshal::v2::ActiveMQTextMessageMarshaller:

Un-marshal an object instance from the data input stream.
- virtual void **looseMarshal** (**OpenWireFormat *wireFormat**, **commands::DataStructure *dataStructure**, **decaf::io::DataOutputStream *dataOut**) throw (**decaf::io::IOException**)
Write a object instance to data output stream.

6.93.1 Detailed Description

Marshaling code for Open Wire Format for **ActiveMQTextMessageMarshaller** (p. 594).

NOTE!: This file is auto generated - do not modify! if you need to make a change, please see the Java Classes in the activemq-openwire-generator module

6.93.2 Constructor & Destructor Documentation

6.93.2.1 `activemq::wireformat::openwire::marshal::v2::ActiveMQTextMessageMarshaller::ActiveMQTextMessageMarshaller()` [inline]

6.93.2.2 `virtual activemq::wireformat::openwire::marshal::v2::ActiveMQTextMessageMarshaller::~~ActiveMQTextMessageMarshaller()` [inline, virtual]

6.93.3 Member Function Documentation

6.93.3.1 `virtual commands::DataStructure* activemq::wireformat::openwire::marshal::v2::ActiveMQTextMessageMarshaller::createObject(const std::string& name) const` [virtual]

Creates a new instance of this marshalable type.

Returns:

new DataStructure object pointer caller owns it.

Implements `activemq::wireformat::openwire::marshal::DataStreamMarshaller` (p. 1419).

6.93.3.2 `virtual unsigned char activemq::wireformat::openwire::marshal::v2::ActiveMQTextMessageMarshaller::getDataStructureType() const` [virtual]

Get the Data Structure Type that identifies this Marshaler.

Returns:

byte holding the data structure type value

Implements `activemq::wireformat::openwire::marshal::DataStreamMarshaller` (p. 1424).

6.93.3.3 `virtual void activemq::wireformat::openwire::marshal::v2::ActiveMQTextMessageMarshaller::looseMarshal(commands::DataStructure* dataStructure, decaf::io::DataOutputStream* dataOut) throw (decaf::io::IOException)` [virtual]

Write a object instance to data output stream.

Parameters:

wireFormat - describes the wire format of the broker

dataStructure - Object to be marshaled

dataOut - BinaryWriter that provides that data sink

Exceptions:

IOException if an error occurs during the marshal.

Reimplemented from `activemq::wireformat::openwire::marshal::v2::MessageMarshaller` (p. 2306).

6.93.3.4 `virtual void activemq::wireformat::openwire::marshal::v2::ActiveMQTextMessageMarshaller::looseUnmarshal(OpenWireFormat * wireFormat, commands::DataStructure * dataStructure, decaf::io::DataInputStream * dataIn) throw (decaf::io::IOException)` [virtual]

Un-marshall an object instance from the data input stream.

Parameters:

wireFormat - describes the wire format of the broker

dataStructure - Object to be marshaled

dataIn - BinaryReader that provides that data source

Exceptions:

IOException if an error occurs during the unmarshal.

Reimplemented from `activemq::wireformat::openwire::marshal::v2::MessageMarshaller` (p. 2306).

6.93.3.5 `virtual int activemq::wireformat::openwire::marshal::v2::ActiveMQTextMessageMarshaller::tightMarshal(OpenWireFormat * wireFormat, commands::DataStructure * dataStructure, utils::BooleanStream * bs) throw (decaf::io::IOException)` [virtual]

Write the booleans that this object uses to a BooleanStream.

Parameters:

wireFormat - describes the wire format of the broker

dataStructure - Object to be marshaled

bs - BooleanStream stream used to pack bits from the wire.

Returns:

int value indicating the size of the marshaled object.

Exceptions:

IOException if an error occurs during the marshal.

Reimplemented from `activemq::wireformat::openwire::marshal::v2::MessageMarshaller` (p. 2307).

6.93.3.6 `virtual void activemq::wireformat::openwire::marshal::v2::ActiveMQTextMessageMarshaller::tightMarshal(OpenWireFormat * wireFormat, commands::DataStructure * dataStructure, decaf::io::DataOutputStream * dataOut, utils::BooleanStream * bs) throw (decaf::io::IOException) [virtual]`

Write a object instance to data output stream.

Parameters:

wireFormat - describes the wire format of the broker
dataStructure - Object to be marshaled
dataOut - BinaryReader that provides that data sink
bs - BooleanStream stream used to pack bits from the wire.

Exceptions:

IOException if an error occurs during the marshal.

Reimplemented from `activemq::wireformat::openwire::marshal::v2::MessageMarshaller` (p. 2308).

6.93.3.7 `virtual void activemq::wireformat::openwire::marshal::v2::ActiveMQTextMessageMarshaller::tightUnmarshal(OpenWireFormat * wireFormat, commands::DataStructure * dataStructure, decaf::io::DataInputStream * dataIn, utils::BooleanStream * bs) throw (decaf::io::IOException) [virtual]`

Un-marshall an object instance from the data input stream.

Parameters:

wireFormat - describes the wire format of the broker.
dataStructure - Object to be un-marshaled.
dataIn - BinaryReader that provides that data.
bs - BooleanStream stream used to unpack bits from the wire.

Exceptions:

IOException if an error occurs during the unmarshal.

Reimplemented from `activemq::wireformat::openwire::marshal::v2::MessageMarshaller` (p. 2308).

Public Member Functions

- **ActiveMQTopic** ()
- **ActiveMQTopic** (const std::string &name)
- virtual ~**ActiveMQTopic** ()
- virtual unsigned char **getDataStructureType** () const
*Get the **DataStructure** (p. 1461) Type as defined in CommandTypes.h.*
- virtual **ActiveMQTopic** * **cloneDataStructure** () const
Clone this object and return a new instance that the caller now owns, this will be an exact copy of this one.
- virtual void **copyDataStructure** (const **DataStructure** *src)
Copy the contents of the passed object into this objects members, overwriting any existing data.
- virtual std::string **toString** () const
*Returns a string containing the information for this **DataStructure** (p. 1461) such as its type and value of its elements.*
- virtual bool **equals** (const **DataStructure** *value) const
*Compares the **DataStructure** (p. 1461) passed in to this one, and returns if they are equivalent.*
- virtual const cms::Destination * **getCMSDestination** () const
- virtual cms::Destination::DestinationType **getDestinationType** () const
Retrieve the Destination Type for this Destination.
- virtual cms::Destination * **clone** () const
Creates a new instance of this destination type that is a copy of this one, and returns it.
- virtual void **copy** (const cms::Destination &source)
Copies the contents of the given Destination object to this one.
- virtual const cms::CMSProperties & **getCMSProperties** () const
Retrieve any properties that might be part of the destination that was specified.
- virtual std::string **getTopicName** () const throw (cms::CMSException)
Gets the name of this topic.

Static Public Attributes

- static const unsigned char **ID_ACTIVEMQTOPIC** = 101

6.94.1 Constructor & Destructor Documentation

6.94.1.1 `activemq::commands::ActiveMQTopic::ActiveMQTopic ()`

6.94.1.2 `activemq::commands::ActiveMQTopic::ActiveMQTopic (const std::string & name)`

6.94.1.3 `virtual activemq::commands::ActiveMQTopic::~~ActiveMQTopic ()`
[virtual]

6.94.2 Member Function Documentation

6.94.2.1 `virtual cms::Destination* activemq::commands::ActiveMQTopic::clone ()`
`const` [inline, virtual]

Creates a new instance of this destination type that is a copy of this one, and returns it.

Returns:

cloned copy of this object

Implements **cms::Destination** (p. 1481).

6.94.2.2 `virtual ActiveMQTopic* activemq::commands::ActiveMQTopic::cloneDataStructure ()`
`const` [virtual]

Clone this object and return a new instance that the caller now owns, this will be an exact copy of this one.

Returns:

new copy of this object.

Reimplemented from **activemq::commands::ActiveMQDestination** (p. 276).

6.94.2.3 `virtual void activemq::commands::ActiveMQTopic::copy (const cms::Destination & source)` [inline, virtual]

Copies the contents of the given Destination object to this one.

Parameters:

source The source Destination object.

Implements **cms::Destination** (p. 1481).

6.94.2.4 `virtual void activemq::commands::ActiveMQTopic::copyDataStructure (const DataStructure * src)` [virtual]

Copy the contents of the passed object into this objects members, overwriting any existing data.

Returns:

src - Source Object

Reimplemented from **activemq::commands::ActiveMQDestination** (p. 277).

6.94.2.5 `virtual bool activemq::commands::ActiveMQTopic::equals (const DataStructure * value) const [inline, virtual]`

Compares the **DataStructure** (p. 1461) passed in to this one, and returns if they are equivalent. Equivalent here means that they are of the same type, and that each element of the objects are the same.

Returns:

true if DataStructure's are Equal.

Reimplemented from **activemq::commands::ActiveMQDestination** (p. 278).

References **activemq::commands::ActiveMQDestination::equals()**.

6.94.2.6 `virtual const cms::Destination* activemq::commands::ActiveMQTopic::getCMSDestination () const [inline, virtual]`

Returns:

the **cms::Destination** (p. 1480) interface pointer that the objects that derive from this class implement.

Reimplemented from **activemq::commands::ActiveMQDestination** (p. 278).

6.94.2.7 `virtual const cms::CMSProperties& activemq::commands::ActiveMQTopic::getCMSProperties () const [inline, virtual]`

Retrieve any properties that might be part of the destination that was specified. This is a deviation from the JMS spec but necessary due to C++ restrictions.

Returns:

const reference to a properties object.

Implements **cms::Destination** (p. 1481).

6.94.2.8 `virtual unsigned char activemq::commands::ActiveMQTopic::getDataStructureType () const [virtual]`

Get the **DataStructure** (p. 1461) Type as defined in CommandTypes.h.

Returns:

The type of the data structure

Reimplemented from **activemq::commands::ActiveMQDestination** (p. 278).

6.94.2.9 `virtual cms::Destination::DestinationType activemq::commands::ActiveMQTopic::getDestinationType () const [inline, virtual]`

Retrieve the Destination Type for this Destination.

Returns:

The Destination Type

Implements **activemq::commands::ActiveMQDestination** (p. 279).

References **cms::Destination::TOPIC**.

6.94.2.10 `virtual std::string activemq::commands::ActiveMQTopic::getTopicName () const throw (cms::CMSEException) [inline, virtual]`

Gets the name of this topic.

Returns:

The topic name.

Implements **cms::Topic** (p. 3215).

6.94.2.11 `virtual std::string activemq::commands::ActiveMQTopic::toString () const [virtual]`

Returns a string containing the information for this **DataStructure** (p. 1461) such as its type and value of its elements.

Returns:

formatted string useful for debugging.

Reimplemented from **activemq::commands::ActiveMQDestination** (p. 282).

6.94.3 Field Documentation

6.94.3.1 `const unsigned char activemq::commands::ActiveMQTopic::ID_ - ACTIVEMQTOPIC = 101 [static]`

The documentation for this class was generated from the following file:

- `src/main/activemq/commands/ActiveMQTopic.h`

6.95 activemq::wireformat::openwire::marshal::v3::ActiveMQTopicMarshaller Class Reference

Marshaling code for Open Wire Format for **ActiveMQTopicMarshaller** (p. 602).

#include <src/main/activemq/wireformat/openwire/marshal/v3/ActiveMQTopicMarshaller.h>Inheritance diagram for activemq::wireformat::openwire::marshal::v3::ActiveMQTopicMarshaller:

Write the booleans that this object uses to a BooleanStream.
- virtual void **tightMarshal2** (**OpenWireFormat *wireFormat**, **commands::DataStructure *dataStructure**, **decaf::io::DataOutputStream *dataOut**, **utils::BooleanStream *bs**) throw (**decaf::io::IOException**)
Write a object instance to data output stream.
- virtual void **looseUnmarshal** (**OpenWireFormat *wireFormat**, **commands::DataStructure *dataStructure**, **decaf::io::DataInputStream *dataIn**) throw (**decaf::io::IOException**)
Un-marshal an object instance from the data input stream.
- virtual void **looseMarshal** (**OpenWireFormat *wireFormat**, **commands::DataStructure *dataStructure**, **decaf::io::DataOutputStream *dataOut**) throw (**decaf::io::IOException**)
Write a object instance to data output stream.

6.95.1 Detailed Description

Marshaling code for Open Wire Format for **ActiveMQTopicMarshaller** (p. 602). NOTE!: This file is auto generated - do not modify! if you need to make a change, please see the Java Classes in the activemq-openwire-generator module

6.95.2 Constructor & Destructor Documentation

6.95.2.1 `activemq::wireformat::openwire::marshal::v3::ActiveMQTopicMarshaller::ActiveMQTopicMarshaller()` [inline]

6.95.2.2 `virtual activemq::wireformat::openwire::marshal::v3::ActiveMQTopicMarshaller::~~ActiveMQTopicMarshaller()` [inline, virtual]

6.95.3 Member Function Documentation

6.95.3.1 `virtual commands::DataStructure* activemq::wireformat::openwire::marshal::v3::ActiveMQTopicMarshaller::createObject()` const [virtual]

Creates a new instance of this marshalable type.

Returns:

new DataStructure object pointer caller owns it.

Implements `activemq::wireformat::openwire::marshal::DataStreamMarshaller` (p. 1419).

6.95.3.2 `virtual unsigned char activemq::wireformat::openwire::marshal::v3::ActiveMQTopicMarshaller::getDataStructureType()` const [virtual]

Get the Data Structure Type that identifies this Marshaler.

Returns:

byte holding the data structure type value

Implements `activemq::wireformat::openwire::marshal::DataStreamMarshaller` (p. 1424).

6.95.3.3 `virtual void activemq::wireformat::openwire::marshal::v3::ActiveMQTopicMarshaller::looseMarshal(OpenWireFormat * wireFormat, commands::DataStructure * dataStructure, decaf::io::DataOutputStream * dataOut) throw (decaf::io::IOException)` [virtual]

Write a object instance to data output stream.

Parameters:

wireFormat - describes the wire format of the broker

dataStructure - Object to be marshaled

dataOut - BinaryWriter that provides that data sink

Exceptions:

IOException if an error occurs during the marshal.

Reimplemented from `activemq::wireformat::openwire::marshal::v3::ActiveMQDestinationMarshaller` (p. 286).

6.95.3.4 `virtual void activemq::wireformat::openwire::marshal::v3::ActiveMQTopicMarshaller::looseUnmarshal (OpenWireFormat * wireFormat, commands::DataStructure * dataStructure, decaf::io::DataInputStream * dataIn) throw (decaf::io::IOException)` [virtual]

Un-marshall an object instance from the data input stream.

Parameters:

wireFormat - describes the wire format of the broker

dataStructure - Object to be marshaled

dataIn - BinaryReader that provides that data source

Exceptions:

IOException if an error occurs during the unmarshal.

Reimplemented from `activemq::wireformat::openwire::marshal::v3::ActiveMQDestinationMarshaller` (p. 286).

6.95.3.5 `virtual int activemq::wireformat::openwire::marshal::v3::ActiveMQTopicMarshaller::tightMarshal1 (OpenWireFormat * wireFormat, commands::DataStructure * dataStructure, utils::BooleanStream * bs) throw (decaf::io::IOException)` [virtual]

Write the booleans that this object uses to a BooleanStream.

Parameters:

wireFormat - describes the wire format of the broker

dataStructure - Object to be marshaled

bs - BooleanStream stream used to pack bits from the wire.

Returns:

int value indicating the size of the marshaled object.

Exceptions:

IOException if an error occurs during the marshal.

Reimplemented from `activemq::wireformat::openwire::marshal::v3::ActiveMQDestinationMarshaller` (p. 287).

6.95.3.6 `virtual void activemq::wireformat::openwire::marshal::v3::ActiveMQTopicMarshaller::tightMarshal2 (OpenWireFormat * wireFormat, commands::DataStructure * dataStructure, decaf::io::DataOutputStream * dataOut, utils::BooleanStream * bs) throw (decaf::io::IOException) [virtual]`

Write a object instance to data output stream.

Parameters:

wireFormat - describes the wire format of the broker
dataStructure - Object to be marshaled
dataOut - BinaryReader that provides that data sink
bs - BooleanStream stream used to pack bits from the wire.

Exceptions:

IOException if an error occurs during the marshal.

Reimplemented from `activemq::wireformat::openwire::marshal::v3::ActiveMQDestinationMarshaller` (p. 287).

6.95.3.7 `virtual void activemq::wireformat::openwire::marshal::v3::ActiveMQTopicMarshaller::tightUnmarshal (OpenWireFormat * wireFormat, commands::DataStructure * dataStructure, decaf::io::DataInputStream * dataIn, utils::BooleanStream * bs) throw (decaf::io::IOException) [virtual]`

Un-marshall an object instance from the data input stream.

Parameters:

wireFormat - describes the wire format of the broker.
dataStructure - Object to be un-marshaled.
dataIn - BinaryReader that provides that data.
bs - BooleanStream stream used to unpack bits from the wire.

Exceptions:

IOException if an error occurs during the unmarshal.

Reimplemented from `activemq::wireformat::openwire::marshal::v3::ActiveMQDestinationMarshaller` (p. 288).

The documentation for this class was generated from the following file:

6.96.1 Detailed Description

Marshaling code for Open Wire Format for **ActiveMQTopicMarshaller** (p. 606). NOTE!: This file is auto generated - do not modify! if you need to make a change, please see the Java Classes in the activemq-openwire-generator module

6.96.2 Constructor & Destructor Documentation

6.96.2.1 `activemq::wireformat::openwire::marshal::v1::ActiveMQTopicMarshaller::ActiveMQTopicMarshaller()` `[inline]`

6.96.2.2 `virtual activemq::wireformat::openwire::marshal::v1::ActiveMQTopicMarshaller::~~ActiveMQTopicMarshaller()` `[inline, virtual]`

6.96.3 Member Function Documentation

6.96.3.1 `virtual commands::DataStructure* activemq::wireformat::openwire::marshal::v1::ActiveMQTopicMarshaller::createObject()` `const` `[virtual]`

Creates a new instance of this marshalable type.

Returns:

new DataStructure object pointer caller owns it.

Implements `activemq::wireformat::openwire::marshal::DataStreamMarshaller` (p. 1419).

6.96.3.2 `virtual unsigned char activemq::wireformat::openwire::marshal::v1::ActiveMQTopicMarshaller::getDataStructureType()` `const` `[virtual]`

Get the Data Structure Type that identifies this Marshaler.

Returns:

byte holding the data structure type value

Implements `activemq::wireformat::openwire::marshal::DataStreamMarshaller` (p. 1424).

6.96.3.3 `virtual void activemq::wireformat::openwire::marshal::v1::ActiveMQTopicMarshaller::looseMarshal(OpenWireFormat * wireFormat, commands::DataStructure * dataStructure, decaf::io::DataOutputStream * dataOut) throw (decaf::io::IOException)` `[virtual]`

Write a object instance to data output stream.

Parameters:

wireFormat - describes the wire format of the broker

dataStructure - Object to be marshaled

dataOut - BinaryWriter that provides that data sink

Exceptions:

IOException if an error occurs during the marshal.

Reimplemented from `activemq::wireformat::openwire::marshal::v1::ActiveMQDestinationMarshaller` (p. 290).

6.96.3.4 `virtual void activemq::wireformat::openwire::marshal::v1::ActiveMQTopicMarshaller::looseUnmarshal (OpenWireFormat * wireFormat, commands::DataStructure * dataStructure, decaf::io::DataInputStream * dataIn) throw (decaf::io::IOException)` [virtual]

Un-marshall an object instance from the data input stream.

Parameters:

wireFormat - describes the wire format of the broker

dataStructure - Object to be marshaled

dataIn - BinaryReader that provides that data source

Exceptions:

IOException if an error occurs during the unmarshal.

Reimplemented from `activemq::wireformat::openwire::marshal::v1::ActiveMQDestinationMarshaller` (p. 290).

6.96.3.5 `virtual int activemq::wireformat::openwire::marshal::v1::ActiveMQTopicMarshaller::tightMarshal1 (OpenWireFormat * wireFormat, commands::DataStructure * dataStructure, utils::BooleanStream * bs) throw (decaf::io::IOException)` [virtual]

Write the booleans that this object uses to a BooleanStream.

Parameters:

wireFormat - describes the wire format of the broker

dataStructure - Object to be marshaled

bs - BooleanStream stream used to pack bits from the wire.

Returns:

int value indicating the size of the marshaled object.

Exceptions:

IOException if an error occurs during the marshal.

Reimplemented from `activemq::wireformat::openwire::marshal::v1::ActiveMQDestinationMarshaller` (p. 291).

6.96.3.6 `virtual void activemq::wireformat::openwire::marshal::v1::ActiveMQTopicMarshaller::tightMarshal2 (OpenWireFormat * wireFormat, commands::DataStructure * dataStructure, decaf::io::DataOutputStream * dataOut, utils::BooleanStream * bs) throw (decaf::io::IOException) [virtual]`

Write a object instance to data output stream.

Parameters:

wireFormat - describes the wire format of the broker
dataStructure - Object to be marshaled
dataOut - BinaryReader that provides that data sink
bs - BooleanStream stream used to pack bits from the wire.

Exceptions:

IOException if an error occurs during the marshal.

Reimplemented from `activemq::wireformat::openwire::marshal::v1::ActiveMQDestinationMarshaller` (p. 291).

6.96.3.7 `virtual void activemq::wireformat::openwire::marshal::v1::ActiveMQTopicMarshaller::tightUnmarshal (OpenWireFormat * wireFormat, commands::DataStructure * dataStructure, decaf::io::DataInputStream * dataIn, utils::BooleanStream * bs) throw (decaf::io::IOException) [virtual]`

Un-marshall an object instance from the data input stream.

Parameters:

wireFormat - describes the wire format of the broker.
dataStructure - Object to be un-marshaled.
dataIn - BinaryReader that provides that data.
bs - BooleanStream stream used to unpack bits from the wire.

Exceptions:

IOException if an error occurs during the unmarshal.

Reimplemented from `activemq::wireformat::openwire::marshal::v1::ActiveMQDestinationMarshaller` (p. 292).

6.97.1 Detailed Description

Marshaling code for Open Wire Format for **ActiveMQTopicMarshaller** (p. 610). NOTE!: This file is auto generated - do not modify! if you need to make a change, please see the Java Classes in the activemq-openwire-generator module

6.97.2 Constructor & Destructor Documentation

6.97.2.1 `activemq::wireformat::openwire::marshal::v4::ActiveMQTopicMarshaller::ActiveMQTopicMarshaller()` `[inline]`

6.97.2.2 `virtual activemq::wireformat::openwire::marshal::v4::ActiveMQTopicMarshaller::~~ActiveMQTopicMarshaller()` `[inline, virtual]`

6.97.3 Member Function Documentation

6.97.3.1 `virtual commands::DataStructure* activemq::wireformat::openwire::marshal::v4::ActiveMQTopicMarshaller::createObject()` `const` `[virtual]`

Creates a new instance of this marshalable type.

Returns:

new DataStructure object pointer caller owns it.

Implements `activemq::wireformat::openwire::marshal::DataStreamMarshaller` (p. 1419).

6.97.3.2 `virtual unsigned char activemq::wireformat::openwire::marshal::v4::ActiveMQTopicMarshaller::getDataStructureType()` `const` `[virtual]`

Get the Data Structure Type that identifies this Marshaler.

Returns:

byte holding the data structure type value

Implements `activemq::wireformat::openwire::marshal::DataStreamMarshaller` (p. 1424).

6.97.3.3 `virtual void activemq::wireformat::openwire::marshal::v4::ActiveMQTopicMarshaller::looseMarshal(OpenWireFormat * wireFormat, commands::DataStructure * dataStructure, decaf::io::DataOutputStream * dataOut) throw (decaf::io::IOException)` `[virtual]`

Write a object instance to data output stream.

Parameters:

wireFormat - describes the wire format of the broker

dataStructure - Object to be marshaled

dataOut - BinaryWriter that provides that data sink

Exceptions:

IOException if an error occurs during the marshal.

Reimplemented from `activemq::wireformat::openwire::marshal::v4::ActiveMQDestinationMarshaller` (p. 294).

6.97.3.4 `virtual void activemq::wireformat::openwire::marshal::v4::ActiveMQTopicMarshaller::looseUnmarshal (OpenWireFormat * wireFormat, commands::DataStructure * dataStructure, decaf::io::DataInputStream * dataIn) throw (decaf::io::IOException)` [virtual]

Un-marshall an object instance from the data input stream.

Parameters:

wireFormat - describes the wire format of the broker

dataStructure - Object to be marshaled

dataIn - BinaryReader that provides that data source

Exceptions:

IOException if an error occurs during the unmarshal.

Reimplemented from `activemq::wireformat::openwire::marshal::v4::ActiveMQDestinationMarshaller` (p. 294).

6.97.3.5 `virtual int activemq::wireformat::openwire::marshal::v4::ActiveMQTopicMarshaller::tightMarshal1 (OpenWireFormat * wireFormat, commands::DataStructure * dataStructure, utils::BooleanStream * bs) throw (decaf::io::IOException)` [virtual]

Write the booleans that this object uses to a BooleanStream.

Parameters:

wireFormat - describes the wire format of the broker

dataStructure - Object to be marshaled

bs - BooleanStream stream used to pack bits from the wire.

Returns:

int value indicating the size of the marshaled object.

Exceptions:

IOException if an error occurs during the marshal.

Reimplemented from `activemq::wireformat::openwire::marshal::v4::ActiveMQDestinationMarshaller` (p. 295).

6.97.3.6 `virtual void activemq::wireformat::openwire::marshal::v4::ActiveMQTopicMarshaller::tightMarshal2 (OpenWireFormat * wireFormat, commands::DataStructure * dataStructure, decaf::io::DataOutputStream * dataOut, utils::BooleanStream * bs) throw (decaf::io::IOException) [virtual]`

Write a object instance to data output stream.

Parameters:

wireFormat - describes the wire format of the broker
dataStructure - Object to be marshaled
dataOut - BinaryReader that provides that data sink
bs - BooleanStream stream used to pack bits from the wire.

Exceptions:

IOException if an error occurs during the marshal.

Reimplemented from `activemq::wireformat::openwire::marshal::v4::ActiveMQDestinationMarshaller` (p. 295).

6.97.3.7 `virtual void activemq::wireformat::openwire::marshal::v4::ActiveMQTopicMarshaller::tightUnmarshal (OpenWireFormat * wireFormat, commands::DataStructure * dataStructure, decaf::io::DataInputStream * dataIn, utils::BooleanStream * bs) throw (decaf::io::IOException) [virtual]`

Un-marshal an object instance from the data input stream.

Parameters:

wireFormat - describes the wire format of the broker.
dataStructure - Object to be un-marshaled.
dataIn - BinaryReader that provides that data.
bs - BooleanStream stream used to unpack bits from the wire.

Exceptions:

IOException if an error occurs during the unmarshal.

Reimplemented from `activemq::wireformat::openwire::marshal::v4::ActiveMQDestinationMarshaller` (p. 296).

6.98.2 Constructor & Destructor Documentation

6.98.2.1 `activemq::wireformat::openwire::marshal::v5::ActiveMQTopicMarshaller::ActiveMQTopicMarshaller()` [inline]

6.98.2.2 `virtual activemq::wireformat::openwire::marshal::v5::ActiveMQTopicMarshaller::~~ActiveMQTopicMarshaller()` [inline, virtual]

6.98.3 Member Function Documentation

6.98.3.1 `virtual commands::DataStructure* activemq::wireformat::openwire::marshal::v5::ActiveMQTopicMarshaller::createObject()` const [virtual]

Creates a new instance of this marshalable type.

Returns:

new DataStructure object pointer caller owns it.

Implements `activemq::wireformat::openwire::marshal::DataStreamMarshaller` (p. 1419).

6.98.3.2 `virtual unsigned char activemq::wireformat::openwire::marshal::v5::ActiveMQTopicMarshaller::getDataStructureType()` const [virtual]

Get the Data Structure Type that identifies this Marshaler.

Returns:

byte holding the data structure type value

Implements `activemq::wireformat::openwire::marshal::DataStreamMarshaller` (p. 1424).

6.98.3.3 `virtual void activemq::wireformat::openwire::marshal::v5::ActiveMQTopicMarshaller::looseMarshal(OpenWireFormat * wireFormat, commands::DataStructure * dataStructure, decaf::io::DataOutputStream * dataOut) throw (decaf::io::IOException)` [virtual]

Write a object instance to data output stream.

Parameters:

wireFormat - describes the wire format of the broker

dataStructure - Object to be marshaled

dataOut - BinaryWriter that provides that data sink

Exceptions:

IOException if an error occurs during the marshal.

Reimplemented from `activemq::wireformat::openwire::marshal::v5::ActiveMQDestinationMarshaller` (p. 298).

6.98.3.4 `virtual void activemq::wireformat::openwire::marshal::v5::ActiveMQTopicMarshaller::looseUnmarshal (OpenWireFormat * wireFormat, commands::DataStructure * dataStructure, decaf::io::DataInputStream * dataIn) throw (decaf::io::IOException)` [virtual]

Un-marshall an object instance from the data input stream.

Parameters:

wireFormat - describes the wire format of the broker

dataStructure - Object to be marshaled

dataIn - BinaryReader that provides that data source

Exceptions:

IOException if an error occurs during the unmarshal.

Reimplemented from `activemq::wireformat::openwire::marshal::v5::ActiveMQDestinationMarshaller` (p. 298).

6.98.3.5 `virtual int activemq::wireformat::openwire::marshal::v5::ActiveMQTopicMarshaller::tightMarshal1 (OpenWireFormat * wireFormat, commands::DataStructure * dataStructure, utils::BooleanStream * bs) throw (decaf::io::IOException)` [virtual]

Write the booleans that this object uses to a BooleanStream.

Parameters:

wireFormat - describes the wire format of the broker

dataStructure - Object to be marshaled

bs - BooleanStream stream used to pack bits from the wire.

Returns:

int value indicating the size of the marshaled object.

Exceptions:

IOException if an error occurs during the marshal.

Reimplemented from `activemq::wireformat::openwire::marshal::v5::ActiveMQDestinationMarshaller` (p. 299).

6.98.3.6 `virtual void activemq::wireformat::openwire::marshal::v5::ActiveMQTopicMarshaller::tightMarshal2 (OpenWireFormat * wireFormat, commands::DataStructure * dataStructure, decaf::io::DataOutputStream * dataOut, utils::BooleanStream * bs) throw (decaf::io::IOException) [virtual]`

Write a object instance to data output stream.

Parameters:

wireFormat - describes the wire format of the broker
dataStructure - Object to be marshaled
dataOut - BinaryReader that provides that data sink
bs - BooleanStream stream used to pack bits from the wire.

Exceptions:

IOException if an error occurs during the marshal.

Reimplemented from `activemq::wireformat::openwire::marshal::v5::ActiveMQDestinationMarshaller` (p. 299).

6.98.3.7 `virtual void activemq::wireformat::openwire::marshal::v5::ActiveMQTopicMarshaller::tightUnmarshal (OpenWireFormat * wireFormat, commands::DataStructure * dataStructure, decaf::io::DataInputStream * dataIn, utils::BooleanStream * bs) throw (decaf::io::IOException) [virtual]`

Un-marshal an object instance from the data input stream.

Parameters:

wireFormat - describes the wire format of the broker.
dataStructure - Object to be un-marshaled.
dataIn - BinaryReader that provides that data.
bs - BooleanStream stream used to unpack bits from the wire.

Exceptions:

IOException if an error occurs during the unmarshal.

Reimplemented from `activemq::wireformat::openwire::marshal::v5::ActiveMQDestinationMarshaller` (p. 300).

6.99.3 Member Function Documentation

6.99.3.1 `virtual commands::DataStructure* activemq::wireformat::openwire::marshal::v2::ActiveMQTopicMarshaller::createObject()` `const` `[virtual]`

Creates a new instance of this marshalable type.

Returns:

new DataStructure object pointer caller owns it.

Implements `activemq::wireformat::openwire::marshal::DataStreamMarshaller` (p. 1419).

6.99.3.2 `virtual unsigned char activemq::wireformat::openwire::marshal::v2::ActiveMQTopicMarshaller::getDataStructureType()` `const` `[virtual]`

Get the Data Structure Type that identifies this Marshaler.

Returns:

byte holding the data structure type value

Implements `activemq::wireformat::openwire::marshal::DataStreamMarshaller` (p. 1424).

6.99.3.3 `virtual void activemq::wireformat::openwire::marshal::v2::ActiveMQTopicMarshaller::looseMarshal(OpenWireFormat * wireFormat, commands::DataStructure * dataStructure, decaf::io::DataOutputStream * dataOut) throw (decaf::io::IOException)` `[virtual]`

Write a object instance to data output stream.

Parameters:

wireFormat - describes the wire format of the broker

dataStructure - Object to be marshaled

dataOut - BinaryWriter that provides that data sink

Exceptions:

IOException if an error occurs during the marshal.

Reimplemented from `activemq::wireformat::openwire::marshal::v2::ActiveMQDestinationMarshaller` (p. 302).

6.99.3.4 `virtual void activemq::wireformat::openwire::marshal::v2::ActiveMQTopicMarshaller::looseUnmarshal (OpenWireFormat * wireFormat, commands::DataStructure * dataStructure, decaf::io::DataInputStream * dataIn) throw (decaf::io::IOException)` [virtual]

Un-marshall an object instance from the data input stream.

Parameters:

wireFormat - describes the wire format of the broker

dataStructure - Object to be marshaled

dataIn - BinaryReader that provides that data source

Exceptions:

IOException if an error occurs during the unmarshal.

Reimplemented from `activemq::wireformat::openwire::marshal::v2::ActiveMQDestinationMarshaller` (p. 302).

6.99.3.5 `virtual int activemq::wireformat::openwire::marshal::v2::ActiveMQTopicMarshaller::tightMarshal1 (OpenWireFormat * wireFormat, commands::DataStructure * dataStructure, utils::BooleanStream * bs) throw (decaf::io::IOException)` [virtual]

Write the booleans that this object uses to a BooleanStream.

Parameters:

wireFormat - describes the wire format of the broker

dataStructure - Object to be marshaled

bs - BooleanStream stream used to pack bits from the wire.

Returns:

int value indicating the size of the marshaled object.

Exceptions:

IOException if an error occurs during the marshal.

Reimplemented from `activemq::wireformat::openwire::marshal::v2::ActiveMQDestinationMarshaller` (p. 303).

6.99.3.6 `virtual void activemq::wireformat::openwire::marshal::v2::ActiveMQTopicMarshaller::tightMarshal2 (OpenWireFormat * wireFormat, commands::DataStructure * dataStructure, decaf::io::DataOutputStream * dataOut, utils::BooleanStream * bs) throw (decaf::io::IOException) [virtual]`

Write a object instance to data output stream.

Parameters:

wireFormat - describes the wire format of the broker
dataStructure - Object to be marshaled
dataOut - BinaryReader that provides that data sink
bs - BooleanStream stream used to pack bits from the wire.

Exceptions:

IOException if an error occurs during the marshal.

Reimplemented from `activemq::wireformat::openwire::marshal::v2::ActiveMQDestinationMarshaller` (p. 303).

6.99.3.7 `virtual void activemq::wireformat::openwire::marshal::v2::ActiveMQTopicMarshaller::tightUnmarshal (OpenWireFormat * wireFormat, commands::DataStructure * dataStructure, decaf::io::DataInputStream * dataIn, utils::BooleanStream * bs) throw (decaf::io::IOException) [virtual]`

Un-marshall an object instance from the data input stream.

Parameters:

wireFormat - describes the wire format of the broker.
dataStructure - Object to be un-marshaled.
dataIn - BinaryReader that provides that data.
bs - BooleanStream stream used to unpack bits from the wire.

Exceptions:

IOException if an error occurs during the unmarshal.

Reimplemented from `activemq::wireformat::openwire::marshal::v2::ActiveMQDestinationMarshaller` (p. 304).

Commit the current Transaction.
- virtual void **rollback** () throw (exceptions::ActiveMQException)
Rollback the current Transaction.
- virtual const **decaf::lang::Pointer**< **commands::TransactionId** > & **getTransactionId** () const
Get the Transaction Id object for the current Transaction, returns NULL if no transaction is running.
- virtual bool **isInTransaction** () const
Checks to see if there is currently a Transaction in progress returns false if not, true otherwise.
- virtual int **getMaximumRedeliveries** () const
- virtual long long **getRedeliveryDelay** () const

6.100.1 Detailed Description

Transaction Management class, hold messages that are to be redelivered upon a request to roll-back. The Transaction represents an always running transaction, when it is committed or rolled back it silently creates a new transaction for the next set of messages. The only way to permanently end this transaction is to delete it.

Configuration options

transaction.maxRedeliveryCount Max number of times a message can be re-delivered, if the session is rolled back more than this many time, the message is dropped.

transaction.redeliveryDelay Time in Milliseconds between message redelivery for rolled back transactions.

Since:

2.0

6.100.2 Constructor & Destructor Documentation

6.100.2.1 activemq::core::ActiveMQTransactionContext::ActiveMQTransactionContext (ActiveMQSession * *session*, const decaf::util::Properties & *properties*)

Constructor.

Parameters:

session The session that contains this transaction
properties Configuration parameters for this object

6.100.2.2 virtual activemq::core::ActiveMQTransactionContext::~~ActiveMQTransactionContext () [virtual]

6.100.3 Member Function Documentation

6.100.3.1 virtual void activemq::core::ActiveMQTransactionContext::addSynchronization (const Pointer< Synchronization > & *sync*) [virtual]

Adds a **Synchronization** (p. 3137) to this Transaction.

Parameters:

sync - The **Synchronization** (p. 3137) instance to add.

6.100.3.2 virtual void activemq::core::ActiveMQTransactionContext::begin () throw (exceptions::ActiveMQException) [virtual]

Begins a new transaction if one is not currently in progress.

Exceptions:

ActiveMQException

6.100.3.3 virtual void activemq::core::ActiveMQTransactionContext::commit () throw (exceptions::ActiveMQException) [virtual]

Commit the current Transaction.

Exceptions:*ActiveMQException*

6.100.3.4 `virtual int activemq::core::ActiveMQTransactionContext::getMaximumRedeliveries () const [virtual]`

Returns:

The Maximum number of time the client will attempt to redeliver a message from a rolled back transaction before marking the message as not consumed by this client.

6.100.3.5 `virtual long long activemq::core::ActiveMQTransactionContext::getRedeliveryDelay () const [virtual]`

Returns:

The time in Milliseconds that this client is configured to wait in between redelivery attempts for a Message in a rolled back transaction.

6.100.3.6 `virtual const decaf::lang::Pointer<commands::TransactionId>& activemq::core::ActiveMQTransactionContext::getTransactionId () const [virtual]`

Get the Transaction Id object for the current Transaction, returns NULL if no transaction is running.

Returns:

TransactionInfo

Exceptions:

InvalidStateException if a Transaction is not in progress.

6.100.3.7 `virtual bool activemq::core::ActiveMQTransactionContext::isInTransaction () const [virtual]`

Checks to see if there is currently a Transaction in progress returns false if not, true otherwise.

Returns:

true if a transaction is in progress.

6.100.3.8 `virtual void activemq::core::ActiveMQTransactionContext::removeSynchronization (const Pointer< Synchronization > & sync) [virtual]`

Removes a **Synchronization** (p. 3137) to this Transaction.

Parameters:

sync - The **Synchronization** (p. 3137) instance to add.

6.100.3.9 `virtual void activemq::core::ActiveMQTransactionContext::rollback ()
throw (exceptions::ActiveMQException) [virtual]`

Rollback the current Transaction.

Exceptions:

ActiveMQException

The documentation for this class was generated from the following file:

- `src/main/activemq/core/ActiveMQTransactionContext.h`

6.101 decaf::lang::Appendable Class Reference

#include <src/main/decaf/lang/Appendable.h> Inheritance diagram for decaf::lang::Appendable:

Public Member Functions

- virtual **~Appendable** ()
- virtual **Appendable & append** (char value)=0 throw (decaf::lang::Exception)
*Appends the specified character to this **Appendable** (p. 626).*
- virtual **Appendable & append** (const **CharSequence** *csq)=0 throw (decaf::lang::Exception)
*Appends the specified character sequence to this **Appendable** (p. 626).*
- virtual **Appendable & append** (const **CharSequence** *csq, std::size_t start, std::size_t end)=0 throw (decaf::lang::Exception)
*Appends a subsequence of the specified character sequence to this **Appendable** (p. 626).*

6.101.1 Constructor & Destructor Documentation

6.101.1.1 virtual decaf::lang::Appendable::~~Appendable () [inline, virtual]

6.101.2 Member Function Documentation

6.101.2.1 virtual Appendable& decaf::lang::Appendable::append (const **CharSequence** * *csq*, std::size_t *start*, std::size_t *end*) throw (decaf::lang::Exception) [pure virtual]

Appends a subsequence of the specified character sequence to this **Appendable** (p. 626).

Parameters:

- csq* - The character sequence from which a subsequence will be appended. If csq is NULL, then characters will be appended as if csq contained the string "null".
- start* - The index of the first character in the subsequence
- end* - The index of the character following the last character in the subsequence

Returns:

a Reference to this **Appendable** (p. 626)

Exceptions:

- Exception* (p. 1574) if an error occurs.
- IndexOutOfBoundsException* start is greater than end, or end is greater than csq.length()

Implemented in **decaf::nio::CharBuffer** (p. 1001).

6.101.2.2 `virtual Appendable& decaf::lang::Appendable::append (const CharSequence * csq) throw (decaf::lang::Exception)` [pure virtual]

Appends the specified character sequence to this **Appendable** (p. 626).

Parameters:

csq - The character sequence from which a subsequence will be appended. If *csq* is NULL, then characters will be appended as if *csq* contained the string "null".

Returns:

a Reference to this **Appendable** (p. 626)

Exceptions:

Exception (p. 1574) if an error occurs.

Implemented in **decaf::nio::CharBuffer** (p. 1002).

6.101.2.3 `virtual Appendable& decaf::lang::Appendable::append (char value) throw (decaf::lang::Exception)` [pure virtual]

Appends the specified character to this **Appendable** (p. 626).

Parameters:

value - The character to append

Returns:

a Reference to this **Appendable** (p. 626)

Exceptions:

Exception (p. 1574) if an error occurs.

Implemented in **decaf::nio::CharBuffer** (p. 1002).

Public Member Functions

- **AprPool ()**
- **virtual ~AprPool ()**
- **apr_pool_t * getAprPool () const**
Gets the internal APR Pool.
- **void cleanup ()**
Clears data that was allocated by this pool.

Static Public Member Functions

- **static apr_pool_t * getGlobalPool ()**
Gets a pointer to the Global APR Pool used for the Application.

6.102.1 Detailed Description

Wraps an APR pool object so that classes in decaf can create a static member for use in static methods where apr function calls that need a pool are made.

6.102.2 Constructor & Destructor Documentation

6.102.2.1 decaf::internal::AprPool::AprPool ()

6.102.2.2 virtual decaf::internal::AprPool::~~AprPool () [virtual]

6.102.3 Member Function Documentation

6.102.3.1 void decaf::internal::AprPool::cleanup ()

Clears data that was allocated by this pool. Users should call this after getting the data from the APR functions and copying it to someplace safe.

6.102.3.2 apr_pool_t* decaf::internal::AprPool::getAprPool () const

Gets the internal APR Pool.

Returns:

the internal APR pool

6.102.3.3 static apr_pool_t* decaf::internal::AprPool::getGlobalPool () [static]

Gets a pointer to the Global APR Pool used for the Application.

Returns:

pointer to the global APR Pool

The documentation for this class was generated from the following file:

- src/main/decaf/internal/**AprPool.h**

6.103 decaf::util::concurrent::atomic::AtomicBoolean Class Reference

A boolean value that may be updated atomically.

```
#include <src/main/decaf/util/concurrent/atomic/AtomicBoolean.h>
```

Public Member Functions

- **AtomicBoolean** ()
*Creates a new **AtomicBoolean** (p. 630) whose initial value is false.*
- **AtomicBoolean** (bool initialValue)
*Creates a new **AtomicBoolean** (p. 630) with the initial value.*
- virtual ~**AtomicBoolean** ()
- bool **get** () const
*Gets the current value of this **AtomicBoolean** (p. 630).*
- void **set** (bool newValue)
Unconditionally sets to the given value.
- bool **compareAndSet** (bool expect, bool update)
Atomically sets the value to the given updated value if the current value == the expected value.
- bool **getAndSet** (bool newValue)
Atomically sets to the given value and returns the previous value.
- std::string **toString** () const
Returns the String representation of the current value.

6.103.1 Detailed Description

A boolean value that may be updated atomically. An **AtomicBoolean** (p. 630) is used in applications such as atomically updated flags, and cannot be used as a replacement for a Boolean.

6.103.2 Constructor & Destructor Documentation

6.103.2.1 decaf::util::concurrent::atomic::AtomicBoolean::AtomicBoolean ()

Creates a new **AtomicBoolean** (p. 630) whose initial value is false.

6.103.2.2 decaf::util::concurrent::atomic::AtomicBoolean::AtomicBoolean (bool initialValue)

Creates a new **AtomicBoolean** (p. 630) with the initial value.

Parameters:

initialValue - The initial value of this boolean.

6.103.2.3 virtual decaf::util::concurrent::atomic::AtomicBoolean::~~AtomicBoolean()
[inline, virtual]

6.103.3 Member Function Documentation

6.103.3.1 bool decaf::util::concurrent::atomic::AtomicBoolean::compareAndSet
(bool *expect*, bool *update*)

Atomically sets the value to the given updated value if the current value == the expected value.

Parameters:

expect - the expected value

update - the new value

Returns:

true if successful. False return indicates that the actual value was not equal to the expected value.

6.103.3.2 bool decaf::util::concurrent::atomic::AtomicBoolean::get () const
[inline]

Gets the current value of this **AtomicBoolean** (p. 630).

Returns:

the currently set value.

6.103.3.3 bool decaf::util::concurrent::atomic::AtomicBoolean::getAndSet (bool
new Value)

Atomically sets to the given value and returns the previous value.

Parameters:

new Value - the new value

Returns:

the previous value

6.103.3.4 void decaf::util::concurrent::atomic::AtomicBoolean::set (bool *new Value*)
[inline]

Unconditionally sets to the given value.

Parameters:

new Value - the new value

6.103.3.5 `std::string decaf::util::concurrent::atomic::AtomicBoolean::toString ()`
`const`

Returns the String representation of the current value.

Returns:

the String representation of the current value.

The documentation for this class was generated from the following file:

- `src/main/decaf/util/concurrent/atomic/AtomicBoolean.h`

6.104 decaf::util::concurrent::atomic::AtomicInteger Class Reference

An int value that may be updated atomically.

#include <src/main/decaf/util/concurrent/atomic/AtomicInteger.h> Inheritance diagram for decaf::util::concurrent::atomic::AtomicInteger:

Public Member Functions

- **AtomicInteger** ()
*Create a new **AtomicInteger** (p. 633) with an initial value of 0.*
- **AtomicInteger** (int initialValue)
*Create a new **AtomicInteger** (p. 633) with the given initial value.*
- virtual **~AtomicInteger** ()
- int **get** () const
Gets the current value.
- void **set** (int newValue)
Sets to the given value.
- int **getAndSet** (int newValue)
Atomically sets to the given value and returns the old value.
- bool **compareAndSet** (int expect, int update)
Atomically sets the value to the given updated value if the current value == the expected value.
- int **getAndIncrement** ()
Atomically increments by one the current value.
- int **getAndDecrement** ()
Atomically decrements by one the current value.
- int **getAndAdd** (int delta)
Atomically adds the given value to the current value.
- int **incrementAndGet** ()
Atomically increments by one the current value.
- int **decrementAndGet** ()
Atomically decrements by one the current value.
- int **addAndGet** (int delta)
Atomically adds the given value to the current value.
- std::string **toString** () const

Returns the String representation of the current value.

- int **intValue** () const

Description copied from class: Number Returns the value of the specified number as an int.

- long long **longValue** () const

Description copied from class: Number Returns the value of the specified number as a long.

- float **floatValue** () const

Description copied from class: Number Returns the value of the specified number as a float.

- double **doubleValue** () const

Description copied from class: Number Returns the value of the specified number as a double.

6.104.1 Detailed Description

An int value that may be updated atomically. An **AtomicInteger** (p. 633) is used in applications such as atomically incremented counters, and cannot be used as a replacement for an Integer. However, this class does extend Number to allow uniform access by tools and utilities that deal with numerically-based classes.

6.104.2 Constructor & Destructor Documentation

6.104.2.1 decaf::util::concurrent::atomic::AtomicInteger::AtomicInteger ()

Create a new **AtomicInteger** (p. 633) with an initial value of 0.

6.104.2.2 decaf::util::concurrent::atomic::AtomicInteger::AtomicInteger (int *initialValue*)

Create a new **AtomicInteger** (p. 633) with the given initial value.

Parameters:

initialValue - The initial value of this object.

6.104.2.3 virtual decaf::util::concurrent::atomic::AtomicInteger::~~AtomicInteger () [inline, virtual]

6.104.3 Member Function Documentation

6.104.3.1 int decaf::util::concurrent::atomic::AtomicInteger::addAndGet (int *delta*)

Atomically adds the given value to the current value.

Parameters:

delta - the value to add.

Returns:

the updated value.

6.104.3.2 bool decaf::util::concurrent::atomic::AtomicInteger::compareAndSet (int *expect*, int *update*)

Atomically sets the value to the given updated value if the current value == the expected value.

Parameters:

expect - the expected value

update - the new value

Returns:

true if successful. False return indicates that the actual value was not equal to the expected value.

6.104.3.3 int decaf::util::concurrent::atomic::AtomicInteger::decrementAndGet ()

Atomically decrements by one the current value.

Returns:

the updated value.

Referenced by decaf::lang::AtomicRefCounter::release().

6.104.3.4 double decaf::util::concurrent::atomic::AtomicInteger::doubleValue () const [virtual]

Description copied from class: Number Returns the value of the specified number as a double. This may involve rounding.

Returns:

the numeric value represented by this object after conversion to type double.

Implements **decaf::lang::Number** (p. 2433).

6.104.3.5 float decaf::util::concurrent::atomic::AtomicInteger::floatValue () const [virtual]

Description copied from class: Number Returns the value of the specified number as a float. This may involve rounding.

Returns:

the numeric value represented by this object after conversion to type float.

Implements **decaf::lang::Number** (p. 2433).

6.104.3.6 `int decaf::util::concurrent::atomic::AtomicInteger::get () const [inline]`

Gets the current value.

Returns:

the current value.

6.104.3.7 `int decaf::util::concurrent::atomic::AtomicInteger::getAndAdd (int delta)`

Atomically adds the given value to the current value.

Parameters:

delta - The value to add.

Returns:

the previous value.

6.104.3.8 `int decaf::util::concurrent::atomic::AtomicInteger::getAndDecrement ()`

Atomically decrements by one the current value.

Returns:

the previous value.

6.104.3.9 `int decaf::util::concurrent::atomic::AtomicInteger::getAndIncrement ()`

Atomically increments by one the current value.

Returns:

the previous value.

6.104.3.10 `int decaf::util::concurrent::atomic::AtomicInteger::getAndSet (int new Value)`

Atomically sets to the given value and returns the old value.

Parameters:

new Value - the new value.

Returns:

the previous value.

6.104.3.11 int decaf::util::concurrent::atomic::AtomicInteger::incrementAndGet ()

Atomically increments by one the current value.

Returns:

the updated value.

Referenced by `decaf::lang::AtomicRefCounter::AtomicRefCounter()`.

6.104.3.12 int decaf::util::concurrent::atomic::AtomicInteger::intValue () const [virtual]

Description copied from class: Number Returns the value of the specified number as an int. This may involve rounding or truncation.

Returns:

the numeric value represented by this object after conversion to type int.

Implements **decaf::lang::Number** (p. 2433).

6.104.3.13 long long decaf::util::concurrent::atomic::AtomicInteger::longValue () const [virtual]

Description copied from class: Number Returns the value of the specified number as a long. This may involve rounding or truncation.

Returns:

the numeric value represented by this object after conversion to type long long.

Implements **decaf::lang::Number** (p. 2433).

6.104.3.14 void decaf::util::concurrent::atomic::AtomicInteger::set (int *new Value*) [inline]

Sets to the given value.

Parameters:

new Value - the new value

6.104.3.15 std::string decaf::util::concurrent::atomic::AtomicInteger::toString () const

Returns the String representation of the current value.

Returns:

the String representation of the current value.

The documentation for this class was generated from the following file:

- `src/main/decaf/util/concurrent/atomic/AtomicInteger.h`

6.105 decaf::lang::AtomicRefCounter Class Reference

```
#include <src/main/decaf/lang/Pointer.h>
```

Inherited by `decaf::lang::Pointer< activemq::threads::TaskRunner >`, `decaf::lang::Pointer< ActiveMQDestination >`, `decaf::lang::Pointer< ActiveMQTransactionContext >`, `decaf::lang::Pointer< BackupTransportPool >`, `decaf::lang::Pointer< BooleanExpression >`, `decaf::lang::Pointer< BrokerError >`, `decaf::lang::Pointer< BrokerId >`, `decaf::lang::Pointer< CloseTransportsTask >`, `decaf::lang::Pointer< cms::Destination >`, `decaf::lang::Pointer< commands::BrokerInfo >`, `decaf::lang::Pointer< commands::ConnectionInfo >`, `decaf::lang::Pointer< commands::ConsumerInfo >`, `decaf::lang::Pointer< commands::Message >`, `decaf::lang::Pointer< commands::MessageAck >`, `decaf::lang::Pointer< commands::ProducerInfo >`, `decaf::lang::Pointer< commands::SessionInfo >`, `decaf::lang::Pointer< commands::TransactionId >`, `decaf::lang::Pointer< commands::WireFormatInfo >`, `decaf::lang::Pointer< Comparator< E > >`, `decaf::lang::Pointer< CompositeTaskRunner >`, `decaf::lang::Pointer< ConnectionId >`, `decaf::lang::Pointer< ConnectionInfo >`, `decaf::lang::Pointer< ConsumerId >`, `decaf::lang::Pointer< ConsumerInfo >`, `decaf::lang::Pointer< core::ActiveMQAckHandler >`, `decaf::lang::Pointer< DataStructure >`, `decaf::lang::Pointer< decaf::lang::Runnable >`, `decaf::lang::Pointer< decaf::lang::Thread >`, `decaf::lang::Pointer< decaf::util::Properties >`, `decaf::lang::Pointer< Exception >`, `decaf::lang::Pointer< InactivityMonitorData >`, `decaf::lang::Pointer< LockHandle >`, `decaf::lang::Pointer< Message >`, `decaf::lang::Pointer< MessageAck >`, `decaf::lang::Pointer< MessageId >`, `decaf::lang::Pointer< ProducerId >`, `decaf::lang::Pointer< ProducerInfo >`, `decaf::lang::Pointer< Response >`, `decaf::lang::Pointer< ResponseBuilder >`, `decaf::lang::Pointer< SessionId >`, `decaf::lang::Pointer< SessionInfo >`, `decaf::lang::Pointer< Tracked >`, `decaf::lang::Pointer< TransactionId >`, `decaf::lang::Pointer< Transport >`, `decaf::lang::Pointer< transport::Transport >`, `decaf::lang::Pointer< TransportListener >`, `decaf::lang::Pointer< URI >`, `decaf::lang::Pointer< URIPool >`, and `decaf::lang::Pointer< wireformat::WireFormat >`.

Public Member Functions

- `AtomicRefCounter ()`
- `AtomicRefCounter (const AtomicRefCounter &other)`

Protected Member Functions

- `void swap (AtomicRefCounter &other)`

Swaps this instance's reference counter with the one given, this allows for copy-and-swap semantics of this object.

- `bool release ()`

Removes a reference to the counter Atomically and returns if the counter has reached zero, once the counter hits zero, the internal counter is destroyed and this instance is now considered to be unreferenced.

6.105.1 Constructor & Destructor Documentation

6.105.1.1 decaf::lang::AtomicRefCounter::AtomicRefCounter () [inline]

6.105.1.2 decaf::lang::AtomicRefCounter::AtomicRefCounter (const AtomicRefCounter & *other*) [inline]

References decaf::util::concurrent::atomic::AtomicInteger::incrementAndGet().

6.105.2 Member Function Documentation

6.105.2.1 bool decaf::lang::AtomicRefCounter::release () [inline, protected]

Removes a reference to the counter Atomically and returns if the counter has reached zero, once the counter hits zero, the internal counter is destroyed and this instance is now considered to be unreferenced.

Returns:

true if the count is now zero.

Reimplemented in decaf::lang::Pointer< commands::ConsumerId > (p. 2502), decaf::lang::Pointer< MessageAck > (p. 2502), decaf::lang::Pointer< BooleanExpression > (p. 2502), decaf::lang::Pointer< BrokerError > (p. 2502), decaf::lang::Pointer< Transport > (p. 2502), decaf::lang::Pointer< wireformat::WireFormat > (p. 2502), decaf::lang::Pointer< CloseTransportsTask > (p. 2502), decaf::lang::Pointer< CompositeTaskRunner > (p. 2502), decaf::lang::Pointer< commands::WireFormatInfo > (p. 2502), decaf::lang::Pointer< ActiveMQTransactionContext > (p. 2502), decaf::lang::Pointer< commands::ProducerInfo > (p. 2502), decaf::lang::Pointer< Comparator< E > > (p. 2502), decaf::lang::Pointer< BrokerId > (p. 2502), decaf::lang::Pointer< commands::SessionInfo > (p. 2502), decaf::lang::Pointer< Message > (p. 2502), decaf::lang::Pointer< URI > (p. 2502), decaf::lang::Pointer< DataStructure > (p. 2502), decaf::lang::Pointer< commands::ConnectionInfo > (p. 2502), decaf::lang::Pointer< activemq::threads::TaskRunner > (p. 2502), decaf::lang::Pointer< LockHandle > (p. 2502), decaf::lang::Pointer< ConsumerInfo > (p. 2502), decaf::lang::Pointer< ConnectionId > (p. 2502), decaf::lang::Pointer< decaf::lang::Runnable > (p. 2502), decaf::lang::Pointer< BackupTransportPool > (p. 2502), decaf::lang::Pointer< commands::BrokerInfo > (p. 2502), decaf::lang::Pointer< ProducerInfo > (p. 2502), decaf::lang::Pointer< decaf::lang::Thread > (p. 2502), decaf::lang::Pointer< MessageId > (p. 2502), decaf::lang::Pointer< Response > (p. 2502), decaf::lang::Pointer< SessionId > (p. 2502), decaf::lang::Pointer< cms::Destination > (p. 2502), decaf::lang::Pointer< TransportListener > (p. 2502), decaf::lang::Pointer< commands::TransactionId > (p. 2502), decaf::lang::Pointer< ActiveMQDestination > (p. 2502), decaf::lang::Pointer< ProducerId > (p. 2502), decaf::lang::Pointer< ResponseBuilder > (p. 2502), decaf::lang::Pointer< SessionInfo > (p. 2502), decaf::lang::Pointer< commands::Message > (p. 2502), decaf::lang::Pointer< transport::Transport > (p. 2502), decaf::lang::Pointer< InactivityMonitorData > (p. 2502), decaf::lang::Pointer< Tracked > (p. 2502), decaf::lang::Pointer< ConnectionInfo > (p. 2502), decaf::lang::Pointer< commands::MessageAck > (p. 2502), decaf::lang::Pointer< core::ActiveMQAckHandler > (p. 2502), decaf::lang::Pointer< Exception > (p. 2502), decaf::lang::Pointer< commands::ConsumerInfo > (p. 2502), decaf::lang::Pointer< ConsumerId > (p. 2502), decaf::lang::Pointer<

URIPool > (p. 2502), **decaf::lang::Pointer< decaf::util::Properties >** (p. 2502), and **decaf::lang::Pointer< TransactionId >** (p. 2502).

References `decaf::util::concurrent::atomic::AtomicInteger::decrementAndGet()`.

6.105.2.2 `void decaf::lang::AtomicRefCounter::swap (AtomicRefCounter & other)`
[inline, protected]

Swaps this instance's reference counter with the one given, this allows for copy-and-swap semantics of this object.

Parameters:

other The value to swap with this one's.

The documentation for this class was generated from the following file:

- `src/main/decaf/lang/Pointer.h`

6.106 decaf::util::concurrent::atomic::AtomicReference< T > Class Template Reference

An Pointer reference that may be updated atomically.

```
#include <src/main/decaf/util/concurrent/atomic/AtomicReference.h>
```

Public Member Functions

- **AtomicReference** ()
- **AtomicReference** (T *value)
- virtual ~**AtomicReference** ()
- T * **get** () const

Gets the Current Value.

- void **set** (T *newValue)

Sets the Current value of this Reference.

- bool **compareAndSet** (T *expect, T *update)

Atomically sets the value to the given updated value if the current value == the expected value.

- T * **getAndSet** (T *newValue)

Atomically sets to the given value and returns the old value.

- std::string **toString** () const

Returns the String representation of the current value.

6.106.1 Detailed Description

```
template<typename T> class decaf::util::concurrent::atomic::AtomicReference< T >
```

An Pointer reference that may be updated atomically.

6.106.2 Constructor & Destructor Documentation

6.106.2.1 `template<typename T >
decaf::util::concurrent::atomic::AtomicReference< T
>::AtomicReference () [inline]`

6.106.2.2 `template<typename T >
decaf::util::concurrent::atomic::AtomicReference< T
>::AtomicReference (T * value) [inline]`

6.106.2.3 `template<typename T > virtual
decaf::util::concurrent::atomic::AtomicReference< T
>::~~AtomicReference () [inline, virtual]`

6.106.3 Member Function Documentation

6.106.3.1 `template<typename T > bool
decaf::util::concurrent::atomic::AtomicReference< T
>::compareAndSet (T * expect, T * update) [inline]`

Atomically sets the value to the given updated value if the current value == the expected value.

Parameters:

expect - the expected value

update - the new value

Returns:

true if successful. False return indicates that the actual value was not equal to the expected value.

6.106.3.2 `template<typename T > T*
decaf::util::concurrent::atomic::AtomicReference< T >::get
() const [inline]`

Gets the Current Value.

Returns:

the current value of this Reference.

6.106.3.3 `template<typename T > T*
decaf::util::concurrent::atomic::AtomicReference< T
>::getAndSet (T * new Value) [inline]`

Atomically sets to the given value and returns the old value.

Parameters:

new Value- the new value

Returns:

the previous value.

6.106.3.4 `template<typename T > void
decaf::util::concurrent::atomic::AtomicReference< T >::set
(T * new Value) [inline]`

Sets the Current value of this Reference.

Parameters:

new Value The new Value of this Reference.

6.106.3.5 `template<typename T > std::string
decaf::util::concurrent::atomic::AtomicReference< T
>::toString () const [inline]`

Returns the String representation of the current value.

Returns:

string representation of the current value.

The documentation for this class was generated from the following file:

- `src/main/decaf/util/concurrent/atomic/AtomicReference.h`

6.107 activemq::transport::failover::BackupTransport Class Reference

#include <src/main/activemq/transport/failover/BackupTransport.h> Inheritance diagram for activemq::transport::failover::BackupTransport:

Public Member Functions

- **BackupTransport** (**BackupTransportPool** *failover)
- virtual **~BackupTransport** ()
- **decaf::net::URI** **getUri** () const
Gets the URI assigned to this Backup.
- void **setUri** (const **decaf::net::URI** &uri)
*Sets the URI assigned to this **Transport** (p. 3273).*
- const **Pointer**< **Transport** > & **getTransport** ()
Gets the currently held transport.
- void **setTransport** (const **Pointer**< **Transport** > &transport)
Sets the held transport, if not NULL then start to listen for exceptions from the held transport.
- virtual void **onException** (const **decaf::lang::Exception** &ex)
Event handler for an exception from a command transport.
- bool **isClosed** () const
*Has the **Transport** (p. 3273) been shutdown and no longer usable.*
- void **setClosed** (bool value)
*Sets the closed flag on this **Transport** (p. 3273).*

6.107.1 Constructor & Destructor Documentation

- 6.107.1.1 **activemq::transport::failover::BackupTransport::BackupTransport** (**BackupTransportPool** * failover)
- 6.107.1.2 virtual **activemq::transport::failover::BackupTransport::~~BackupTransport** ()
[virtual]

6.107.2 Member Function Documentation

- 6.107.2.1 const **Pointer**<**Transport**>& **activemq::transport::failover::BackupTransport::getTransport** () [inline]

Gets the currently held transport.

Returns:

pointer to the held transport or NULL if not set.

6.107.2.2 decaf::net::URI activemq::transport::failover::BackupTransport::getUri () const [inline]

Gets the URI assigned to this Backup.

Returns:

the assigned URI

6.107.2.3 bool activemq::transport::failover::BackupTransport::isClosed () const [inline]

Has the **Transport** (p. 3273) been shutdown and no longer usable.

Returns:

true if the **Transport** (p. 3273)

6.107.2.4 virtual void activemq::transport::failover::BackupTransport::onException (const decaf::lang::Exception & *ex*) [virtual]

Event handler for an exception from a command transport. The **BackupTransport** (p. 644) closes its internal **Transport** (p. 3273) when an exception is received and returns the URI to the pool of URIs to attempt connections to.

Parameters:

ex The exception that was passed to this listener to handle.

Implements **activemq::transport::TransportListener** (p. 3290).

6.107.2.5 void activemq::transport::failover::BackupTransport::setClosed (bool *value*) [inline]

Sets the closed flag on this **Transport** (p. 3273).

Parameters:

value - true for closed.

6.107.2.6 void activemq::transport::failover::BackupTransport::setTransport (const Pointer< Transport > & *transport*) [inline]

Sets the held transport, if not NULL then start to listen for exceptions from the held transport.

Parameters:

transport The transport to hold.

6.107.2.7 `void activemq::transport::failover::BackupTransport::setUri (const decaf::net::URI & uri) [inline]`

Sets the URI assigned to this **Transport** (p. 3273).

The documentation for this class was generated from the following file:

- `src/main/activemq/transport/failover/BackupTransport.h`

6.108 activemq::transport::failover::BackupTransportPool Class Reference

6.108.1.2 `activemq::transport::failover::BackupTransportPool::BackupTransportPool (int backupPoolSize, const Pointer< CompositeTaskRunner > & taskRunner, const Pointer< CloseTransportsTask > & closeTask, const Pointer< URIPool > & uriPool)`

6.108.1.3 `virtual
activemq::transport::failover::BackupTransportPool::~~BackupTransportPool
() [virtual]`

6.108.2 Member Function Documentation

6.108.2.1 `Pointer<BackupTransport> activemq::transport::failover::BackupTransportPool::getBackup
()`

Get a Connected **Transport** (p. 3273) from the pool of Backups if any are present, otherwise it return a NULL Pointer.

Returns:

Pointer to a Connected **Transport** (p. 3273) or NULL

6.108.2.2 `int activemq::transport::failover::BackupTransportPool::getBackupPoolSize ()
const [inline]`

Gets the Max number of Backups this Task will create.

Returns:

the max number of active BackupTransports that will be created.

6.108.2.3 `bool activemq::transport::failover::BackupTransportPool::isEnabled ()
const [inline]`

Gets if the backup **Transport** (p. 3273) Pool has been enabled or not, when not enabled no backups are created and any that were are destroyed.

Returns:

true if enable.

6.108.2.4 `virtual bool activemq::transport::failover::BackupTransportPool::isPending () const` [virtual]

Return true if we don't currently have enough Connected Transports.

Implements **activemq::threads::CompositeTask** (p. 1090).

6.108.2.5 `virtual bool activemq::transport::failover::BackupTransportPool::iterate ()` [virtual]

Connect to a Backup Broker if we haven't already connected to the max number of Backups.

Implements **activemq::threads::Task** (p. 3148).

6.108.2.6 `void activemq::transport::failover::BackupTransportPool::setBackupPoolSize (int size)` [inline]

Sets the Max number of Backups this Task will create.

Parameters:

size - the max number of active BackupTransports that will be created.

6.108.2.7 `void activemq::transport::failover::BackupTransportPool::setEnabled (bool value)`

Sets if this Backup **Transport** (p. 3273) Pool is enabled. When not enabled no Backups are created and any that were are destroyed.

Parameters:

value - true to enable backup creation, false to disable.

6.108.3 Friends And Related Function Documentation

6.108.3.1 `friend class BackupTransport` [friend]

The documentation for this class was generated from the following file:

- `src/main/activemq/transport/failover/BackupTransportPool.h`

6.109 activemq::commands::BaseCommand Class Reference

6.109.1 Constructor & Destructor Documentation

6.109.1.1 `activemq::commands::BaseCommand::BaseCommand ()` [inline]

6.109.1.2 `virtual activemq::commands::BaseCommand::~~BaseCommand ()`
[inline, virtual]

6.109.2 Member Function Documentation

6.109.2.1 `virtual void activemq::commands::BaseCommand::copyDataStructure (const DataStructure * src)` [inline, virtual]

Copy the contents of the passed object into this objects members, overwriting any existing data.

Returns:

src - Source Object

Implements `activemq::commands::DataStructure` (p. 1462).

Reimplemented in `activemq::commands::ActiveMQBlobMessage` (p. 173), `activemq::commands::ActiveMQBytesMessage` (p. 201), `activemq::commands::ActiveMQMapMessage` (p. 312), `activemq::commands::ActiveMQMessage` (p. 343), `activemq::commands::ActiveMQObjectMessage` (p. 384), `activemq::commands::ActiveMQStreamMessage` (p. 467), `activemq::commands::ActiveMQTextMessage` (p. 575), `activemq::commands::BrokerError` (p. 746), `activemq::commands::BrokerInfo` (p. 777), `activemq::commands::ConnectionControl` (p. 1136), `activemq::commands::ConnectionError` (p. 1161), `activemq::commands::ConnectionInfo` (p. 1213), `activemq::commands::ConsumerControl` (p. 1251), `activemq::commands::ConsumerInfo` (p. 1302), `activemq::commands::ControlCommand` (p. 1331), `activemq::commands::DataArrayResponse` (p. 1357), `activemq::commands::DataResponse` (p. 1396), `activemq::commands::DestinationInfo` (p. 1485), `activemq::commands::ExceptionResponse` (p. 1583), `activemq::commands::FlushCommand` (p. 1677), `activemq::commands::IntegerResponse` (p. 1778), `activemq::commands::KeepAliveInfo` (p. 1931), `activemq::commands::Message` (p. 2150), `activemq::commands::MessageAck` (p. 2189), `activemq::commands::MessageDispatch` (p. 2220), `activemq::commands::MessageDispatchNotification` (p. 2252), `activemq::commands::MessagePull` (p. 2347), `activemq::commands::ProducerAck` (p. 2580), `activemq::commands::ProducerInfo` (p. 2632), `activemq::commands::RemoveInfo` (p. 2704), `activemq::commands::RemoveSubscriptionInfo` (p. 2728), `activemq::commands::ReplayCommand` (p. 2753), `activemq::commands::Response` (p. 2782), `activemq::commands::SessionInfo` (p. 2878), `activemq::commands::ShutdownInfo` (p. 2935), `activemq::commands::TransactionInfo` (p. 3241), and `activemq::commands::WireFormatInfo` (p. 3372).

References `getCommandId()`, and `isResponseRequired()`.

6.109.2.2 `virtual bool activemq::commands::BaseCommand::equals (const DataStructure * value) const` [inline, virtual]

Compares the `DataStructure` (p. 1461) passed in to this one, and returns if they are equivalent. Equivalent here means that they are of the same type, and that each element of the objects are the same.

Returns:

true if DataStructure's are Equal.

Implements `activemq::commands::DataStructure` (p. 1463).

Reimplemented in `activemq::commands::ActiveMQBlobMessage` (p. 174), `activemq::commands::ActiveMQBytesMessage` (p. 201), `activemq::commands::ActiveMQMapMessage` (p. 312), `activemq::commands::ActiveMQMessage` (p. 343), `activemq::commands::ActiveMQMessageTemplate< T >` (p. 369), `activemq::commands::ActiveMQObjectMessage` (p. 384), `activemq::commands::ActiveMQStreamMessage` (p. 468), `activemq::commands::ActiveMQTextMessage` (p. 575), `activemq::commands::BrokerInfo` (p. 777), `activemq::commands::ConnectionControl` (p. 1137), `activemq::commands::ConnectionError` (p. 1161), `activemq::commands::ConnectionInfo` (p. 1213), `activemq::commands::ConsumerControl` (p. 1252), `activemq::commands::ConsumerInfo` (p. 1303), `activemq::commands::ControlCommand` (p. 1331), `activemq::commands::DataArrayResponse` (p. 1357), `activemq::commands::DataResponse` (p. 1396), `activemq::commands::DestinationInfo` (p. 1486), `activemq::commands::ExceptionResponse` (p. 1583), `activemq::commands::FlushCommand` (p. 1677), `activemq::commands::IntegerResponse` (p. 1778), `activemq::commands::KeepAliveInfo` (p. 1931), `activemq::commands::Message` (p. 2150), `activemq::commands::MessageAck` (p. 2190), `activemq::commands::MessageDispatch` (p. 2221), `activemq::commands::MessageDispatchNotification` (p. 2253), `activemq::commands::MessagePull` (p. 2348), `activemq::commands::ProducerAck` (p. 2580), `activemq::commands::ProducerInfo` (p. 2633), `activemq::commands::RemoveInfo` (p. 2704), `activemq::commands::RemoveSubscriptionInfo` (p. 2729), `activemq::commands::ReplayCommand` (p. 2753), `activemq::commands::Response` (p. 2782), `activemq::commands::SessionInfo` (p. 2878), `activemq::commands::ShutdownInfo` (p. 2935), `activemq::commands::TransactionInfo` (p. 3241), `activemq::commands::WireFormatInfo` (p. 3372), `activemq::commands::ActiveMQMessageTemplate< cms::BytesMessage >` (p. 369), `activemq::commands::ActiveMQMessageTemplate< cms::MapMessage >` (p. 369), `activemq::commands::ActiveMQMessageTemplate< cms::Message >` (p. 369), `activemq::commands::ActiveMQMessageTemplate< cms::StreamMessage >` (p. 369), `activemq::commands::ActiveMQMessageTemplate< cms::TextMessage >` (p. 369), and `activemq::commands::ActiveMQMessageTemplate< cms::ObjectMessage >` (p. 369).

References `activemq::commands::BaseDataStructure::equals()`.

6.109.2.3 `virtual int activemq::commands::BaseCommand::getCommandId () const` [inline, virtual]

Gets the **Command** (p. 1063) Id of this **Message** (p. 2145).

Returns:

Command (p. 1063) Id

Implements `activemq::commands::Command` (p. 1064).

Referenced by `copyDataStructure()`.

6.109.2.4 virtual bool activemq::commands::BaseCommand::isBrokerInfo () const
[inline, virtual]

Implements **activemq::commands::Command** (p. 1064).

Reimplemented in **activemq::commands::BrokerInfo** (p. 779).

6.109.2.5 virtual bool activemq::commands::BaseCommand::isConnectionInfo ()
const [inline, virtual]

Implements **activemq::commands::Command** (p. 1064).

Reimplemented in **activemq::commands::ConnectionInfo** (p. 1214).

6.109.2.6 virtual bool activemq::commands::BaseCommand::isConsumerInfo ()
const [inline, virtual]

Implements **activemq::commands::Command** (p. 1064).

Reimplemented in **activemq::commands::ConsumerInfo** (p. 1304).

6.109.2.7 virtual bool activemq::commands::BaseCommand::isKeepAliveInfo ()
const [inline, virtual]

Implements **activemq::commands::Command** (p. 1064).

Reimplemented in **activemq::commands::KeepAliveInfo** (p. 1932).

6.109.2.8 virtual bool activemq::commands::BaseCommand::isMessage () const
[inline, virtual]

Implements **activemq::commands::Command** (p. 1064).

Reimplemented in **activemq::commands::Message** (p. 2156).

6.109.2.9 virtual bool activemq::commands::BaseCommand::isMessageAck () const
[inline, virtual]

Implements **activemq::commands::Command** (p. 1065).

Reimplemented in **activemq::commands::MessageAck** (p. 2191).

6.109.2.10 virtual bool activemq::commands::BaseCommand::isMessageDispatch ()
const [inline, virtual]

Implements **activemq::commands::Command** (p. 1065).

Reimplemented in **activemq::commands::MessageDispatch** (p. 2222).

6.109.2.11 `virtual bool activemq::commands::BaseCommand::isMessageDispatchNotification () const [inline, virtual]`

Implements `activemq::commands::Command` (p. 1065).

Reimplemented in `activemq::commands::MessageDispatchNotification` (p. 2254).

6.109.2.12 `virtual bool activemq::commands::BaseCommand::isProducerAck () const [inline, virtual]`

Implements `activemq::commands::Command` (p. 1065).

Reimplemented in `activemq::commands::ProducerAck` (p. 2581).

6.109.2.13 `virtual bool activemq::commands::BaseCommand::isProducerInfo () const [inline, virtual]`

Implements `activemq::commands::Command` (p. 1065).

Reimplemented in `activemq::commands::ProducerInfo` (p. 2634).

6.109.2.14 `virtual bool activemq::commands::BaseCommand::isRemoveInfo () const [inline, virtual]`

Implements `activemq::commands::Command` (p. 1065).

Reimplemented in `activemq::commands::RemoveInfo` (p. 2705).

6.109.2.15 `virtual bool activemq::commands::BaseCommand::isRemoveSubscriptionInfo () const [inline, virtual]`

Implements `activemq::commands::Command` (p. 1065).

Reimplemented in `activemq::commands::RemoveSubscriptionInfo` (p. 2730).

6.109.2.16 `virtual bool activemq::commands::BaseCommand::isResponse () const [inline, virtual]`

Implements `activemq::commands::Command` (p. 1065).

Reimplemented in `activemq::commands::Response` (p. 2783).

6.109.2.17 `virtual bool activemq::commands::BaseCommand::isResponseRequired () const [inline, virtual]`

Is a **Response** (p. 2781) required for this **Command** (p. 1063).

Returns:

true if a response is required.

Implements **activemq::commands::Command** (p. 1066).

Referenced by `copyDataStructure()`.

6.109.2.18 `virtual bool activemq::commands::BaseCommand::isShutdownInfo ()`
`const [inline, virtual]`

Implements **activemq::commands::Command** (p. 1066).

Reimplemented in **activemq::commands::ShutdownInfo** (p. 2936).

6.109.2.19 `virtual bool activemq::commands::BaseCommand::isTransactionInfo ()`
`const [inline, virtual]`

Implements **activemq::commands::Command** (p. 1066).

Reimplemented in **activemq::commands::TransactionInfo** (p. 3242).

6.109.2.20 `virtual bool activemq::commands::BaseCommand::isWireFormatInfo ()`
`const [inline, virtual]`

Implements **activemq::commands::Command** (p. 1066).

Reimplemented in **activemq::commands::WireFormatInfo** (p. 3376).

6.109.2.21 `virtual void activemq::commands::BaseCommand::setCommandId (int`
`id) [inline, virtual]`

Sets the **Command** (p. 1063) Id of this **Message** (p. 2145).

Parameters:

id **Command** (p. 1063) Id

Implements **activemq::commands::Command** (p. 1066).

6.109.2.22 `virtual void activemq::commands::BaseCommand::setResponseRequired`
`(const bool required) [inline, virtual]`

Set if this **Message** (p. 2145) requires a **Response** (p. 2781).

Parameters:

required true if response is required

Implements **activemq::commands::Command** (p. 1066).

6.109.2.23 `virtual std::string activemq::commands::BaseCommand::toString ()`
`const [inline, virtual]`

Returns a string containing the information for this **DataStructure** (p. 1461) such as its type and value of its elements.

Returns:

formatted string useful for debugging.

Implements **activemq::commands::Command** (p. 1067).

Reimplemented in **activemq::commands::ActiveMQBlobMessage** (p. 176), **activemq::commands::ActiveMQBytesMessage** (p. 208), **activemq::commands::ActiveMQMapMessage** (p. 320), **activemq::commands::ActiveMQMessage** (p. 344), **activemq::commands::ActiveMQObjectMessage** (p. 385), **activemq::commands::ActiveMQStreamMessage** (p. 474), **activemq::commands::ActiveMQTextMessage** (p. 577), **activemq::commands::BrokerInfo** (p. 780), **activemq::commands::ConnectionControl** (p. 1138), **activemq::commands::ConnectionError** (p. 1162), **activemq::commands::ConnectionInfo** (p. 1215), **activemq::commands::ConsumerControl** (p. 1253), **activemq::commands::ConsumerInfo** (p. 1305), **activemq::commands::ControlCommand** (p. 1332), **activemq::commands::DataArrayResponse** (p. 1358), **activemq::commands::DataResponse** (p. 1397), **activemq::commands::DestinationInfo** (p. 1487), **activemq::commands::ExceptionResponse** (p. 1584), **activemq::commands::FlushCommand** (p. 1678), **activemq::commands::IntegerResponse** (p. 1779), **activemq::commands::KeepAliveInfo** (p. 1932), **activemq::commands::Message** (p. 2159), **activemq::commands::MessageAck** (p. 2192), **activemq::commands::MessageDispatch** (p. 2222), **activemq::commands::MessageDispatchNotification** (p. 2255), **activemq::commands::MessagePull** (p. 2349), **activemq::commands::ProducerAck** (p. 2581), **activemq::commands::ProducerInfo** (p. 2634), **activemq::commands::RemoveInfo** (p. 2705), **activemq::commands::RemoveSubscriptionInfo** (p. 2730), **activemq::commands::ReplayCommand** (p. 2754), **activemq::commands::Response** (p. 2783), **activemq::commands::SessionInfo** (p. 2879), **activemq::commands::ShutdownInfo** (p. 2936), **activemq::commands::TransactionInfo** (p. 3243), and **activemq::commands::WireFormatInfo** (p. 3378).

References **activemq::commands::BaseDataStructure::toString()**.

The documentation for this class was generated from the following file:

- `src/main/activemq/commands/BaseCommand.h`

6.110 activemq::wireformat::openwire::marshal::v3::BaseCommandMarshaller Class Reference

Marshaling code for Open Wire Format for **BaseCommandMarshaller** (p. 657).

#include <src/main/activemq/wireformat/openwire/marshal/v3/BaseCommandMarshaller.h>Inheritance diagram for activemq::wireformat::openwire::marshal::v3::BaseCommandMarshaller:

Public Member Functions

- **BaseCommandMarshaller** ()
- virtual **~BaseCommandMarshaller** ()
- virtual void **tightUnmarshal** (**OpenWireFormat** *wireFormat, **commands::DataStructure** *dataStructure, **decaf::io::DataInputStream** *dataIn, **utils::BooleanStream** *bs) throw (**decaf::io::IOException**)

Un-marshal an object instance from the data input stream.

- virtual int **tightMarshal1** (**OpenWireFormat** *wireFormat, **commands::DataStructure** *dataStructure, **utils::BooleanStream** *bs) throw (**decaf::io::IOException**)

Write the booleans that this object uses to a BooleanStream.

- virtual void **tightMarshal2** (**OpenWireFormat** *wireFormat, **commands::DataStructure** *dataStructure, **decaf::io::DataOutputStream** *dataOut, **utils::BooleanStream** *bs) throw (**decaf::io::IOException**)

Write a object instance to data output stream.

- virtual void **looseUnmarshal** (**OpenWireFormat** *wireFormat, **commands::DataStructure** *dataStructure, **decaf::io::DataInputStream** *dataIn) throw (**decaf::io::IOException**)

Un-marshal an object instance from the data input stream.

- virtual void **looseMarshal** (**OpenWireFormat** *wireFormat, **commands::DataStructure** *dataStructure, **decaf::io::DataOutputStream** *dataOut) throw (**decaf::io::IOException**)

Write a object instance to data output stream.

6.110.1 Detailed Description

Marshaling code for Open Wire Format for **BaseCommandMarshaller** (p. 657). NOTE!: This file is auto generated - do not modify! if you need to make a change, please see the Java Classes in the activemq-openwire-generator module

6.110.2 Constructor & Destructor Documentation

6.110.2.1 `activemq::wireformat::openwire::marshal::v3::BaseCommandMarshaller::BaseCommandMarshaller()` [inline]

6.110.2.2 `virtual activemq::wireformat::openwire::marshal::v3::BaseCommandMarshaller::~~BaseCommandMarshaller()` [inline, virtual]

6.110.3 Member Function Documentation

6.110.3.1 `virtual void activemq::wireformat::openwire::marshal::v3::BaseCommandMarshaller::marshal(const OpenWireFormat * wireFormat, const commands::DataStructure * dataStructure, decaf::io::DataOutputStream * dataOut) throw (decaf::io::IOException)` [virtual]

Write a object instance to data output stream.

Parameters:

wireFormat - describes the wire format of the broker

dataStructure - Object to be marshaled

dataOut - BinaryWriter that provides that data sink

Exceptions:

IOException if an error occurs during the marshal.

Implements `activemq::wireformat::openwire::marshal::DataStreamMarshaller` (p. 1430).

Reimplemented in `activemq::wireformat::openwire::marshal::v3::ActiveMQBlobMessageMarshaller` (p. 178), `activemq::wireformat::openwire::marshal::v3::ActiveMQBytesMessageMarshaller` (p. 214), `activemq::wireformat::openwire::marshal::v3::ActiveMQMapMessageMarshaller` (p. 323), `activemq::wireformat::openwire::marshal::v3::ActiveMQMessageMarshaller` (p. 346), `activemq::wireformat::openwire::marshal::v3::ActiveMQObjectMessageMarshaller` (p. 387), `activemq::wireformat::openwire::marshal::v3::ActiveMQStreamMessageMarshaller` (p. 480), `activemq::wireformat::openwire::marshal::v3::ActiveMQTextMessageMarshaller` (p. 579), `activemq::wireformat::openwire::marshal::v3::BrokerInfoMarshaller` (p. 784), `activemq::wireformat::openwire::marshal::v3::ConnectionControlMarshaller` (p. 1141), `activemq::wireformat::openwire::marshal::v3::ConnectionErrorMarshaller` (p. 1165), `activemq::wireformat::openwire::marshal::v3::ConnectionInfoMarshaller` (p. 1218), `activemq::wireformat::openwire::marshal::v3::ConsumerControlMarshaller` (p. 1256), `activemq::wireformat::openwire::marshal::v3::ConsumerInfoMarshaller` (p. 1310), `activemq::wireformat::openwire::marshal::v3::ControlCommandMarshaller` (p. 1335), `activemq::wireformat::openwire::marshal::v3::DataArrayResponseMarshaller` (p. 1360), `activemq::wireformat::openwire::marshal::v3::DataResponseMarshaller` (p. 1399), `activemq::wireformat::openwire::marshal::v3::DestinationInfoMarshaller` (p. 1494), `activemq::wireformat::openwire::marshal::v3::ExceptionResponseMarshaller` (p. 1594), `activemq::wireformat::openwire::marshal::v3::FlushCommandMarshaller` (p. 1688), `activemq::wireformat::openwire::marshal::v3::IntegerResponseMarshaller` (p. 1789), `activemq::wireformat::openwire::marshal::v3::KeepAliveInfoMarshaller` (p. 1942), `activemq::wireformat::openwire::marshal::v3::MessageAckMarshaller` (p. 2203), `activemq::wireformat::openwire::marshal::v3::MessageDispatchMarshaller` (p. 2240), `activemq::wireformat::openwire::marshal::v3::MessageDispatchNotificationMarshaller`

(p. 2266), [activemq::wireformat::openwire::marshal::v3::MessageMarshaller](#) (p. 2316), [activemq::wireformat::openwire::marshal::v3::MessagePullMarshaller](#) (p. 2356), [activemq::wireformat::openwire::marshal::v3::ProducerAckMarshaller](#) (p. 2588), [activemq::wireformat::openwire::marshal::v3::ProducerInfoMarshaller](#) (p. 2653), [activemq::wireformat::openwire::marshal::v3::RemoveInfoMarshaller](#) (p. 2716), [activemq::wireformat::openwire::marshal::v3::RemoveSubscriptionInfoMarshaller](#) (p. 2745), [activemq::wireformat::openwire::marshal::v3::ReplayCommandMarshaller](#) (p. 2761), [activemq::wireformat::openwire::marshal::v3::ResponseMarshaller](#) (p. 2797), [activemq::wireformat::openwire::marshal::v3::SessionInfoMarshaller](#) (p. 2898), [activemq::wireformat::openwire::marshal::v3::ShutdownInfoMarshaller](#) (p. 2946), and [activemq::wireformat::openwire::marshal::v3::TransactionInfoMarshaller](#) (p. 3254).

6.110.3.2 virtual void [activemq::wireformat::openwire::marshal::v3::BaseCommandMarshaller::looseUnmarshal](#) ([OpenWireFormat](#) * *wireFormat*, [commands::DataStructure](#) * *dataStructure*, [decaf::io::DataInputStream](#) * *dataIn*) throw ([decaf::io::IOException](#)) [virtual]

Un-marshall an object instance from the data input stream.

Parameters:

- wireFormat* - describes the wire format of the broker
- dataStructure* - Object to be marshaled
- dataIn* - [BinaryReader](#) that provides that data source

Exceptions:

- IOException* if an error occurs during the unmarshal.

Implements [activemq::wireformat::openwire::marshal::DataStreamMarshaller](#) (p. 1436).

Reimplemented in [activemq::wireformat::openwire::marshal::v3::ActiveMQBlobMessageMarshaller](#) (p. 179), [activemq::wireformat::openwire::marshal::v3::ActiveMQBytesMessageMarshaller](#) (p. 215), [activemq::wireformat::openwire::marshal::v3::ActiveMQMapMessageMarshaller](#) (p. 324), [activemq::wireformat::openwire::marshal::v3::ActiveMQMessageMarshaller](#) (p. 347), [activemq::wireformat::openwire::marshal::v3::ActiveMQObjectMessageMarshaller](#) (p. 388), [activemq::wireformat::openwire::marshal::v3::ActiveMQStreamMessageMarshaller](#) (p. 481), [activemq::wireformat::openwire::marshal::v3::ActiveMQTextMessageMarshaller](#) (p. 580), [activemq::wireformat::openwire::marshal::v3::BrokerInfoMarshaller](#) (p. 785), [activemq::wireformat::openwire::marshal::v3::ConnectionControlMarshaller](#) (p. 1142), [activemq::wireformat::openwire::marshal::v3::ConnectionErrorMarshaller](#) (p. 1166), [activemq::wireformat::openwire::marshal::v3::ConnectionInfoMarshaller](#) (p. 1219), [activemq::wireformat::openwire::marshal::v3::ConsumerControlMarshaller](#) (p. 1257), [activemq::wireformat::openwire::marshal::v3::ConsumerInfoMarshaller](#) (p. 1311), [activemq::wireformat::openwire::marshal::v3::ControlCommandMarshaller](#) (p. 1336), [activemq::wireformat::openwire::marshal::v3::DataArrayResponseMarshaller](#) (p. 1361), [activemq::wireformat::openwire::marshal::v3::DataResponseMarshaller](#) (p. 1400), [activemq::wireformat::openwire::marshal::v3::DestinationInfoMarshaller](#) (p. 1495), [activemq::wireformat::openwire::marshal::v3::ExceptionResponseMarshaller](#) (p. 1595), [activemq::wireformat::openwire::marshal::v3::FlushCommandMarshaller](#) (p. 1689), [activemq::wireformat::openwire::marshal::v3::IntegerResponseMarshaller](#) (p. 1790), [activemq::wireformat::openwire::marshal::v3::KeepAliveInfoMarshaller](#) (p. 1943),

6.110.3.3 virtual int activemq::wireformat::openwire::marshal::v3::BaseCommandMarshaller::tightMarshal1
(OpenWireFormat * wireFormat, commands::DataStructure * dataStructure, utils::BooleanStream * bs) throw (decaf::io::IOException
) [virtual]

Write the booleans that this object uses to a BooleanStream.

Parameters:

wireFormat - describes the wire format of the broker

dataStructure - Object to be marshaled

bs - BooleanStream stream used to pack bits from the wire.

Returns:

int value indicating the size of the marshaled object.

Exceptions:

IOException if an error occurs during the marshal.

Implements **activemq::wireformat::openwire::marshal::DataStreamMarshaller** (p. 1442).

Reimplemented in **activemq::wireformat::openwire::marshal::v3::ActiveMQBlobMessageMarshaller** (p. 179), **activemq::wireformat::openwire::marshal::v3::ActiveMQBytesMessageMarshaller** (p. 215), **activemq::wireformat::openwire::marshal::v3::ActiveMQMapMessageMarshaller** (p. 324), **activemq::wireformat::openwire::marshal::v3::ActiveMQMessageMarshaller** (p. 347), **activemq::wireformat::openwire::marshal::v3::ActiveMQObjectMessageMarshaller** (p. 388), **activemq::wireformat::openwire::marshal::v3::ActiveMQStreamMessageMarshaller** (p. 481), **activemq::wireformat::openwire::marshal::v3::ActiveMQTextMessageMarshaller** (p. 580), **activemq::wireformat::openwire::marshal::v3::BrokerInfoMarshaller** (p. 785), **activemq::wireformat::openwire::marshal::v3::ConnectionControlMarshaller** (p. 1142), **activemq::wireformat::openwire::marshal::v3::ConnectionErrorMarshaller** (p. 1166), **activemq::wireformat::openwire::marshal::v3::ConnectionInfoMarshaller** (p. 1219), **activemq::wireformat::openwire::marshal::v3::ConsumerControlMarshaller** (p. 1257), **activemq::wireformat::openwire::marshal::v3::ConsumerInfoMarshaller** (p. 1311), **activemq::wireformat::openwire::marshal::v3::ControlCommandMarshaller** (p. 1336), **activemq::wireformat::openwire::marshal::v3::DataArrayResponseMarshaller** (p. 1361),

 (OpenWireFormat * *wireFormat*, commands::DataStructure
 * *dataStructure*, decaf::io::DataInputStream * *dataIn*,
 utils::BooleanStream * *bs*) throw (decaf::io::IOException) [virtual]

Un-marshall an object instance from the data input stream.

Parameters:

wireFormat - describes the wire format of the broker.
dataStructure - Object to be un-marshaled.
dataIn - BinaryReader that provides that data.
bs - BooleanStream stream used to unpack bits from the wire.

Exceptions:

IOException if an error occurs during the unmarshal.

Implements `activemq::wireformat::openwire::marshal::DataStreamMarshaller` (p. 1454).

Reimplemented in `activemq::wireformat::openwire::marshal::v3::ActiveMQBlobMessageMarshaller`

Write a object instance to data output stream.

6.111.1 Detailed Description

Marshaling code for Open Wire Format for **BaseCommandMarshaller** (p. 664). NOTE!: This file is auto generated - do not modify! if you need to make a change, please see the Java Classes in the activemq-openwire-generator module

6.111.2 Constructor & Destructor Documentation

- 6.111.2.1 `activemq::wireformat::openwire::marshal::v1::BaseCommandMarshaller::BaseCommandMarshaller()` `[inline]`
- 6.111.2.2 `virtual activemq::wireformat::openwire::marshal::v1::BaseCommandMarshaller::~~BaseCommandMarshaller()` `[inline, virtual]`

6.111.3 Member Function Documentation

- 6.111.3.1 `virtual void activemq::wireformat::openwire::marshal::v1::BaseCommandMarshaller::looseMarshal(OpenWireFormat * wireFormat, commands::DataStructure * dataStructure, decaf::io::DataOutputStream * dataOut) throw (decaf::io::IOException)` `[virtual]`

Write a object instance to data output stream.

Parameters:

- wireFormat* - describes the wire format of the broker
- dataStructure* - Object to be marshaled
- dataOut* - BinaryWriter that provides that data sink

Exceptions:

- IOException* if an error occurs during the marshal.

Implements `activemq::wireformat::openwire::marshal::DataStreamMarshaller` (p. 1430).

Reimplemented in `activemq::wireformat::openwire::marshal::v1::ActiveMQBlobMessageMarshaller` (p. 182), `activemq::wireformat::openwire::marshal::v1::ActiveMQBytesMessageMarshaller` (p. 218), `activemq::wireformat::openwire::marshal::v1::ActiveMQMapMessageMarshaller` (p. 327), `activemq::wireformat::openwire::marshal::v1::ActiveMQMessageMarshaller` (p. 350), `activemq::wireformat::openwire::marshal::v1::ActiveMQObjectMessageMarshaller` (p. 391), `activemq::wireformat::openwire::marshal::v1::ActiveMQStreamMessageMarshaller` (p. 484), `activemq::wireformat::openwire::marshal::v1::ActiveMQTextMessageMarshaller` (p. 583), `activemq::wireformat::openwire::marshal::v1::BrokerInfoMarshaller` (p. 788), `activemq::wireformat::openwire::marshal::v1::ConnectionControlMarshaller` (p. 1145), `activemq::wireformat::openwire::marshal::v1::ConnectionErrorMarshaller` (p. 1169), `activemq::wireformat::openwire::marshal::v1::ConnectionInfoMarshaller` (p. 1226), `activemq::wireformat::openwire::marshal::v1::ConsumerControlMarshaller` (p. 1264), `activemq::wireformat::openwire::marshal::v1::ConsumerInfoMarshaller` (p. 1314), `activemq::wireformat::openwire::marshal::v1::ControlCommandMarshaller` (p. 1343), `activemq::wireformat::openwire::marshal::v1::DataArrayResponseMarshaller` (p. 1368), `activemq::wireformat::openwire::marshal::v1::DataResponseMarshaller` (p. 1403), `activemq::wireformat::openwire::marshal::v1::DestinationInfoMarshaller` (p. 1502), `activemq::wireformat::openwire::marshal::v1::ExceptionResponseMarshaller` (p. 1590), `activemq::wireformat::openwire::marshal::v1::FlushCommandMarshaller` (p. 1684), `activemq::wireformat::openwire::marshal::v1::IntegerResponseMarshaller` (p. 1785), `activemq::wireformat::openwire::marshal::v1::KeepAliveInfoMarshaller` (p. 1950), `activemq::wireformat::openwire::marshal::v1::MessageAckMarshaller` (p. 2211), `activemq::wireformat::openwire::marshal::v1::MessageDispatchMarshaller` (p. 2244), `activemq::wireformat::openwire::marshal::v1::MessageDispatchNotificationMarshaller`

(p. 2270), `activemq::wireformat::openwire::marshal::v1::MessageMarshaller` (p. 2326), `activemq::wireformat::openwire::marshal::v1::MessagePullMarshaller` (p. 2360), `activemq::wireformat::openwire::marshal::v1::ProducerAckMarshaller` (p. 2600), `activemq::wireformat::openwire::marshal::v1::ProducerInfoMarshaller` (p. 2649), `activemq::wireformat::openwire::marshal::v1::RemoveInfoMarshaller` (p. 2708), `activemq::wireformat::openwire::marshal::v1::RemoveSubscriptionInfoMarshaller` (p. 2741), `activemq::wireformat::openwire::marshal::v1::ReplayCommandMarshaller` (p. 2773), `activemq::wireformat::openwire::marshal::v1::ResponseMarshaller` (p. 2807), `activemq::wireformat::openwire::marshal::v1::SessionInfoMarshaller` (p. 2882), `activemq::wireformat::openwire::marshal::v1::ShutdownInfoMarshaller` (p. 2938), and `activemq::wireformat::openwire::marshal::v1::TransactionInfoMarshaller` (p. 3246).

6.111.3.2 virtual void `activemq::wireformat::openwire::marshal::v1::BaseCommandMarshaller::looseUnmarshal`
**(`OpenWireFormat * wireFormat`, `commands::DataStructure`
`* dataStructure`, `decaf::io::DataInputStream * dataIn`) throw (`decaf::io::IOException`)** [virtual]

Un-marshal an object instance from the data input stream.

Parameters:

wireFormat - describes the wire format of the broker

dataStructure - Object to be marshaled

dataIn - BinaryReader that provides that data source

Exceptions:

IOException if an error occurs during the unmarshal.

Implements `activemq::wireformat::openwire::marshal::DataStreamMarshaller` (p. 1436).

Reimplemented in `activemq::wireformat::openwire::marshal::v1::ActiveMQBlobMessageMarshaller` (p. 183), `activemq::wireformat::openwire::marshal::v1::ActiveMQBytesMessageMarshaller` (p. 219), `activemq::wireformat::openwire::marshal::v1::ActiveMQMapMessageMarshaller` (p. 328), `activemq::wireformat::openwire::marshal::v1::ActiveMQMessageMarshaller` (p. 351), `activemq::wireformat::openwire::marshal::v1::ActiveMQObjectMessageMarshaller` (p. 392), `activemq::wireformat::openwire::marshal::v1::ActiveMQStreamMessageMarshaller` (p. 485), `activemq::wireformat::openwire::marshal::v1::ActiveMQTextMessageMarshaller` (p. 584), `activemq::wireformat::openwire::marshal::v1::BrokerInfoMarshaller` (p. 789), `activemq::wireformat::openwire::marshal::v1::ConnectionControlMarshaller` (p. 1146), `activemq::wireformat::openwire::marshal::v1::ConnectionErrorMarshaller` (p. 1170), `activemq::wireformat::openwire::marshal::v1::ConnectionInfoMarshaller` (p. 1227), `activemq::wireformat::openwire::marshal::v1::ConsumerControlMarshaller` (p. 1265), `activemq::wireformat::openwire::marshal::v1::ConsumerInfoMarshaller` (p. 1315), `activemq::wireformat::openwire::marshal::v1::ControlCommandMarshaller` (p. 1344), `activemq::wireformat::openwire::marshal::v1::DataArrayResponseMarshaller` (p. 1369), `activemq::wireformat::openwire::marshal::v1::DataResponseMarshaller` (p. 1404), `activemq::wireformat::openwire::marshal::v1::DestinationInfoMarshaller` (p. 1503), `activemq::wireformat::openwire::marshal::v1::ExceptionResponseMarshaller` (p. 1591), `activemq::wireformat::openwire::marshal::v1::FlushCommandMarshaller` (p. 1685), `activemq::wireformat::openwire::marshal::v1::IntegerResponseMarshaller` (p. 1786), `activemq::wireformat::openwire::marshal::v1::KeepAliveInfoMarshaller` (p. 1951),

activemq::wireformat::openwire::marshal::v1::MessageAckMarshaller (p. 2212), activemq::wireformat::openwire::marshal::v1::MessageDispatchMarshaller (p. 2245), activemq::wireformat::openwire::marshal::v1::MessageDispatchNotificationMarshaller (p. 2271), activemq::wireformat::openwire::marshal::v1::MessageMarshaller (p. 2326), activemq::wireformat::openwire::marshal::v1::MessagePullMarshaller (p. 2361), activemq::wireformat::openwire::marshal::v1::ProducerAckMarshaller (p. 2601), activemq::wireformat::openwire::marshal::v1::ProducerInfoMarshaller (p. 2650), activemq::wireformat::openwire::marshal::v1::RemoveInfoMarshaller (p. 2709), activemq::wireformat::openwire::marshal::v1::RemoveSubscriptionInfoMarshaller (p. 2742), activemq::wireformat::openwire::marshal::v1::ReplayCommandMarshaller (p. 2774), activemq::wireformat::openwire::marshal::v1::ResponseMarshaller (p. 2808), activemq::wireformat::openwire::marshal::v1::SessionInfoMarshaller (p. 2883), activemq::wireformat::openwire::marshal::v1::ShutdownInfoMarshaller (p. 2939), and activemq::wireformat::openwire::marshal::v1::TransactionInfoMarshaller (p. 3247).

6.111.3.3 virtual int activemq::wireformat::openwire::marshal::v1::BaseCommandMarshaller::tightMarshal1 (OpenWireFormat * *wireFormat*, commands::DataStructure * *dataStructure*, utils::BooleanStream * *bs*) throw (decaf::io::IOException) [virtual]

Write the booleans that this object uses to a BooleanStream.

Parameters:

- wireFormat* - describes the wire format of the broker
- dataStructure* - Object to be marshaled
- bs* - BooleanStream stream used to pack bits from the wire.

Returns:

int value indicating the size of the marshaled object.

Exceptions:

IOException if an error occurs during the marshal.

Implements **activemq::wireformat::openwire::marshal::DataStreamMarshaller** (p. 1442).

6.111.3.4 virtual void ac-

activemq::wireformat::openwire::marshal::v1::BaseCommandMarshaller::tightMarshal2
 (OpenWireFormat * *wireFormat*, commands::DataStructure
 * *dataStructure*, decaf::io::DataOutputStream * *dataOut*,
 utils::BooleanStream * *bs*) throw (decaf::io::IOException) [virtual]

Write a object instance to data output stream.

Parameters:

wireFormat - describes the wire format of the broker
dataStructure - Object to be marshaled
dataOut - BinaryReader that provides that data sink
bs - BooleanStream stream used to pack bits from the wire.

Exceptions:

IOException if an error occurs during the marshal.

 (OpenWireFormat * *wireFormat*, commands::DataStructure
 * *dataStructure*, decaf::io::DataInputStream * *dataIn*,
 utils::BooleanStream * *bs*) throw (decaf::io::IOException) [virtual]

Un-marshall an object instance from the data input stream.

Parameters:

wireFormat - describes the wire format of the broker.
dataStructure - Object to be un-marshaled.
dataIn - BinaryReader that provides that data.
bs - BooleanStream stream used to unpack bits from the wire.

Exceptions:

IOException if an error occurs during the unmarshal.

Implements `activemq::wireformat::openwire::marshal::DataStreamMarshaller` (p. 1454).

Reimplemented in `activemq::wireformat::openwire::marshal::v1::ActiveMQBlobMessageMarshaller`

Write a object instance to data output stream.

6.112.1 Detailed Description

Marshaling code for Open Wire Format for **BaseCommandMarshaller** (p. 671). NOTE!: This file is auto generated - do not modify! if you need to make a change, please see the Java Classes in the activemq-openwire-generator module

6.112.2 Constructor & Destructor Documentation

6.112.2.1 `activemq::wireformat::openwire::marshal::v4::BaseCommandMarshaller::BaseCommandMarshaller()` [inline]

6.112.2.2 `virtual activemq::wireformat::openwire::marshal::v4::BaseCommandMarshaller::~~BaseCommandMarshaller()` [inline, virtual]

6.112.3 Member Function Documentation

6.112.3.1 `virtual void activemq::wireformat::openwire::marshal::v4::BaseCommandMarshaller::marshal(const OpenWireFormat * wireFormat, const commands::DataStructure * dataStructure, decaf::io::DataOutputStream * dataOut) throw (decaf::io::IOException)` [virtual]

Write a object instance to data output stream.

Parameters:

wireFormat - describes the wire format of the broker

dataStructure - Object to be marshaled

dataOut - BinaryWriter that provides that data sink

Exceptions:

IOException if an error occurs during the marshal.

Implements `activemq::wireformat::openwire::marshal::DataStreamMarshaller` (p. 1430).

Reimplemented in `activemq::wireformat::openwire::marshal::v4::ActiveMQBlobMessageMarshaller` (p. 186), `activemq::wireformat::openwire::marshal::v4::ActiveMQBytesMessageMarshaller` (p. 222), `activemq::wireformat::openwire::marshal::v4::ActiveMQMapMessageMarshaller` (p. 331), `activemq::wireformat::openwire::marshal::v4::ActiveMQMessageMarshaller` (p. 354), `activemq::wireformat::openwire::marshal::v4::ActiveMQObjectMessageMarshaller` (p. 395), `activemq::wireformat::openwire::marshal::v4::ActiveMQStreamMessageMarshaller` (p. 488), `activemq::wireformat::openwire::marshal::v4::ActiveMQTextMessageMarshaller` (p. 587), `activemq::wireformat::openwire::marshal::v4::BrokerInfoMarshaller` (p. 792), `activemq::wireformat::openwire::marshal::v4::ConnectionControlMarshaller` (p. 1149), `activemq::wireformat::openwire::marshal::v4::ConnectionErrorMarshaller` (p. 1173), `activemq::wireformat::openwire::marshal::v4::ConnectionInfoMarshaller` (p. 1222), `activemq::wireformat::openwire::marshal::v4::ConsumerControlMarshaller` (p. 1260), `activemq::wireformat::openwire::marshal::v4::ConsumerInfoMarshaller` (p. 1318), `activemq::wireformat::openwire::marshal::v4::ControlCommandMarshaller` (p. 1339), `activemq::wireformat::openwire::marshal::v4::DataArrayResponseMarshaller` (p. 1364), `activemq::wireformat::openwire::marshal::v4::DataResponseMarshaller` (p. 1411), `activemq::wireformat::openwire::marshal::v4::DestinationInfoMarshaller` (p. 1498), `activemq::wireformat::openwire::marshal::v4::ExceptionResponseMarshaller` (p. 1598), `activemq::wireformat::openwire::marshal::v4::FlushCommandMarshaller` (p. 1692), `activemq::wireformat::openwire::marshal::v4::IntegerResponseMarshaller` (p. 1793), `activemq::wireformat::openwire::marshal::v4::KeepAliveInfoMarshaller` (p. 1946), `activemq::wireformat::openwire::marshal::v4::MessageAckMarshaller` (p. 2207), `activemq::wireformat::openwire::marshal::v4::MessageDispatchMarshaller` (p. 2236), `activemq::wireformat::openwire::marshal::v4::MessageDispatchNotificationMarshaller`

6.112.3.2 virtual void activemq::wireformat::openwire::marshal::v4::BaseCommandMarshaller::looseUnmarshal (OpenWireFormat * *wireFormat*, commands::DataStructure * *dataStructure*, decaf::io::DataInputStream * *dataIn*) throw (decaf::io::IOException) [virtual]

Un-marshall an object instance from the data input stream.

Parameters:

- wireFormat* - describes the wire format of the broker
- dataStructure* - Object to be marshaled
- dataIn* - BinaryReader that provides that data source

Exceptions:

- IOException* if an error occurs during the unmarshal.

Implements [activemq::wireformat::openwire::marshal::DataStreamMarshaller](#) (p. 1436).

Reimplemented in [activemq::wireformat::openwire::marshal::v4::ActiveMQBlobMessageMarshaller](#) (p. 187), [activemq::wireformat::openwire::marshal::v4::ActiveMQBytesMessageMarshaller](#) (p. 223), [activemq::wireformat::openwire::marshal::v4::ActiveMQMapMessageMarshaller](#) (p. 332), [activemq::wireformat::openwire::marshal::v4::ActiveMQMessageMarshaller](#) (p. 355), [activemq::wireformat::openwire::marshal::v4::ActiveMQObjectMessageMarshaller](#) (p. 396), [activemq::wireformat::openwire::marshal::v4::ActiveMQStreamMessageMarshaller](#) (p. 489), [activemq::wireformat::openwire::marshal::v4::ActiveMQTextMessageMarshaller](#) (p. 588), [activemq::wireformat::openwire::marshal::v4::BrokerInfoMarshaller](#) (p. 793), [activemq::wireformat::openwire::marshal::v4::ConnectionControlMarshaller](#) (p. 1150), [activemq::wireformat::openwire::marshal::v4::ConnectionErrorMarshaller](#) (p. 1174), [activemq::wireformat::openwire::marshal::v4::ConnectionInfoMarshaller](#) (p. 1223), [activemq::wireformat::openwire::marshal::v4::ConsumerControlMarshaller](#) (p. 1261), [activemq::wireformat::openwire::marshal::v4::ConsumerInfoMarshaller](#) (p. 1319), [activemq::wireformat::openwire::marshal::v4::ControlCommandMarshaller](#) (p. 1340), [activemq::wireformat::openwire::marshal::v4::DataArrayResponseMarshaller](#) (p. 1365), [activemq::wireformat::openwire::marshal::v4::DataResponseMarshaller](#) (p. 1412), [activemq::wireformat::openwire::marshal::v4::DestinationInfoMarshaller](#) (p. 1499), [activemq::wireformat::openwire::marshal::v4::ExceptionResponseMarshaller](#) (p. 1599), [activemq::wireformat::openwire::marshal::v4::FlushCommandMarshaller](#) (p. 1693), [activemq::wireformat::openwire::marshal::v4::IntegerResponseMarshaller](#) (p. 1794), [activemq::wireformat::openwire::marshal::v4::KeepAliveInfoMarshaller](#) (p. 1947),

6.112.3.3 virtual int activemq::wireformat::openwire::marshal::v4::BaseCommandMarshaller::tightMarshal1
(OpenWireFormat * wireFormat, commands::DataStructure * dataStructure, utils::BooleanStream * bs) throw (decaf::io::IOException
) [virtual]

Write the booleans that this object uses to a BooleanStream.

Parameters:

wireFormat - describes the wire format of the broker
dataStructure - Object to be marshaled
bs - BooleanStream stream used to pack bits from the wire.

Returns:

int value indicating the size of the marshaled object.

Exceptions:

IOException if an error occurs during the marshal.

Implements **activemq::wireformat::openwire::marshal::DataStreamMarshaller** (p. 1442).

Reimplemented in **activemq::wireformat::openwire::marshal::v4::ActiveMQBlobMessageMarshaller** (p. 187), **activemq::wireformat::openwire::marshal::v4::ActiveMQBytesMessageMarshaller** (p. 223), **activemq::wireformat::openwire::marshal::v4::ActiveMQMapMessageMarshaller** (p. 332), **activemq::wireformat::openwire::marshal::v4::ActiveMQMessageMarshaller** (p. 355), **activemq::wireformat::openwire::marshal::v4::ActiveMQObjectMessageMarshaller** (p. 396), **activemq::wireformat::openwire::marshal::v4::ActiveMQStreamMessageMarshaller** (p. 489), **activemq::wireformat::openwire::marshal::v4::ActiveMQTextMessageMarshaller** (p. 588), **activemq::wireformat::openwire::marshal::v4::BrokerInfoMarshaller** (p. 793), **activemq::wireformat::openwire::marshal::v4::ConnectionControlMarshaller** (p. 1150), **activemq::wireformat::openwire::marshal::v4::ConnectionErrorMarshaller** (p. 1174), **activemq::wireformat::openwire::marshal::v4::ConnectionInfoMarshaller** (p. 1223), **activemq::wireformat::openwire::marshal::v4::ConsumerControlMarshaller** (p. 1261), **activemq::wireformat::openwire::marshal::v4::ConsumerInfoMarshaller** (p. 1319), **activemq::wireformat::openwire::marshal::v4::ControlCommandMarshaller** (p. 1340), **activemq::wireformat::openwire::marshal::v4::DataArrayResponseMarshaller** (p. 1365),

 tivemq::wireformat::openwire::marshal::v4::BaseCommandMarshaller::tightUnmarshal
 (OpenWireFormat * *wireFormat*, commands::DataStructure
 * *dataStructure*, decaf::io::DataInputStream * *dataIn*,
 utils::BooleanStream * *bs*) throw (decaf::io::IOException) [virtual]

Un-marshall an object instance from the data input stream.

Parameters:

wireFormat - describes the wire format of the broker.
dataStructure - Object to be un-marshaled.
dataIn - BinaryReader that provides that data.
bs - BooleanStream stream used to unpack bits from the wire.

Exceptions:

IOException if an error occurs during the unmarshal.

Implements `activemq::wireformat::openwire::marshal::DataStreamMarshaller` (p. 1454).

Reimplemented in `activemq::wireformat::openwire::marshal::v4::ActiveMQBlobMessageMarshaller`
 (p. 188), `activemq::wireformat::openwire::marshal::v4::ActiveMQBytesMessageMarshaller`

- 6.113.2.2** `virtual activemq::wireformat::openwire::marshal::v5::BaseCommandMarshaller::~~BaseCommandMarshaller()` `[inline, virtual]`

6.113.3 Member Function Documentation

- 6.113.3.1** `virtual void activemq::wireformat::openwire::marshal::v5::BaseCommandMarshaller::looseMarshal(OpenWireFormat * wireFormat, commands::DataStructure * dataStructure, decaf::io::DataOutputStream * dataOut) throw (decaf::io::IOException)` `[virtual]`

Write a object instance to data output stream.

Parameters:

- wireFormat* - describes the wire format of the broker
- dataStructure* - Object to be marshaled
- dataOut* - BinaryWriter that provides that data sink

Exceptions:

- IOException* if an error occurs during the marshal.

Implements `activemq::wireformat::openwire::marshal::DataStreamMarshaller` (p. 1430).

Reimplemented in `activemq::wireformat::openwire::marshal::v5::ActiveMQBlobMessageMarshaller` (p. 190), `activemq::wireformat::openwire::marshal::v5::ActiveMQBytesMessageMarshaller` (p. 226), `activemq::wireformat::openwire::marshal::v5::ActiveMQMapMessageMarshaller` (p. 335), `activemq::wireformat::openwire::marshal::v5::ActiveMQMessageMarshaller` (p. 358), `activemq::wireformat::openwire::marshal::v5::ActiveMQObjectMessageMarshaller` (p. 399), `activemq::wireformat::openwire::marshal::v5::ActiveMQStreamMessageMarshaller` (p. 492), `activemq::wireformat::openwire::marshal::v5::ActiveMQTextMessageMarshaller` (p. 591), `activemq::wireformat::openwire::marshal::v5::BrokerInfoMarshaller` (p. 796), `activemq::wireformat::openwire::marshal::v5::ConnectionControlMarshaller` (p. 1153), `activemq::wireformat::openwire::marshal::v5::ConnectionErrorMarshaller` (p. 1177), `activemq::wireformat::openwire::marshal::v5::ConnectionInfoMarshaller` (p. 1230), `activemq::wireformat::openwire::marshal::v5::ConsumerControlMarshaller` (p. 1268), `activemq::wireformat::openwire::marshal::v5::ConsumerInfoMarshaller` (p. 1322), `activemq::wireformat::openwire::marshal::v5::ControlCommandMarshaller` (p. 1347), `activemq::wireformat::openwire::marshal::v5::DataArrayResponseMarshaller` (p. 1372), `activemq::wireformat::openwire::marshal::v5::DataResponseMarshaller` (p. 1407), `activemq::wireformat::openwire::marshal::v5::DestinationInfoMarshaller` (p. 1506), `activemq::wireformat::openwire::marshal::v5::ExceptionResponseMarshaller` (p. 1602), `activemq::wireformat::openwire::marshal::v5::FlushCommandMarshaller` (p. 1696), `activemq::wireformat::openwire::marshal::v5::IntegerResponseMarshaller` (p. 1797), `activemq::wireformat::openwire::marshal::v5::KeepAliveInfoMarshaller` (p. 1938), `activemq::wireformat::openwire::marshal::v5::MessageAckMarshaller` (p. 2199), `activemq::wireformat::openwire::marshal::v5::MessageDispatchMarshaller` (p. 2248), `activemq::wireformat::openwire::marshal::v5::MessageDispatchNotificationMarshaller`

(p. 2274), `activemq::wireformat::openwire::marshal::v5::MessageMarshaller` (p. 2321), `activemq::wireformat::openwire::marshal::v5::MessagePullMarshaller` (p. 2364), `activemq::wireformat::openwire::marshal::v5::ProducerAckMarshaller` (p. 2596), `activemq::wireformat::openwire::marshal::v5::ProducerInfoMarshaller` (p. 2641), `activemq::wireformat::openwire::marshal::v5::RemoveInfoMarshaller` (p. 2724), `activemq::wireformat::openwire::marshal::v5::RemoveSubscriptionInfoMarshaller` (p. 2733), `activemq::wireformat::openwire::marshal::v5::ReplayCommandMarshaller` (p. 2765), `activemq::wireformat::openwire::marshal::v5::ResponseMarshaller` (p. 2802), `activemq::wireformat::openwire::marshal::v5::SessionInfoMarshaller` (p. 2894), `activemq::wireformat::openwire::marshal::v5::ShutdownInfoMarshaller` (p. 2954), and `activemq::wireformat::openwire::marshal::v5::TransactionInfoMarshaller` (p. 3258).

6.113.3.2 virtual void `activemq::wireformat::openwire::marshal::v5::BaseCommandMarshaller::looseUnmarshal`
**(`OpenWireFormat * wireFormat`, `commands::DataStructure`
`* dataStructure`, `decaf::io::DataInputStream * dataIn`) throw (`decaf::io::IOException`)** [virtual]

Un-marshall an object instance from the data input stream.

Parameters:

wireFormat - describes the wire format of the broker

dataStructure - Object to be marshaled

dataIn - BinaryReader that provides that data source

Exceptions:

IOException if an error occurs during the unmarshal.

Implements `activemq::wireformat::openwire::marshal::DataStreamMarshaller` (p. 1436).

Reimplemented in `activemq::wireformat::openwire::marshal::v5::ActiveMQBlobMessageMarshaller` (p. 191), `activemq::wireformat::openwire::marshal::v5::ActiveMQBytesMessageMarshaller` (p. 227), `activemq::wireformat::openwire::marshal::v5::ActiveMQMapMessageMarshaller` (p. 336), `activemq::wireformat::openwire::marshal::v5::ActiveMQMessageMarshaller` (p. 359), `activemq::wireformat::openwire::marshal::v5::ActiveMQObjectMessageMarshaller` (p. 400), `activemq::wireformat::openwire::marshal::v5::ActiveMQStreamMessageMarshaller` (p. 493), `activemq::wireformat::openwire::marshal::v5::ActiveMQTextMessageMarshaller` (p. 592), `activemq::wireformat::openwire::marshal::v5::BrokerInfoMarshaller` (p. 797), `activemq::wireformat::openwire::marshal::v5::ConnectionControlMarshaller` (p. 1154), `activemq::wireformat::openwire::marshal::v5::ConnectionErrorMarshaller` (p. 1178), `activemq::wireformat::openwire::marshal::v5::ConnectionInfoMarshaller` (p. 1231), `activemq::wireformat::openwire::marshal::v5::ConsumerControlMarshaller` (p. 1269), `activemq::wireformat::openwire::marshal::v5::ConsumerInfoMarshaller` (p. 1323), `activemq::wireformat::openwire::marshal::v5::ControlCommandMarshaller` (p. 1348), `activemq::wireformat::openwire::marshal::v5::DataArrayResponseMarshaller` (p. 1373), `activemq::wireformat::openwire::marshal::v5::DataResponseMarshaller` (p. 1408), `activemq::wireformat::openwire::marshal::v5::DestinationInfoMarshaller` (p. 1507), `activemq::wireformat::openwire::marshal::v5::ExceptionResponseMarshaller` (p. 1603), `activemq::wireformat::openwire::marshal::v5::FlushCommandMarshaller` (p. 1697), `activemq::wireformat::openwire::marshal::v5::IntegerResponseMarshaller` (p. 1798), `activemq::wireformat::openwire::marshal::v5::KeepAliveInfoMarshaller` (p. 1939),

6.113.3.3 virtual int `activemq::wireformat::openwire::marshal::v5::BaseCommandMarshaller::tightMarshal1`
 (OpenWireFormat * *wireFormat*, commands::DataStructure * *dataStructure*, utils::BooleanStream * *bs*) throw (decaf::io::IOException
) [virtual]

Write the booleans that this object uses to a BooleanStream.

Parameters:

- wireFormat* - describes the wire format of the broker
- dataStructure* - Object to be marshaled
- bs* - BooleanStream stream used to pack bits from the wire.

Returns:

int value indicating the size of the marshaled object.

Exceptions:

IOException if an error occurs during the marshal.

Implements `activemq::wireformat::openwire::marshal::DataStreamMarshaller` (p. 1442).

Reimplemented in `activemq::wireformat::openwire::marshal::v5::ActiveMQBlobMessageMarshaller` (p. 191),

Write a object instance to data output stream.

6.114.1 Detailed Description

Marshaling code for Open Wire Format for **BaseCommandMarshaller** (p. 685). NOTE!: This file is auto generated - do not modify! if you need to make a change, please see the Java Classes in the activemq-openwire-generator module

6.114.2 Constructor & Destructor Documentation

6.114.2.1 `activemq::wireformat::openwire::marshal::v2::BaseCommandMarshaller::BaseCommandMarshaller()` [inline]

6.114.2.2 `virtual activemq::wireformat::openwire::marshal::v2::BaseCommandMarshaller::~~BaseCommandMarshaller()` [inline, virtual]

6.114.3 Member Function Documentation

6.114.3.1 `virtual void activemq::wireformat::openwire::marshal::v2::BaseCommandMarshaller::marshal(const OpenWireFormat * wireFormat, const commands::DataStructure * dataStructure, decaf::io::DataOutputStream * dataOut) throw (decaf::io::IOException)` [virtual]

Write a object instance to data output stream.

Parameters:

wireFormat - describes the wire format of the broker

dataStructure - Object to be marshaled

dataOut - BinaryWriter that provides that data sink

Exceptions:

IOException if an error occurs during the marshal.

Implements `activemq::wireformat::openwire::marshal::DataStreamMarshaller` (p. 1430).

Reimplemented in `activemq::wireformat::openwire::marshal::v2::ActiveMQBlobMessageMarshaller` (p. 194), `activemq::wireformat::openwire::marshal::v2::ActiveMQBytesMessageMarshaller` (p. 230), `activemq::wireformat::openwire::marshal::v2::ActiveMQMapMessageMarshaller` (p. 339), `activemq::wireformat::openwire::marshal::v2::ActiveMQMessageMarshaller` (p. 362), `activemq::wireformat::openwire::marshal::v2::ActiveMQObjectMessageMarshaller` (p. 403), `activemq::wireformat::openwire::marshal::v2::ActiveMQStreamMessageMarshaller` (p. 496), `activemq::wireformat::openwire::marshal::v2::ActiveMQTextMessageMarshaller` (p. 595), `activemq::wireformat::openwire::marshal::v2::BrokerInfoMarshaller` (p. 800), `activemq::wireformat::openwire::marshal::v2::ConnectionControlMarshaller` (p. 1157), `activemq::wireformat::openwire::marshal::v2::ConnectionErrorMarshaller` (p. 1181), `activemq::wireformat::openwire::marshal::v2::ConnectionInfoMarshaller` (p. 1234), `activemq::wireformat::openwire::marshal::v2::ConsumerControlMarshaller` (p. 1272), `activemq::wireformat::openwire::marshal::v2::ConsumerInfoMarshaller` (p. 1326), `activemq::wireformat::openwire::marshal::v2::ControlCommandMarshaller` (p. 1351), `activemq::wireformat::openwire::marshal::v2::DataArrayResponseMarshaller` (p. 1376), `activemq::wireformat::openwire::marshal::v2::DataResponseMarshaller` (p. 1415), `activemq::wireformat::openwire::marshal::v2::DestinationInfoMarshaller` (p. 1490), `activemq::wireformat::openwire::marshal::v2::ExceptionResponseMarshaller` (p. 1586), `activemq::wireformat::openwire::marshal::v2::FlushCommandMarshaller` (p. 1680), `activemq::wireformat::openwire::marshal::v2::IntegerResponseMarshaller` (p. 1781), `activemq::wireformat::openwire::marshal::v2::KeepAliveInfoMarshaller` (p. 1934), `activemq::wireformat::openwire::marshal::v2::MessageAckMarshaller` (p. 2195), `activemq::wireformat::openwire::marshal::v2::MessageDispatchMarshaller` (p. 2232), `activemq::wireformat::openwire::marshal::v2::MessageDispatchNotificationMarshaller`

(p. 2258), [activemq::wireformat::openwire::marshal::v2::MessageMarshaller](#) (p. 2306), [activemq::wireformat::openwire::marshal::v2::MessagePullMarshaller](#) (p. 2352), [activemq::wireformat::openwire::marshal::v2::ProducerAckMarshaller](#) (p. 2584), [activemq::wireformat::openwire::marshal::v2::ProducerInfoMarshaller](#) (p. 2637), [activemq::wireformat::openwire::marshal::v2::RemoveInfoMarshaller](#) (p. 2712), [activemq::wireformat::openwire::marshal::v2::RemoveSubscriptionInfoMarshaller](#) (p. 2737), [activemq::wireformat::openwire::marshal::v2::ReplayCommandMarshaller](#) (p. 2757), [activemq::wireformat::openwire::marshal::v2::ResponseMarshaller](#) (p. 2792), [activemq::wireformat::openwire::marshal::v2::SessionInfoMarshaller](#) (p. 2890), [activemq::wireformat::openwire::marshal::v2::ShutdownInfoMarshaller](#) (p. 2950), and [activemq::wireformat::openwire::marshal::v2::TransactionInfoMarshaller](#) (p. 3262).

6.114.3.2 virtual void activemq::wireformat::openwire::marshal::v2::BaseCommandMarshaller::looseUnmarshal (OpenWireFormat * *wireFormat*, commands::DataStructure * *dataStructure*, decaf::io::DataInputStream * *dataIn*) throw (decaf::io::IOException) [virtual]

Un-marshall an object instance from the data input stream.

Parameters:

- wireFormat* - describes the wire format of the broker
- dataStructure* - Object to be marshaled
- dataIn* - BinaryReader that provides that data source

Exceptions:

- IOException* if an error occurs during the unmarshal.

Implements [activemq::wireformat::openwire::marshal::DataStreamMarshaller](#) (p. 1436).

Reimplemented in [activemq::wireformat::openwire::marshal::v2::ActiveMQBlobMessageMarshaller](#) (p. 195), [activemq::wireformat::openwire::marshal::v2::ActiveMQBytesMessageMarshaller](#) (p. 231), [activemq::wireformat::openwire::marshal::v2::ActiveMQMapMessageMarshaller](#) (p. 340), [activemq::wireformat::openwire::marshal::v2::ActiveMQMessageMarshaller](#) (p. 363), [activemq::wireformat::openwire::marshal::v2::ActiveMQObjectMessageMarshaller](#) (p. 404), [activemq::wireformat::openwire::marshal::v2::ActiveMQStreamMessageMarshaller](#) (p. 497), [activemq::wireformat::openwire::marshal::v2::ActiveMQTextMessageMarshaller](#) (p. 596), [activemq::wireformat::openwire::marshal::v2::BrokerInfoMarshaller](#) (p. 801), [activemq::wireformat::openwire::marshal::v2::ConnectionControlMarshaller](#) (p. 1158), [activemq::wireformat::openwire::marshal::v2::ConnectionErrorMarshaller](#) (p. 1182), [activemq::wireformat::openwire::marshal::v2::ConnectionInfoMarshaller](#) (p. 1235), [activemq::wireformat::openwire::marshal::v2::ConsumerControlMarshaller](#) (p. 1273), [activemq::wireformat::openwire::marshal::v2::ConsumerInfoMarshaller](#) (p. 1327), [activemq::wireformat::openwire::marshal::v2::ControlCommandMarshaller](#) (p. 1352), [activemq::wireformat::openwire::marshal::v2::DataArrayResponseMarshaller](#) (p. 1377), [activemq::wireformat::openwire::marshal::v2::DataResponseMarshaller](#) (p. 1416), [activemq::wireformat::openwire::marshal::v2::DestinationInfoMarshaller](#) (p. 1491), [activemq::wireformat::openwire::marshal::v2::ExceptionResponseMarshaller](#) (p. 1587), [activemq::wireformat::openwire::marshal::v2::FlushCommandMarshaller](#) (p. 1681), [activemq::wireformat::openwire::marshal::v2::IntegerResponseMarshaller](#) (p. 1782), [activemq::wireformat::openwire::marshal::v2::KeepAliveInfoMarshaller](#) (p. 1935),

activemq::wireformat::openwire::marshal::v2::MessageAckMarshaller (p. 2196), **activemq::wireformat::openwire::marshal::v2::MessageDispatchMarshaller** (p. 2233), **activemq::wireformat::openwire::marshal::v2::MessageDispatchNotificationMarshaller** (p. 2259), **activemq::wireformat::openwire::marshal::v2::MessageMarshaller** (p. 2306), **activemq::wireformat::openwire::marshal::v2::MessagePullMarshaller** (p. 2353), **activemq::wireformat::openwire::marshal::v2::ProducerAckMarshaller** (p. 2585), **activemq::wireformat::openwire::marshal::v2::ProducerInfoMarshaller** (p. 2638), **activemq::wireformat::openwire::marshal::v2::RemoveInfoMarshaller** (p. 2713), **activemq::wireformat::openwire::marshal::v2::RemoveSubscriptionInfoMarshaller** (p. 2738), **activemq::wireformat::openwire::marshal::v2::ReplayCommandMarshaller** (p. 2758), **activemq::wireformat::openwire::marshal::v2::ResponseMarshaller** (p. 2793), **activemq::wireformat::openwire::marshal::v2::SessionInfoMarshaller** (p. 2891), **activemq::wireformat::openwire::marshal::v2::ShutdownInfoMarshaller** (p. 2951), and **activemq::wireformat::openwire::marshal::v2::TransactionInfoMarshaller** (p. 3263).

6.114.3.3 virtual int activemq::wireformat::openwire::marshal::v2::BaseCommandMarshaller::tightMarshal1
(OpenWireFormat * wireFormat, commands::DataStructure * dataStructure, utils::BooleanStream * bs) throw (decaf::io::IOException
) [virtual]

Write the booleans that this object uses to a BooleanStream.

Parameters:

wireFormat - describes the wire format of the broker
dataStructure - Object to be marshaled
bs - BooleanStream stream used to pack bits from the wire.

Returns:

int value indicating the size of the marshaled object.

Exceptions:

IOException if an error occurs during the marshal.

Implements **activemq::wireformat::openwire::marshal::DataStreamMarshaller** (p. 1442).

Reimplemented in **activemq::wireformat::openwire::marshal::v2::ActiveMQBlobMessageMarshaller** (p. 195), **activemq::wireformat::openwire::marshal::v2::ActiveMQBytesMessageMarshaller** (p. 231), **activemq::wireformat::openwire::marshal::v2::ActiveMQMapMessageMarshaller** (p. 340), **activemq::wireformat::openwire::marshal::v2::ActiveMQMessageMarshaller** (p. 363), **activemq::wireformat::openwire::marshal::v2::ActiveMQObjectMessageMarshaller** (p. 404), **activemq::wireformat::openwire::marshal::v2::ActiveMQStreamMessageMarshaller** (p. 497), **activemq::wireformat::openwire::marshal::v2::ActiveMQTextMessageMarshaller** (p. 596), **activemq::wireformat::openwire::marshal::v2::BrokerInfoMarshaller** (p. 801), **activemq::wireformat::openwire::marshal::v2::ConnectionControlMarshaller** (p. 1158), **activemq::wireformat::openwire::marshal::v2::ConnectionErrorMarshaller** (p. 1182), **activemq::wireformat::openwire::marshal::v2::ConnectionInfoMarshaller** (p. 1235), **activemq::wireformat::openwire::marshal::v2::ConsumerControlMarshaller** (p. 1273), **activemq::wireformat::openwire::marshal::v2::ConsumerInfoMarshaller** (p. 1327), **activemq::wireformat::openwire::marshal::v2::ControlCommandMarshaller** (p. 1352), **activemq::wireformat::openwire::marshal::v2::DataArrayResponseMarshaller** (p. 1377),

 tivemq::wireformat::openwire::marshal::v2::BaseCommandMarshaller::tightUnmarshal
 (OpenWireFormat * *wireFormat*, commands::DataStructure
 * *dataStructure*, decaf::io::DataInputStream * *dataIn*,
 utils::BooleanStream * *bs*) throw (decaf::io::IOException) [virtual]

Un-marshal an object instance from the data input stream.

Parameters:

wireFormat - describes the wire format of the broker.
dataStructure - Object to be un-marshaled.
dataIn - BinaryReader that provides that data.
bs - BooleanStream stream used to unpack bits from the wire.

Exceptions:

IOException if an error occurs during the unmarshal.

Implements `activemq::wireformat::openwire::marshal::DataStreamMarshaller` (p. 1454).

Reimplemented in `activemq::wireformat::openwire::marshal::v2::ActiveMQBlobMessageMarshaller`
 (p. 196), `activemq::wireformat::openwire::marshal::v2::ActiveMQBytesMessageMarshaller`

Public Member Functions

- virtual `~BaseDataStreamMarshaller()`
- virtual `int tightMarshal(OpenWireFormat *format, AMQCPP_UNUSED, commands::DataStructure *command, AMQCPP_UNUSED, utils::BooleanStream *bs, AMQCPP_UNUSED) throw (decaf::io::IOException)`

Tight Marshal to the given stream.

- virtual void **tightMarshal2** (**OpenWireFormat** *format **AMQCPP_UNUSED**, **commands::DataStructure** *command **AMQCPP_UNUSED**, **decaf::io::DataOutputStream** *ds **AMQCPP_UNUSED**, **utils::BooleanStream** *bs **AMQCPP_UNUSED**) throw (**decaf::io::IOException**)

Tight Marshal to the given stream.

- virtual void **tightUnmarshal** (**OpenWireFormat** *format **AMQCPP_UNUSED**, **commands::DataStructure** *command **AMQCPP_UNUSED**, **decaf::io::DataInputStream** *dis **AMQCPP_UNUSED**, **utils::BooleanStream** *bs **AMQCPP_UNUSED**) throw (**decaf::io::IOException**)

Tight Un-Marshal to the given stream.

- virtual void **looseMarshal** (**OpenWireFormat** *format **AMQCPP_UNUSED**, **commands::DataStructure** *command **AMQCPP_UNUSED**, **decaf::io::DataOutputStream** *ds **AMQCPP_UNUSED**) throw (**decaf::io::IOException**)

Tight Marshal to the given stream.

- virtual void **looseUnmarshal** (**OpenWireFormat** *format **AMQCPP_UNUSED**, **commands::DataStructure** *command **AMQCPP_UNUSED**, **decaf::io::DataInputStream** *dis **AMQCPP_UNUSED**) throw (**decaf::io::IOException**)

Loose Un-Marshal to the given stream.

Static Public Member Functions

- static std::string **toString** (const **commands::MessageId** *id)
Converts the object to a String.
- static std::string **toString** (const **commands::ProducerId** *id)
Converts the object to a String.
- static std::string **toString** (const **commands::TransactionId** *txnId)
Converts the given transaction ID into a String.
- static std::string **toHexFromBytes** (const std::vector< unsigned char > &data)
given an array of bytes, convert that array to a Hexidecimal coded string that represents that data.

Protected Member Functions

- virtual **commands::DataStructure** * **tightUnmarshalCachedObject** (**OpenWireFormat** *wireFormat, **decaf::io::DataInputStream** *dataIn, **utils::BooleanStream** *bs) throw (**decaf::io::IOException**)

Tight Unmarshal the cached object.

- virtual int **tightMarshalCachedObject1** (OpenWireFormat *wireFormat, commands::DataStructure *data, utils::BooleanStream *bs) throw (decaf::io::IOException)
Tightly marshals the passed DataStructure based object to the passed BooleanStream returning the size of the data marshaled.
- virtual void **tightMarshalCachedObject2** (OpenWireFormat *wireFormat, commands::DataStructure *data, decaf::io::DataOutputStream *dataOut, utils::BooleanStream *bs) throw (decaf::io::IOException)
Tightly marshals the passed DataStructure based object to the passed streams returning nothing.
- virtual void **looseMarshalCachedObject** (OpenWireFormat *wireFormat, commands::DataStructure *data, decaf::io::DataOutputStream *dataOut) throw (decaf::io::IOException)
Loosely marshals the passed DataStructure based object to the passed stream returning nothing.
- virtual commands::DataStructure * **looseUnmarshalCachedObject** (OpenWireFormat *wireFormat, decaf::io::DataInputStream *dataIn) throw (decaf::io::IOException)
Loose Unmarshal the cached object.
- virtual int **tightMarshalNestedObject1** (OpenWireFormat *wireFormat, commands::DataStructure *object, utils::BooleanStream *bs) throw (decaf::io::IOException)
Tightly marshals the passed DataStructure based object to the passed BooleanStream returning the size of the data marshaled.
- virtual void **tightMarshalNestedObject2** (OpenWireFormat *wireFormat, commands::DataStructure *object, decaf::io::DataOutputStream *dataOut, utils::BooleanStream *bs) throw (decaf::io::IOException)
Tightly marshals the passed DataStructure based object to the passed streams returning nothing.
- virtual commands::DataStructure * **tightUnmarshalNestedObject** (OpenWireFormat *wireFormat, decaf::io::DataInputStream *dataIn, utils::BooleanStream *bs) throw (decaf::io::IOException)
Tight Unmarshal the nested object.
- virtual commands::DataStructure * **looseUnmarshalNestedObject** (OpenWireFormat *wireFormat, decaf::io::DataInputStream *dataIn) throw (decaf::io::IOException)
Loose Unmarshal the nested object.
- virtual void **looseMarshalNestedObject** (OpenWireFormat *wireFormat, commands::DataStructure *object, decaf::io::DataOutputStream *dataOut) throw (decaf::io::IOException)
Loose marshall the nested object.
- virtual std::string **tightUnmarshalString** (decaf::io::DataInputStream *dataIn, utils::BooleanStream *bs) throw (decaf::io::IOException)
Performs Tight Unmarshaling of String Objects.

- virtual int **tightMarshalString1** (const std::string &value, **utils::BooleanStream** *bs) throw (**decaf::io::IOException**)

Tight Marshals the String to a Booleans Stream Object, returns the marshaled size.

- virtual void **tightMarshalString2** (const std::string &value, **decaf::io::DataOutputStream** *dataOut, **utils::BooleanStream** *bs) throw (**decaf::io::IOException**)

Tight Marshals the passed string to the streams passed.

- virtual void **looseMarshalString** (const std::string value, **decaf::io::DataOutputStream** *dataOut) throw (**decaf::io::IOException**)

Loose Marshal the String to the DataOuputStream passed.

- virtual std::string **looseUnmarshalString** (**decaf::io::DataInputStream** *dataIn) throw (**decaf::io::IOException**)

Loose Un-Marshall the String to the DataOuputStream passed.

- virtual int **tightMarshalLong1** (**OpenWireFormat** *wireFormat, long long value, **utils::BooleanStream** *bs) throw (**decaf::io::IOException**)

Tightly marshal the long long to the BooleanStream passed.

- virtual void **tightMarshalLong2** (**OpenWireFormat** *wireFormat, long long value, **decaf::io::DataOutputStream** *dataOut, **utils::BooleanStream** *bs) throw (**decaf::io::IOException**)

Tightly marshal the long long to the Streams passed.

- virtual long long **tightUnmarshalLong** (**OpenWireFormat** *wireFormat, **decaf::io::DataInputStream** *dataIn, **utils::BooleanStream** *bs) throw (**decaf::io::IOException**)

Tight marshal the long long type.

- virtual void **looseMarshalLong** (**OpenWireFormat** *wireFormat, long long value, **decaf::io::DataOutputStream** *dataOut) throw (**decaf::io::IOException**)

Tightly marshal the long long to the BooleanStream passed.

- virtual long long **looseUnmarshalLong** (**OpenWireFormat** *wireFormat, **decaf::io::DataInputStream** *dataIn) throw (**decaf::io::IOException**)

Loose marshal the long long type.

- virtual std::vector< unsigned char > **tightUnmarshalByteArray** (**decaf::io::DataInputStream** *dataIn, **utils::BooleanStream** *bs) throw (**decaf::io::IOException**)

Tight Unmarshal an array of char.

- virtual std::vector< unsigned char > **looseUnmarshalByteArray** (**decaf::io::DataInputStream** *dataIn) throw (**decaf::io::IOException**)

Loose Unmarshal an array of char.

- virtual std::vector< unsigned char > **tightUnmarshalConstByteArray** (**decaf::io::DataInputStream** *dataIn, **utils::BooleanStream** *bs, int size) throw (**decaf::io::IOException**)

Tight Unmarshal a fixed size array from that data input stream and return an stl vector of char as the resultant.

- virtual `std::vector< unsigned char > looseUnmarshalConstByteArray (decaf::io::DataInputStream *dataIn, int size) throw (decaf::io::IOException)`

Tight Unmarshal a fixed size array from that data input stream and return an stl vector of char as the resultant.

- virtual `commands::DataStructure * tightUnmarshalBrokerError (OpenWireFormat *wireFormat, decaf::io::DataInputStream *dataIn, utils::BooleanStream *bs) throw (decaf::io::IOException)`

Tight Unmarshal the Error object.

- virtual `int tightMarshalBrokerError1 (OpenWireFormat *wireFormat, commands::DataStructure *data, utils::BooleanStream *bs) throw (decaf::io::IOException)`

Tight Marshal the Error object.

- virtual `void tightMarshalBrokerError2 (OpenWireFormat *wireFormat, commands::DataStructure *data, decaf::io::DataOutputStream *dataOut, utils::BooleanStream *bs) throw (decaf::io::IOException)`

Tight Marshal the Error object.

- virtual `commands::DataStructure * looseUnmarshalBrokerError (OpenWireFormat *wireFormat, decaf::io::DataInputStream *dataIn) throw (decaf::io::IOException)`

Loose Unmarshal the Error object.

- virtual `void looseMarshalBrokerError (OpenWireFormat *wireFormat, commands::DataStructure *data, decaf::io::DataOutputStream *dataOut) throw (decaf::io::IOException)`

Tight Marshal the Error object.

- `template<typename T > int tightMarshalObjectArray1 (OpenWireFormat *wireFormat, std::vector< T > objects, utils::BooleanStream *bs) throw (decaf::io::IOException)`

Tightly Marshal an array of DataStructure objects to the provided boolean stream, and return the size that the tight marshalling is going to take.

- `template<typename T > void tightMarshalObjectArray2 (OpenWireFormat *wireFormat, std::vector< T > objects, decaf::io::DataOutputStream *dataOut, utils::BooleanStream *bs) throw (decaf::io::IOException)`

Tightly Marshal an array of DataStructure objects to the provided boolean stream and data output stream.

- `template<typename T > void looseMarshalObjectArray (OpenWireFormat *wireFormat, std::vector< T > objects, decaf::io::DataOutputStream *dataOut) throw (decaf::io::IOException)`

Loosely Marshal an array of DataStructure objects to the provided boolean stream and data output stream.

- virtual std::string readAsciiString (decaf::io::DataInputStream *dataIn) throw (decaf::io::IOException)

Given an DataInputStream read a know ASCII formatted string from the input and return that string.

6.115.1 Detailed Description

Base class for all Marshallers that marshal DataStructures to and from the wire using the Open-Wire protocol.

Since:

2.0

6.115.2 Constructor & Destructor Documentation

- 6.115.2.1 virtual
activemq::wireformat::openwire::marshal::BaseDataStreamMarshaller::~BaseDataStreamMarshaller()
[inline, virtual]

6.115.3 Member Function Documentation

- 6.115.3.1 virtual void activemq::wireformat::openwire::marshal::BaseDataStreamMarshaller::looseMarshal (OpenWireFormat *format *AMQCPP_UNUSED*, commands::DataStructure *command *AMQCPP_UNUSED*, decaf::io::DataOutputStream *ds *AMQCPP_UNUSED*) throw (decaf::io::IOException) [inline, virtual]

Tight Marshal to the given stream.

Parameters:

format - The OpenwireFormat properties

command - the object to Marshal

ds - DataOutputStream to marshal to

Exceptions:

IOException if an error occurs.

- 6.115.3.2 virtual void activemq::wireformat::openwire::marshal::BaseDataStreamMarshaller::looseMarshalBrokerError (OpenWireFormat * *wireFormat*, commands::DataStructure * *data*, decaf::io::DataOutputStream * *dataOut*) throw (decaf::io::IOException) [protected, virtual]

Tight Marshal the Error object.

Parameters:

wireFormat - The OpenwireFormat properties

data - Error to Marshal

dataOut - stream to write marshalled data to

Exceptions:

IOException if an error occurs.

6.115.3.3 virtual void activemq::wireformat::openwire::marshal::BaseDataStreamMarshaller::looseMarshalCachedObject(OpenWireFormat * *wireFormat*, commands::DataStructure * *data*, decaf::io::DataOutputStream * *dataOut*) throw (decaf::io::IOException)
[protected, virtual]

Loosely marshals the passed DataStructure based object to the passed stream returning nothing.

Parameters:

wireFormat - The OpenWireFormat properties

data - DataStructure Object Pointer to marshal

dataOut - stream to write marshaled data to

Exceptions:

IOException if an error occurs.

6.115.3.4 virtual void activemq::wireformat::openwire::marshal::BaseDataStreamMarshaller::looseMarshalLong(OpenWireFormat * *wireFormat*, long long *value*, decaf::io::DataOutputStream * *dataOut*) throw (decaf::io::IOException)
[protected, virtual]

Tightly marshal the long long to the BooleanStream passed.

Parameters:

wireFormat - The OpenWireFormat properties

value - long long to marshal

dataOut - DataOutputStream to marshal to.

Exceptions:

IOException if an error occurs.

6.115.3.5 virtual void activemq::wireformat::openwire::marshal::BaseDataStreamMarshaller::looseMarshalNestedObject(OpenWireFormat * *wireFormat*, commands::DataStructure * *object*, decaf::io::DataOutputStream * *dataOut*) throw (decaf::io::IOException)
[protected, virtual]

Loose marshal the nested object.

Parameters:

wireFormat - The OpenwireFormat properties
object - DataStructure Object Pointer to marshal
dataOut - stream to write marshaled data to

Exceptions:

IOException if an error occurs.

6.115.3.6 `template<typename T > void activemq::wireformat::openwire::marshal::BaseDataStreamMarshaller::looseMarshalObjectA
 (OpenWireFormat * wireFormat, std::vector< T > objects,
 decaf::io::DataOutputStream * dataOut) throw (decaf::io::IOException)
 [inline, protected]`

Loosely Marshal an array of DataStructure objects to the provided boolean stream and data output stream.

Parameters:

wireFormat - The OpenwireFormat properties
objects - array of DataStructure object pointers.
dataOut - stream to write marshalled data to

Returns:

size of the marshalled data

Exceptions:

IOException if an error occurs.

References AMQ_CATCH_EXCEPTION_CONVERT, AMQ_CATCH_RETHROW, and AMQ_CATCHALL_THROW.

6.115.3.7 `virtual void activemq::wireformat::openwire::marshal::BaseDataStreamMarshaller::looseMarshalString
 (const std::string value, decaf::io::DataOutputStream * dataOut) throw (
 decaf::io::IOException) [protected, virtual]`

Loose Marshal the String to the DataOutputStream passed.

Parameters:

value - string to marshal
dataOut - stream to write marshaled form to

Exceptions:

IOException if an error occurs.

6.115.3.8 virtual void activemq::wireformat::openwire::marshal::BaseDataStreamMarshaller::looseUnmarshal (OpenWireFormat *format *AMQCPP_UNUSED*, commands::DataStructure *command *AMQCPP_UNUSED*, decaf::io::DataInputStream *dis *AMQCPP_UNUSED*) throw (decaf::io::IOException) [inline, virtual]

Loose Un-Marshal to the given stream.

Parameters:

format - The OpenwireFormat properties
command - the object to Un-Marshal
dis - the DataInputStream to Un-Marshal from

Exceptions:

IOException if an error occurs.

6.115.3.9 virtual commands::DataStructure* activemq::wireformat::openwire::marshal::BaseDataStreamMarshaller::looseUnmarshalBroken (OpenWireFormat * *wireFormat*, decaf::io::DataInputStream * *dataIn*) throw (decaf::io::IOException) [protected, virtual]

Loose Unmarshal the Error object.

Parameters:

wireFormat - The OpenwireFormat properties
dataIn - stream to read marshalled form from

Returns:

pointer to a new DataStructure Object

Exceptions:

IOException if an error occurs.

6.115.3.10 virtual std::vector<unsigned char> activemq::wireformat::openwire::marshal::BaseDataStreamMarshaller::looseUnmarshalBytes (decaf::io::DataInputStream * *dataIn*) throw (decaf::io::IOException) [protected, virtual]

Loose Unmarshal an array of char.

Parameters:

dataIn - the DataInputStream to Un-Marshal from

Returns:

the unmarshalled vector of chars.

Exceptions:

IOException if an error occurs.

6.115.3.11 `virtual commands::DataStructure* activemq::wireformat::openwire::marshal::BaseDataStreamMarshaller::looseUnmarshalCached(OpenWireFormat * wireFormat, decaf::io::DataInputStream * dataIn) throw (decaf::io::IOException)` [protected, virtual]

Loose Unmarshal the cached object.

Parameters:

wireFormat - The OpenWireFormat properties

dataIn - stream to read marshaled form from

Returns:

pointer to a new DataStructure Object

Exceptions:

IOException if an error occurs.

6.115.3.12 `virtual std::vector<unsigned char> activemq::wireformat::openwire::marshal::BaseDataStreamMarshaller::looseUnmarshalConstrained(decaf::io::DataInputStream * dataIn, int size) throw (decaf::io::IOException)` [protected, virtual]

Tight Unmarshal a fixed size array from that data input stream and return an stl vector of char as the resultant.

Parameters:

dataIn - the DataInputStream to Un-Marshall from

size - size of the const array to unmarshal

Returns:

the unmarshaled vector of chars.

Exceptions:

IOException if an error occurs.

6.115.3.13 `virtual long long activemq::wireformat::openwire::marshal::BaseDataStreamMarshaller::looseUnmarshalLong(OpenWireFormat * wireFormat, decaf::io::DataInputStream * dataIn) throw (decaf::io::IOException)` [protected, virtual]

Loose marshal the long long type.

Parameters:

wireFormat - The OpenWireFormat properties

dataIn - stream to read marshaled form from

Returns:

the unmarshaled long long

Exceptions:

IOException if an error occurs.

6.115.3.14 virtual commands::DataStructure* activemq::wireformat::openwire::marshal::BaseDataStreamMarshaller::looseUnmarshalNested(OpenWireFormat * *wireFormat*, decaf::io::DataInputStream * *dataIn*) throw (decaf::io::IOException) [protected, virtual]

Loose Unmarshal the nested object.

Parameters:

wireFormat - The OpenWireFormat properties

dataIn - stream to read marshaled form from

Returns:

pointer to a new DataStructure Object

Exceptions:

IOException if an error occurs.

6.115.3.15 virtual std::string activemq::wireformat::openwire::marshal::BaseDataStreamMarshaller::looseUnmarshalString(decaf::io::DataInputStream * *dataIn*) throw (decaf::io::IOException) [protected, virtual]

Loose Un-Marshal the String to the DataOutputStream passed.

Parameters:

dataIn - stream to read marshaled form from

Returns:

the unmarshaled string

Exceptions:

IOException if an error occurs.

6.115.3.16 virtual std::string activemq::wireformat::openwire::marshal::BaseDataStreamMarshaller::readAsciiString(decaf::io::DataInputStream * *dataIn*) throw (decaf::io::IOException) [protected, virtual]

Given an DataInputStream read a know ASCII formatted string from the input and return that string.

Parameters:

dataIn - DataInputStream to read from

Returns:

string value read from stream

6.115.3.17 virtual int activemq::wireformat::openwire::marshal::BaseDataStreamMarshaller::tightMarshal1 (OpenWireFormat *format *AMQCPP_UNUSED*, commands::DataStructure *command *AMQCPP_UNUSED*, utils::BooleanStream *bs *AMQCPP_UNUSED*) throw (decaf::io::IOException) [inline, virtual]

Tight Marshal to the given stream.

Parameters:

format - The OpenWireFormat properties

command - the object to Marshal

bs - boolean stream to marshal to.

Exceptions:

IOException if an error occurs.

6.115.3.18 virtual void activemq::wireformat::openwire::marshal::BaseDataStreamMarshaller::tightMarshal2 (OpenWireFormat *format *AMQCPP_UNUSED*, commands::DataStructure *command *AMQCPP_UNUSED*, decaf::io::DataOutputStream *ds *AMQCPP_UNUSED*, utils::BooleanStream *bs *AMQCPP_UNUSED*) throw (decaf::io::IOException) [inline, virtual]

Tight Marshal to the given stream.

Parameters:

format - The OpenWireFormat properties

command - the object to Marshal

ds - the DataOutputStream to Marshal to

bs - boolean stream to marshal to.

Exceptions:

IOException if an error occurs.

6.115.3.19 `virtual int activemq::wireformat::openwire::marshal::BaseDataStreamMarshaller::tightMarshalBroker(OpenWireFormat * wireFormat, commands::DataStructure * data, utils::BooleanStream * bs) throw (decaf::io::IOException)` [protected, virtual]

Tight Marshal the Error object.

Parameters:

wireFormat - The OpenwireFormat properties

data - Error to Marshal

bs - boolean stream to marshal to.

Returns:

size of the marshalled data

Exceptions:

IOException if an error occurs.

6.115.3.20 `virtual void activemq::wireformat::openwire::marshal::BaseDataStreamMarshaller::tightMarshalBroker(OpenWireFormat * wireFormat, commands::DataStructure * data, decaf::io::DataOutputStream * dataOut, utils::BooleanStream * bs) throw (decaf::io::IOException)` [protected, virtual]

Tight Marshal the Error object.

Parameters:

wireFormat - The OpenwireFormat properties

data - Error to Marshal

dataOut - stream to write marshalled data to

bs - boolean stream to marshal to.

Exceptions:

IOException if an error occurs.

6.115.3.21 `virtual int activemq::wireformat::openwire::marshal::BaseDataStreamMarshaller::tightMarshalCached(OpenWireFormat * wireFormat, commands::DataStructure * data, utils::BooleanStream * bs) throw (decaf::io::IOException)` [protected, virtual]

Tightly marshals the passed DataStructure based object to the passed BooleanStream returning the size of the data marshaled.

Parameters:

wireFormat - The OpenwireFormat properties

data - DataStructure Object Pointer to marshal

bs - boolean stream to marshal to.

Returns:

size of data written.

Exceptions:

IOException if an error occurs.

6.115.3.22 virtual void activemq::wireformat::openwire::marshal::BaseDataStreamMarshaller::tightMarshalCached
(OpenWireFormat * *wireFormat*, commands::DataStructure * *data*,
decaf::io::DataOutputStream * *dataOut*, utils::BooleanStream * *bs*)
throw (decaf::io::IOException) [protected, virtual]

Tightly marshals the passed DataStructure based object to the passed streams returning nothing.

Parameters:

wireFormat - The OpenWireFormat properties

data - DataStructure Object Pointer to marshal

bs - boolean stream to marshal to.

dataOut - stream to write marshaled data to

Exceptions:

IOException if an error occurs.

6.115.3.23 virtual int activemq::wireformat::openwire::marshal::BaseDataStreamMarshaller::tightMarshalLong1
(OpenWireFormat * *wireFormat*, long long *value*, utils::BooleanStream
* *bs*) throw (decaf::io::IOException) [protected, virtual]

Tightly marshal the long long to the BooleanStream passed.

Parameters:

wireFormat - The OpenWireFormat properties

value - long long to marshal

bs - boolean stream to marshal to.

Returns:

size of data written.

Exceptions:

IOException if an error occurs.

6.115.3.24 virtual void activemq::wireformat::openwire::marshal::BaseDataStreamMarshaller::tightMarshalLong2 (OpenWireFormat * *wireFormat*, long long *value*, decaf::io::DataOutputStream * *dataOut*, utils::BooleanStream * *bs*) throw (decaf::io::IOException) [protected, virtual]

Tightly marshal the long long to the Streams passed.

Parameters:

wireFormat - The OpenWireFormat properties

value - long long to marshal

dataOut - stream to write marshaled form to

bs - boolean stream to marshal to.

Exceptions:

IOException if an error occurs.

6.115.3.25 virtual int activemq::wireformat::openwire::marshal::BaseDataStreamMarshaller::tightMarshalNested (OpenWireFormat * *wireFormat*, commands::DataStructure * *object*, utils::BooleanStream * *bs*) throw (decaf::io::IOException) [protected, virtual]

Tightly marshals the passed DataStructure based object to the passed BooleanStream returning the size of the data marshaled.

Parameters:

wireFormat - The OpenWireFormat properties

object - DataStructure Object Pointer to marshal

bs - boolean stream to marshal to.

Returns:

size of data written.

Exceptions:

IOException if an error occurs.

6.115.3.26 virtual void activemq::wireformat::openwire::marshal::BaseDataStreamMarshaller::tightMarshalNested (OpenWireFormat * *wireFormat*, commands::DataStructure * *object*, decaf::io::DataOutputStream * *dataOut*, utils::BooleanStream * *bs*) throw (decaf::io::IOException) [protected, virtual]

Tightly marshals the passed DataStructure based object to the passed streams returning nothing.

Parameters:

wireFormat - The OpenWireFormat properties

object - DataStructure Object Pointer to marshal

bs - boolean stream to marshal to.

dataOut - stream to write marshaled data to

Exceptions:

IOException if an error occurs.

```
6.115.3.27  template<typename T > int ac-
             tivemq::wireformat::openwire::marshal::BaseDataStreamMarshaller::tightMarshalObject
             (OpenWireFormat * wireFormat, std::vector< T > objects,
             utils::BooleanStream * bs) throw ( decaf::io::IOException ) [inline,
             protected]
```

Tightly Marshal an array of DataStructure objects to the provided boolean stream, and return the size that the tight marshalling is going to take.

Parameters:

wireFormat - The OpenwireFormat properties

objects - array of DataStructure object pointers.

bs - boolean stream to marshal to.

Returns:

size of the marshalled data

Exceptions:

IOException if an error occurs.

References AMQ_CATCH_EXCEPTION_CONVERT, AMQ_CATCH_RETHROW, and AMQ_CATCHALL_THROW.

```
6.115.3.28  template<typename T > void ac-
             tivemq::wireformat::openwire::marshal::BaseDataStreamMarshaller::tightMarshalObject
             (OpenWireFormat * wireFormat, std::vector< T > objects,
             decaf::io::DataOutputStream * dataOut, utils::BooleanStream * bs)
             throw ( decaf::io::IOException ) [inline, protected]
```

Tightly Marshal an array of DataStructure objects to the provided boolean stream and data output stream.

Parameters:

wireFormat - The OpenwireFormat properties

objects - array of DataStructure object pointers.

dataOut - stream to write marshalled data to

bs - boolean stream to marshal to.

Returns:

size of the marshalled data

Exceptions:

IOException if an error occurs.

References AMQ_CATCH_EXCEPTION_CONVERT, AMQ_CATCH_RETHROW, and AMQ_CATCHALL_THROW.

6.115.3.29 virtual int activemq::wireformat::openwire::marshal::BaseDataStreamMarshaller::tightMarshalString1 (const std::string & *value*, utils::BooleanStream * *bs*) throw (decaf::io::IOException) [protected, virtual]

Tight Marshals the String to a Booleans Stream Object, returns the marshaled size.

Parameters:

value - string to marshal
bs - BooleanStream to use.

Returns:

size of marshaled string.

Exceptions:

IOException if an error occurs.

6.115.3.30 virtual void activemq::wireformat::openwire::marshal::BaseDataStreamMarshaller::tightMarshalString2 (const std::string & *value*, decaf::io::DataOutputStream * *dataOut*, utils::BooleanStream * *bs*) throw (decaf::io::IOException) [protected, virtual]

Tight Marshals the passed string to the streams passed.

Parameters:

value - string to marshal
dataOut - the DataOutputStream to Marshal to
bs - boolean stream to marshal to.

Exceptions:

IOException if an error occurs.

6.115.3.31 virtual void activemq::wireformat::openwire::marshal::BaseDataStreamMarshaller::tightUnmarshal (OpenWireFormat **format* AMQCPP_UNUSED, commands::DataStructure **command* AMQCPP_UNUSED, decaf::io::DataInputStream **dis* AMQCPP_UNUSED, utils::BooleanStream **bs* AMQCPP_UNUSED) throw (decaf::io::IOException) [inline, virtual]

Tight Un-Marshal to the given stream.

Parameters:

format - The OpenwireFormat properties
command - the object to Un-Marshall
dis - the DataInputStream to Un-Marshall from
bs - boolean stream to Un-Marshall from.

Exceptions:

IOException if an error occurs.

6.115.3.32 `virtual commands::DataStructure* activemq::wireformat::openwire::marshal::BaseDataStreamMarshaller::tightUnmarshalBroken(OpenWireFormat * wireFormat, decaf::io::DataInputStream * dataIn, utils::BooleanStream * bs) throw (decaf::io::IOException)` [protected, virtual]

Tight Unmarshall the Error object.

Parameters:

wireFormat - The OpenwireFormat properties
dataIn - stream to read marshalled form from
bs - boolean stream to marshal to.

Returns:

pointer to a new DataStructure Object

Exceptions:

IOException if an error occurs.

6.115.3.33 `virtual std::vector<unsigned char> activemq::wireformat::openwire::marshal::BaseDataStreamMarshaller::tightUnmarshalByteArray(decaf::io::DataInputStream * dataIn, utils::BooleanStream * bs) throw (decaf::io::IOException)` [protected, virtual]

Tight Unmarshal an array of char.

Parameters:

dataIn - the DataInputStream to Un-Marshall from
bs - boolean stream to unmarshal from.

Returns:

the unmarshaled vector of chars.

Exceptions:

IOException if an error occurs.

6.115.3.34 `virtual commands::DataStructure* activemq::wireformat::openwire::marshal::BaseDataStreamMarshaller::tightUnmarshalCached(OpenWireFormat * wireFormat, decaf::io::DataInputStream * dataIn, utils::BooleanStream * bs) throw (decaf::io::IOException)` [protected, virtual]

Tight Unmarshal the cached object.

Parameters:

wireFormat - The OpenWireFormat properties
dataIn - stream to read marshaled form from
bs - boolean stream to marshal to.

Returns:

pointer to a new DataStructure Object

Exceptions:

IOException if an error occurs.

6.115.3.35 `virtual std::vector<unsigned char> activemq::wireformat::openwire::marshal::BaseDataStreamMarshaller::tightUnmarshalConsistent(decaf::io::DataInputStream * dataIn, utils::BooleanStream * bs, int size) throw (decaf::io::IOException)` [protected, virtual]

Tight Unmarshal a fixed size array from that data input stream and return an stl vector of char as the resultant.

Parameters:

dataIn - the DataInputStream to Un-Marshall from
bs - boolean stream to unmarshal from.
size - size of the const array to unmarshal

Returns:

the unmarshaled vector of chars.

Exceptions:

IOException if an error occurs.

6.115.3.36 `virtual long long activemq::wireformat::openwire::marshal::BaseDataStreamMarshaller::tightUnmarshalLong(OpenWireFormat * wireFormat, decaf::io::DataInputStream * dataIn, utils::BooleanStream * bs) throw (decaf::io::IOException)` [protected, virtual]

Tight marshal the long long type.

Parameters:

wireFormat - The OpenwireFormat properties
dataIn - stream to read marshaled form from
bs - boolean stream to marshal to.

Returns:

the unmarshaled long long

Exceptions:

IOException if an error occurs.

6.115.3.37 `virtual commands::DataStructure* activemq::wireformat::openwire::marshal::BaseDataStreamMarshaller::tightUnmarshalNested(OpenWireFormat * wireFormat, decaf::io::DataInputStream * dataIn, utils::BooleanStream * bs) throw (decaf::io::IOException) [protected, virtual]`

Tight Unmarshal the nested object.

Parameters:

wireFormat - The OpenwireFormat properties
dataIn - stream to read marshaled form from
bs - boolean stream to marshal to.

Returns:

pointer to a new DataStructure Object

Exceptions:

IOException if an error occurs.

6.115.3.38 `virtual std::string activemq::wireformat::openwire::marshal::BaseDataStreamMarshaller::tightUnmarshalString(decaf::io::DataInputStream * dataIn, utils::BooleanStream * bs) throw (decaf::io::IOException) [protected, virtual]`

Performs Tight Unmarshaling of String Objects.

Parameters:

dataIn - the DataInputStream to Un-Marshal from
bs - boolean stream to unmarshal from.

Returns:

the unmarshaled string.

Exceptions:

IOException if an error occurs.

6.115.3.39 static std::string activemq::wireformat::openwire::marshal::BaseDataStreamMarshaller::toHexFromBytes (const std::vector< unsigned char > & *data*) [static]

given an array of bytes, convert that array to a Hexidecimal coded string that represents that data.

Parameters:

data - unsigned char data array pointer

Returns:

a string coded in hex that represents the data

6.115.3.40 static std::string activemq::wireformat::openwire::marshal::BaseDataStreamMarshaller::toString (const commands::TransactionId * *txnId*) [static]

Converts the given transaction ID into a String.

Parameters:

txnId - TransactionId poitner

Returns:

string representation of the id

6.115.3.41 static std::string activemq::wireformat::openwire::marshal::BaseDataStreamMarshaller::toString (const commands::ProducerId * *id*) [static]

Converts the object to a String.

Parameters:

id - ProducerId pointer

Returns:

string representing the id

6.115.3.42 static std::string activemq::wireformat::openwire::marshal::BaseDataStreamMarshaller::toString (const commands::MessageId * *id*) [static]

Converts the object to a String.

Parameters:

id - MessageId pointer

Returns:

string representing the id

Referenced by `activemq::commands::ActiveMQMessageTemplate< cms::ObjectMessage >::getCMSMessageID()`.

The documentation for this class was generated from the following file:

- `src/main/activemq/wireformat/openwire/marshal/BaseDataStreamMarshaller.h`

6.116 activemq::commands::BaseDataStructure Class Reference

#include <src/main/activemq/commands/BaseDataStructure.h> Inheritance diagram for activemq::commands::BaseDataStructure:

Public Member Functions

- virtual `~BaseDataStructure ()`
- virtual bool `isMarshalAware ()` const
Determine if this object is aware of marshaling and should have its before and after marshaling methods called.
- virtual void `beforeMarshal (wireformat::WireFormat *wireFormat AMQCPP_UNUSED) throw (decaf::io::IOException)`
Perform any processing needed before an marshal.
- virtual void `afterMarshal (wireformat::WireFormat *wireFormat AMQCPP_UNUSED) throw (decaf::io::IOException)`
Perform any processing needed after an unmarshal.
- virtual void `beforeUnmarshal (wireformat::WireFormat *wireFormat AMQCPP_UNUSED) throw (decaf::io::IOException)`
Perform any processing needed before an unmarshal.
- virtual void `afterUnmarshal (wireformat::WireFormat *wireFormat AMQCPP_UNUSED) throw (decaf::io::IOException)`
Perform any processing needed after an unmarshal.
- virtual void `setMarshaledForm (wireformat::WireFormat *wireFormat AMQCPP_UNUSED, const std::vector< char > &data AMQCPP_UNUSED)`
Called to set the data to this object that will contain the objects marshaled form.
- virtual std::vector< unsigned char > `getMarshaledForm (wireformat::WireFormat *wireFormat AMQCPP_UNUSED)`
Called to get the data to this object that will contain the objects marshaled form.
- virtual void `copyDataStructure (const DataStructure *src AMQCPP_UNUSED)`
Copy the contents of the passed object into this objects members, overwriting any existing data.
- virtual std::string `toString ()` const
*Returns a string containing the information for this **DataStructure** (p. 1461) such as its type and value of its elements.*
- virtual bool `equals (const DataStructure *value AMQCPP_UNUSED)` const
*Compares the **DataStructure** (p. 1461) passed in to this one, and returns if they are equivalent.*

6.116.1 Constructor & Destructor Documentation

6.116.1.1 `virtual activemq::commands::BaseDataStructure::~~BaseDataStructure ()`
[inline, virtual]

6.116.2 Member Function Documentation

6.116.2.1 `virtual void activemq::commands::BaseDataStructure::afterMarshal`
(`wireformat::WireFormat *wireFormat AMQCPP_UNUSED`) throw (`decaf::io::IOException`) [inline, virtual]

Perform any processing needed after an unmarshal.

Parameters:

wireformat - the OpenWireFormat object in use.

6.116.2.2 `virtual void activemq::commands::BaseDataStructure::afterUnmarshal`
(`wireformat::WireFormat *wireFormat AMQCPP_UNUSED`) throw (`decaf::io::IOException`) [inline, virtual]

Perform any processing needed after an unmarshal.

Parameters:

wireformat - the OpenWireFormat object in use.

Reimplemented in `activemq::commands::Message` (p. 2149), and `activemq::commands::WireFormatInfo` (p. 3371).

6.116.2.3 `virtual void activemq::commands::BaseDataStructure::beforeMarshal`
(`wireformat::WireFormat *wireFormat AMQCPP_UNUSED`) throw (`decaf::io::IOException`) [inline, virtual]

Perform any processing needed before an marshal.

Parameters:

wireformat - the OpenWireFormat object in use.

Reimplemented in `activemq::commands::Message` (p. 2149), and `activemq::commands::WireFormatInfo` (p. 3372).

6.116.2.4 `virtual void activemq::commands::BaseDataStructure::beforeUnmarshal`
(`wireformat::WireFormat *wireFormat AMQCPP_UNUSED`) throw (`decaf::io::IOException`) [inline, virtual]

Perform any processing needed before an unmarshal.

Parameters:

wireformat - the OpenWireFormat object in use.

6.116.2.5 virtual void activemq::commands::BaseDataStructure::copyDataStructure (const DataStructure *src *AMQCPP_UNUSED*) [inline, virtual]

Copy the contents of the passed object into this objects members, overwriting any existing data.

Returns:

src - Source Object

Reimplemented in `activemq::commands::BooleanExpression` (p. 738).

6.116.2.6 virtual bool activemq::commands::BaseDataStructure::equals (const DataStructure *value *AMQCPP_UNUSED*) const [inline, virtual]

Compares the `DataStructure` (p. 1461) passed in to this one, and returns if they are equivalent. Equivalent here means that they are of the same type, and that each element of the objects are the same.

Returns:

true if DataStructure's are Equal.

Referenced by `activemq::commands::BooleanExpression::equals()`, and `activemq::commands::BaseCommand::equals()`.

6.116.2.7 virtual std::vector<unsigned char> activemq::commands::BaseDataStructure::getMarshaledForm (wireformat::WireFormat *wireFormat *AMQCPP_UNUSED*) [inline, virtual]

Called to get the data to this object that will contain the objects marshaled form.

Parameters:

wireFormat - the wireformat object to control unmarshaling

Returns:

buffer that holds the objects data.

6.116.2.8 virtual bool activemq::commands::BaseDataStructure::isMarshalAware () const [inline, virtual]

Determine if this object is aware of marshaling and should have its before and after marshaling methods called. Defaults to false.

Returns:

true if aware of marshaling

Implements `activemq::wireformat::MarshalAware` (p. 2120).

Reimplemented in `activemq::commands::ActiveMQMapMessage` (p. 316), `activemq::commands::Message` (p. 2155), and `activemq::commands::WireFormatInfo` (p. 3374).

6.116.2.9 `virtual void activemq::commands::BaseDataStructure::setMarshaledForm (wireformat::WireFormat *wireFormat AMQCPP_UNUSED, const std::vector< char > &data AMQCPP_UNUSED)` [inline, virtual]

Called to set the data to this object that will contain the objects marshaled form.

Parameters:

wireFormat - the wireformat object to control unmarshaling

data - vector of object binary data

6.116.2.10 `virtual std::string activemq::commands::BaseDataStructure::toString () const` [inline, virtual]

Returns a string containing the information for this **DataStructure** (p.1461) such as its type and value of its elements.

Returns:

formatted string useful for debugging.

Implements **activemq::commands::DataStructure** (p.1465).

Reimplemented in **activemq::commands::ActiveMQBlobMessage** (p.176), **activemq::commands::ActiveMQBytesMessage** (p.208), **activemq::commands::ActiveMQDestination** (p.282), **activemq::commands::ActiveMQMapMessage** (p.320), **activemq::commands::ActiveMQMessage** (p.344), **activemq::commands::ActiveMQObjectMessage** (p.385), **activemq::commands::ActiveMQQueue** (p.422), **activemq::commands::ActiveMQStreamMessage** (p.474), **activemq::commands::ActiveMQTempDestination** (p.501), **activemq::commands::ActiveMQTempQueue** (p.526), **activemq::commands::ActiveMQTempTopic** (p.551), **activemq::commands::ActiveMQTextMessage** (p.577), **activemq::commands::ActiveMQTopic** (p.601), **activemq::commands::BaseCommand** (p.655), **activemq::commands::BooleanExpression** (p.738), **activemq::commands::BrokerId** (p.753), **activemq::commands::BrokerInfo** (p.780), **activemq::commands::Command** (p.1067), **activemq::commands::ConnectionControl** (p.1138), **activemq::commands::ConnectionError** (p.1162), **activemq::commands::ConnectionId** (p.1189), **activemq::commands::ConnectionInfo** (p.1215), **activemq::commands::ConsumerControl** (p.1253), **activemq::commands::ConsumerId** (p.1278), **activemq::commands::ConsumerInfo** (p.1305), **activemq::commands::ControlCommand** (p.1332), **activemq::commands::DataArrayResponse** (p.1358), **activemq::commands::DataResponse** (p.1397), **activemq::commands::DestinationInfo** (p.1487), **activemq::commands::DiscoveryEvent** (p.1513), **activemq::commands::ExceptionResponse** (p.1584), **activemq::commands::FlushCommand** (p.1678), **activemq::commands::IntegerResponse** (p.1779), **activemq::commands::JournalQueueAck** (p.1836), **activemq::commands::JournalTopicAck** (p.1861), **activemq::commands::JournalTrace** (p.1885), **activemq::commands::JournalTransaction** (p.1908), **activemq::commands::KeepAliveInfo** (p.1932), **activemq::commands::LastPartialCommand** (p.1960), **activemq::commands::LocalTransactionId** (p.1996), **activemq::commands::Message** (p.2159), **activemq::commands::MessageAck**

(p. 2192), [activemq::commands::MessageDispatch](#) (p. 2222), [activemq::commands::MessageDispatchNotification](#) (p. 2255), [activemq::commands::MessageId](#) (p. 2282), [activemq::commands::MessagePull](#) (p. 2349), [activemq::commands::NetworkBridgeFilter](#) (p. 2395), [activemq::commands::PartialCommand](#) (p. 2475), [activemq::commands::ProducerAck](#) (p. 2581), [activemq::commands::ProducerId](#) (p. 2609), [activemq::commands::ProducerInfo](#) (p. 2634), [activemq::commands::RemoveInfo](#) (p. 2705), [activemq::commands::RemoveSubscriptionInfo](#) (p. 2730), [activemq::commands::ReplayCommand](#) (p. 2754), [activemq::commands::Response](#) (p. 2783), [activemq::commands::SessionId](#) (p. 2856), [activemq::commands::SessionInfo](#) (p. 2879), [activemq::commands::ShutdownInfo](#) (p. 2936), [activemq::commands::SubscriptionInfo](#) (p. 3100), [activemq::commands::TransactionId](#) (p. 3219), [activemq::commands::TransactionInfo](#) (p. 3243), [activemq::commands::WireFormatInfo](#) (p. 3378), and [activemq::commands::XATransactionId](#) (p. 3413).

Referenced by [activemq::commands::BooleanExpression::toString\(\)](#), and [activemq::commands::BaseCommand::toString\(\)](#).

6.118 decaf::net::BindException Class Reference

#include <src/main/decaf/net/BindException.h> Inheritance diagram for decaf::net::BindException:

Public Member Functions

- **BindException** () throw ()
Default Constructor.
- **BindException** (const Exception &ex) throw ()
Conversion Constructor from some other Exception.
- **BindException** (const **BindException** &ex) throw ()
Copy Constructor.
- **BindException** (const char *file, const int lineNumber, const std::exception *cause, const char *msg,...) throw ()
Constructor - Initializes the file name and line number where this message occurred.
- **BindException** (const std::exception *cause) throw ()
Constructor.
- **BindException** (const char *file, const int lineNumber, const char *msg,...) throw ()
Constructor - Initializes the file name and line number where this message occurred.
- virtual **BindException** * clone () const
Clones this exception.
- virtual ~**BindException** () throw ()

6.118.1 Constructor & Destructor Documentation

6.118.1.1 decaf::net::BindException::BindException () throw () [inline]

Default Constructor.

6.118.1.2 decaf::net::BindException::BindException (const Exception & ex) throw () [inline]

Conversion Constructor from some other Exception.

Parameters:

ex An exception that should become this type of Exception

6.118.1.3 `decaf::net::BindException::BindException (const BindException & ex)
throw () [inline]`

Copy Constructor.

Parameters:

ex An exception that should become this type of Exception

6.118.1.4 `decaf::net::BindException::BindException (const char * file, const int
lineNumber, const std::exception * cause, const char * msg, ...) throw
() [inline]`

Constructor - Initializes the file name and line number where this message occurred. Sets the message to report, using an optional list of arguments to parse into the message

Parameters:

file The file name where exception occurs

lineNumber The line number where the exception occurred.

cause The exception that was the cause for this one to be thrown.

msg The message to report

... list of primitives that are formatted into the message

6.118.1.5 `decaf::net::BindException::BindException (const std::exception * cause)
throw () [inline]`

Constructor.

Parameters:

cause Pointer to the exception that caused this one to be thrown, the object is cloned caller retains ownership.

6.118.1.6 `decaf::net::BindException::BindException (const char * file, const int
lineNumber, const char * msg, ...) throw () [inline]`

Constructor - Initializes the file name and line number where this message occurred. Sets the message to report, using an optional list of arguments to parse into the message

Parameters:

file The file name where exception occurs

lineNumber The line number where the exception occurred.

msg The message to report

... list of primitives that are formatted into the message

6.118.1.7 `virtual decaf::net::BindException::~~BindException () throw ()` [inline, virtual]

6.118.2 Member Function Documentation

6.118.2.1 `virtual BindException* decaf::net::BindException::clone () const`
[inline, virtual]

Clones this exception. This is useful for cases where you need to preserve the type of the original exception as well as the message. All subclasses should override.

Returns:

a new Exception instance that is a copy of this Exception object.

Reimplemented from **decaf::net::SocketException** (p. 2973).

The documentation for this class was generated from the following file:

- `src/main/decaf/net/BindException.h`

6.119 decaf::io::BlockingByteArrayInputStream Class Reference

This is a blocking version of a byte buffer stream.

#include <src/main/decaf/io/BlockingByteArrayInputStream.h> Inheritance diagram for decaf::io::BlockingByteArrayInputStream:

Public Member Functions

- **BlockingByteArrayInputStream** ()
Default Constructor - uses a default internal buffer.
- **BlockingByteArrayInputStream** (const unsigned char *buffer, std::size_t bufferSize)
Constructor that initializes the internal buffer.
- virtual ~**BlockingByteArrayInputStream** ()
Destructor.
- virtual void **setByteArray** (const unsigned char *buffer, std::size_t bufferSize)
Sets the data that this reader uses.
- virtual std::size_t **available** () const throw (IOException)
Indicates the number of bytes available to be read without blocking.
- virtual int **read** () throw (IOException)
Reads a single byte from the buffer.
- virtual int **read** (unsigned char *buffer, std::size_t offset, std::size_t bufferSize) throw (IOException, lang::exceptions::NullPointerException)
Reads an array of bytes from the buffer.
- virtual void **close** () throw (io::IOException)
Closes the target input stream.
- virtual std::size_t **skip** (std::size_t num) throw (io::IOException, lang::exceptions::UnsupportedOperationException)
Skips over and discards n bytes of data from this input stream.
- virtual void **mark** (int readLimit DECAF_UNUSED)
Marks the current position in the stream A subsequent call to the reset method repositions this stream at the last marked position so that subsequent reads re-read the same bytes.
- virtual void **reset** () throw (IOException)
Repositions this stream to the position at the time the mark method was last called on this input stream.
- virtual bool **markSupported** () const

Determines if this input stream supports the mark and reset methods.

- virtual void **lock** () throw (decaf::lang::exceptions::RuntimeException)
Locks the object.
- virtual bool **tryLock** () throw (decaf::lang::exceptions::RuntimeException)
Attempts to Lock the object, if the lock is already held by another thread than this method returns false.
- virtual void **unlock** () throw (decaf::lang::exceptions::RuntimeException)
Unlocks the object.
- virtual void **wait** () throw (decaf::lang::exceptions::RuntimeException, decaf::lang::exceptions::IllegalMonitorStateException, decaf::lang::exceptions::InterruptedException)
Waits on a signal from this object, which is generated by a call to Notify.
- virtual void **wait** (long long millisecs) throw (decaf::lang::exceptions::RuntimeException, decaf::lang::exceptions::IllegalMonitorStateException, decaf::lang::exceptions::InterruptedException)
Waits on a signal from this object, which is generated by a call to Notify.
- virtual void **wait** (long long millisecs, int nanos) throw (decaf::lang::exceptions::RuntimeException, decaf::lang::exceptions::IllegalArgumentException, decaf::lang::exceptions::IllegalMonitorStateException, decaf::lang::exceptions::InterruptedException)
Waits on a signal from this object, which is generated by a call to Notify.
- virtual void **notify** () throw (decaf::lang::exceptions::RuntimeException, decaf::lang::exceptions::IllegalMonitorStateException)
Signals a waiter on this object that it can now wake up and continue.
- virtual void **notifyAll** () throw (decaf::lang::exceptions::RuntimeException, decaf::lang::exceptions::IllegalMonitorStateException)
Signals the waiters on this object that it can now wake up and continue.

6.119.1 Detailed Description

This is a blocking version of a byte buffer stream. Read operations block until the requested data becomes available in the internal buffer via a call to setByteArray.

6.119.2 Constructor & Destructor Documentation

6.119.2.1 decaf::io::BlockingByteArrayInputStream::BlockingByteArrayInputStream ()

Default Constructor - uses a default internal buffer.

6.119.2.2 `decaf::io::BlockingByteArrayInputStream::BlockingByteArrayInputStream (const unsigned char * buffer, std::size_t bufferSize)`

Constructor that initializes the internal buffer.

See also:

`setByteArray` (p. 729).

6.119.2.3 `virtual decaf::io::BlockingByteArrayInputStream::~~BlockingByteArrayInputStream ()` [virtual]

Destructor.

6.119.3 Member Function Documentation

6.119.3.1 `virtual std::size_t decaf::io::BlockingByteArrayInputStream::available () const throw (IOException)` [inline, virtual]

Indicates the number of bytes available to be read without blocking.

Returns:

the data available in the internal buffer.

Exceptions:

IOException (p. 1820) if an error occurs.

Implements `decaf::io::InputStream` (p. 1741).

6.119.3.2 `virtual void decaf::io::BlockingByteArrayInputStream::close () throw (io::IOException)` [virtual]

Closes the target input stream.

Exceptions:

IOException (p. 1820) if an error occurs.

Implements `decaf::io::Closeable` (p. 1019).

6.119.3.3 `virtual void decaf::io::BlockingByteArrayInputStream::lock () throw (decaf::lang::exceptions::RuntimeException)` [inline, virtual]

Locks the object.

Exceptions:

RuntimeException if an error occurs while locking the object.

Implements `decaf::util::concurrent::Synchronizable` (p. 3123).

6.119.3.4 virtual void decaf::io::BlockingByteArrayInputStream::mark (int readLimit *DECAF_UNUSED*) [inline, virtual]

Marks the current position in the stream. A subsequent call to the reset method repositions this stream at the last marked position so that subsequent reads re-read the same bytes. If a stream instance reports that marks are supported then the stream will ensure that the same bytes can be read again after the reset method is called so long the readLimit is not reached.

Parameters:

readLimit - max bytes read before marked position is invalid.

Implements **decaf::io::InputStream** (p. 1741).

6.119.3.5 virtual bool decaf::io::BlockingByteArrayInputStream::markSupported () const [inline, virtual]

Determines if this input stream supports the mark and reset methods. Whether or not mark and reset are supported is an invariant property of a particular input stream instance.

Returns:

true if this stream instance supports marks

Implements **decaf::io::InputStream** (p. 1741).

6.119.3.6 virtual void decaf::io::BlockingByteArrayInputStream::notify () throw (decaf::lang::exceptions::RuntimeException, decaf::lang::exceptions::IllegalMonitorStateException) [inline, virtual]

Signals a waiter on this object that it can now wake up and continue. Must have this object locked before calling.

Exceptions:

IllegalMonitorStateException - if the current thread is not the owner of the the Synchronizable Object.

RuntimeException if an error occurs while notifying one of the waiting threads.

Implements **decaf::util::concurrent::Synchronizable** (p. 3124).

6.119.3.7 virtual void decaf::io::BlockingByteArrayInputStream::notifyAll () throw (decaf::lang::exceptions::RuntimeException, decaf::lang::exceptions::IllegalMonitorStateException) [inline, virtual]

Signals the waiters on this object that it can now wake up and continue. Must have this object locked before calling.

Exceptions:

IllegalMonitorStateException - if the current thread is not the owner of the the Synchronizable Object.

RuntimeException if an error occurs while notifying the waiting threads.

Implements **decaf::util::concurrent::Synchronizable** (p. 3125).

6.119.3.8 `virtual int decaf::io::BlockingByteArrayInputStream::read (unsigned char * buffer, std::size_t offset, std::size_t bufferSize) throw (IOException, lang::exceptions::NullPointerException) [virtual]`

Reads an array of bytes from the buffer. If the desired amount of data is not currently available, this operation will block until the appropriate amount of data is available in the buffer via a call to `setByteArray`.

Parameters:

buffer (out) the target buffer
offset the position in the buffer to start from.
bufferSize the size of the output buffer.

Returns:

the number of bytes read. or -1 if EOF

Exceptions:

IOException (p. 1820) if an error occurs.

Implements **decaf::io::InputStream** (p. 1742).

6.119.3.9 `virtual int decaf::io::BlockingByteArrayInputStream::read () throw (IOException) [virtual]`

Reads a single byte from the buffer. This operation will block until data has been added to the buffer via a call to `setByteArray`.

Returns:

the next byte.

Exceptions:

IOException (p. 1820) if an error occurs.

Implements **decaf::io::InputStream** (p. 1742).

6.119.3.10 `virtual void decaf::io::BlockingByteArrayInputStream::reset () throw (IOException) [inline, virtual]`

Repositions this stream to the position at the time the `mark` method was last called on this input stream. If the method `markSupported` returns true, then: * If the method `mark` has not been called since the stream was created, or the number of bytes read from the stream since `mark` was last called is larger than the argument to `mark` at that last call, then an **IOException** (p. 1820) might be thrown. * If such an **IOException** (p. 1820) is not thrown, then the stream is reset

to a state such that all the bytes read since the most recent call to mark (or since the start of the file, if mark has not been called) will be resupplied to subsequent callers of the read method, followed by any bytes that otherwise would have been the next input data as of the time of the call to reset. If the method markSupported returns false, then: * The call to reset may throw an **IOException** (p. 1820). * If an **IOException** (p. 1820) is not thrown, then the stream is reset to a fixed state that depends on the particular type of the input stream and how it was created. The bytes that will be supplied to subsequent callers of the read method depend on the particular type of the input stream.

Exceptions:

IOException (p. 1820)

Implements **decaf::io::InputStream** (p. 1742).

**6.119.3.11 virtual void decaf::io::BlockingByteArrayInputStream::setByteArray
(const unsigned char * *buffer*, std::size_t *bufferSize*) [virtual]**

Sets the data that this reader uses. Replaces any existing data and resets the read index to the beginning of the buffer. When this method is called, it notifies any other threads that data is now available to be read.

Parameters:

buffer The new data to be copied to the internal buffer.

bufferSize The size of the new buffer.

**6.119.3.12 virtual std::size_t decaf::io::BlockingByteArrayInputStream::skip
(std::size_t *num*) throw (io::IOException,
lang::exceptions::UnsupportedOperationException) [virtual]**

Skips over and discards *n* bytes of data from this input stream. The skip method may, for a variety of reasons, end up skipping over some smaller number of bytes, possibly 0. This may result from any of a number of conditions; reaching end of file before *n* bytes have been skipped is only one possibility. The actual number of bytes skipped is returned. If *n* is negative, no bytes are skipped.

The skip method of **InputStream** (p. 1740) creates a byte array and then repeatedly reads into it until *n* bytes have been read or the end of the stream has been reached. Subclasses are encouraged to provide a more efficient implementation of this method.

Parameters:

num - the number of bytes to skip

Returns:

total bytes skipped

Exceptions:

IOException (p. 1820) if an error occurs

Implements **decaf::io::InputStream** (p. 1743).

6.119.3.13 `virtual bool decaf::io::BlockingByteArrayInputStream::tryLock () throw (decaf::lang::exceptions::RuntimeException) [inline, virtual]`

Attempts to Lock the object, if the lock is already held by another thread than this method returns false.

Returns:

true if the lock was acquired, false if it is already held by another thread.

Exceptions:

RuntimeException if an error occurs while locking the object.

Implements `decaf::util::concurrent::Synchronizable` (p. 3126).

6.119.3.14 `virtual void decaf::io::BlockingByteArrayInputStream::unlock () throw (decaf::lang::exceptions::RuntimeException) [inline, virtual]`

Unlocks the object.

Exceptions:

RuntimeException if an error occurs while unlocking the object.

Implements `decaf::util::concurrent::Synchronizable` (p. 3127).

6.119.3.15 `virtual void decaf::io::BlockingByteArrayInputStream::wait (long long millisecs, int nanos) throw (decaf::lang::exceptions::RuntimeException, decaf::lang::exceptions::IllegalArgumentException, decaf::lang::exceptions::IllegalMonitorStateException, decaf::lang::exceptions::InterruptedException) [inline, virtual]`

Waits on a signal from this object, which is generated by a call to Notify. Must have this object locked before calling. This wait will timeout after the specified time interval. This method is similar to the one argument wait function except that it add a finer grained control over the amount of time that it waits by adding in the additional nanosecond argument.

NOTE: The ability to wait accurately at a nanosecond scale depends on the platform and OS that the Decaf API is running on, some systems do not provide an accurate enough clock to provide this level of granularity.

Parameters:

millisecs the time in milliseconds to wait, or WAIT_INFINITE

nanos additional time in nanoseconds with a range of 0-999999

Exceptions:

IllegalArgumentException if an error occurs or the nanos argument is not in the range of [0-999999]

RuntimeException if an error occurs while waiting on the object.

InterruptedException if the wait is interrupted before it completes.

IllegalMonitorStateException - if the current thread is not the owner of the the Synchronizable Object.

Implements **decaf::util::concurrent::Synchronizable** (p. 3128).

6.119.3.16 virtual void decaf::io::BlockingByteArrayInputStream::wait (long long *milliseconds*) throw (decaf::lang::exceptions::RuntimeException, decaf::lang::exceptions::IllegalMonitorStateException, decaf::lang::exceptions::InterruptedException) [inline, virtual]

Waits on a signal from this object, which is generated by a call to Notify. Must have this object locked before calling. This wait will timeout after the specified time interval.

Parameters:

milliseconds the time in milliseconds to wait, or WAIT_INFINITE

Exceptions:

RuntimeException if an error occurs while waiting on the object.

InterruptedException if the wait is interrupted before it completes.

IllegalMonitorStateException - if the current thread is not the owner of the the Synchronizable Object.

Implements **decaf::util::concurrent::Synchronizable** (p. 3130).

6.119.3.17 virtual void decaf::io::BlockingByteArrayInputStream::wait () throw (decaf::lang::exceptions::RuntimeException, decaf::lang::exceptions::IllegalMonitorStateException, decaf::lang::exceptions::InterruptedException) [inline, virtual]

Waits on a signal from this object, which is generated by a call to Notify. Must have this object locked before calling.

Exceptions:

RuntimeException if an error occurs while waiting on the object.

InterruptedException if the wait is interrupted before it completes.

IllegalMonitorStateException - if the current thread is not the owner of the the Synchronizable Object.

Implements **decaf::util::concurrent::Synchronizable** (p. 3131).

The documentation for this class was generated from the following file:

- src/main/decaf/io/**BlockingByteArrayInputStream.h**

6.120 decaf::lang::Boolean Class Reference

#include <src/main/decaf/lang/Boolean.h> Inheritance diagram for decaf::lang::Boolean:

Public Member Functions

- **Boolean** (bool value)
- **Boolean** (const std::string &value)
- virtual ~**Boolean** ()
- bool **booleanValue** () const
- std::string **toString** () const
- virtual int **compareTo** (const **Boolean** &b) const
*Compares this **Boolean** (p. 732) instance with another.*
- virtual bool **operator==** (const **Boolean** &value) const
Compares equality between this object and the one passed.
- virtual bool **operator<** (const **Boolean** &value) const
Compares this object to another and returns true if this object is considered to be less than the one passed.
- bool **equals** (const **Boolean** &b) const
- virtual int **compareTo** (const bool &b) const
*Compares this **Boolean** (p. 732) instance with another.*
- virtual bool **operator==** (const bool &value) const
Compares equality between this object and the one passed.
- virtual bool **operator<** (const bool &value) const
Compares this object to another and returns true if this object is considered to be less than the one passed.
- bool **equals** (const bool &b) const

Static Public Member Functions

- static **Boolean** **valueOf** (bool value)
- static **Boolean** **valueOf** (const std::string &value)
- static bool **parseBoolean** (const std::string &value)
Parses the String passed and extracts an bool.
- static std::string **toString** (bool value)
Converts the bool to a String representation.

Static Public Attributes

- static const **Boolean** **_FALSE**

The Class object representing the primitive false boolean.

- static const **Boolean** **_TRUE**

The Class object representing the primitive type boolean.

6.120.1 Constructor & Destructor Documentation

6.120.1.1 decaf::lang::Boolean::Boolean (bool *value*)

Parameters:

value - primitive boolean to wrap.

6.120.1.2 decaf::lang::Boolean::Boolean (const std::string & *value*)

Parameters:

value - String value to convert to a boolean.

6.120.1.3 virtual decaf::lang::Boolean::~~Boolean () [inline, virtual]

6.120.2 Member Function Documentation

6.120.2.1 bool decaf::lang::Boolean::booleanValue () const [inline]

Returns:

the primitive boolean value of this object

6.120.2.2 virtual int decaf::lang::Boolean::compareTo (const bool & *b*) const [virtual]

Compares this **Boolean** (p. 732) instance with another.

Parameters:

b - the **Boolean** (p. 732) instance to be compared

Returns:

zero if this object represents the same boolean value as the argument; a positive value if this object represents true and the argument represents false; and a negative value if this object represents false and the argument represents true

Implements **decaf::lang::Comparable**< **bool** > (p. 1083).

6.120.2.3 `virtual int decaf::lang::Boolean::compareTo (const Boolean & b) const`
[virtual]

Compares this **Boolean** (p. 732) instance with another.

Parameters:

b - the **Boolean** (p. 732) instance to be compared

Returns:

zero if this object represents the same boolean value as the argument; a positive value if this object represents true and the argument represents false; and a negative value if this object represents false and the argument represents true

Implements **decaf::lang::Comparable**< **Boolean** > (p. 1083).

6.120.2.4 `bool decaf::lang::Boolean::equals (const bool & b) const` [inline,
virtual]

Returns:

true if the two **Boolean** (p. 732) Objects have the same value.

Implements **decaf::lang::Comparable**< **bool** > (p. 1084).

6.120.2.5 `bool decaf::lang::Boolean::equals (const Boolean & b) const` [inline,
virtual]

Returns:

true if the two **Boolean** (p. 732) Objects have the same value.

Implements **decaf::lang::Comparable**< **Boolean** > (p. 1084).

6.120.2.6 `virtual bool decaf::lang::Boolean::operator< (const bool & value) const`
[virtual]

Compares this object to another and returns true if this object is considered to be less than the one passed. This

Parameters:

value - the value to be compared to this one.

Returns:

true if this object is equal to the one passed.

Implements **decaf::lang::Comparable**< **bool** > (p. 1084).

6.120.2.7 virtual bool decaf::lang::Boolean::operator< (const Boolean & *value*) const [virtual]

Compares this object to another and returns true if this object is considered to be less than the one passed. This

Parameters:

value - the value to be compared to this one.

Returns:

true if this object is equal to the one passed.

Implements **decaf::lang::Comparable< Boolean >** (p. 1084).

6.120.2.8 virtual bool decaf::lang::Boolean::operator== (const bool & *value*) const [virtual]

Compares equality between this object and the one passed.

Parameters:

value - the value to be compared to this one.

Returns:

true if this object is equal to the one passed.

Implements **decaf::lang::Comparable< bool >** (p. 1085).

6.120.2.9 virtual bool decaf::lang::Boolean::operator== (const Boolean & *value*) const [virtual]

Compares equality between this object and the one passed.

Parameters:

value - the value to be compared to this one.

Returns:

true if this object is equal to the one passed.

Implements **decaf::lang::Comparable< Boolean >** (p. 1085).

6.120.2.10 static bool decaf::lang::Boolean::parseBoolean (const std::string & *value*) [static]

Parses the String passed and extracts an bool.

Parameters:

value The std::string value to parse

Returns:

bool value

6.120.2.11 `static std::string decaf::lang::Boolean::toString (bool value) [static]`

Converts the bool to a String representation.

Parameters:

value The bool value to convert.

Returns:

std::string representation of the bool value passed.

6.120.2.12 `std::string decaf::lang::Boolean::toString () const`**Returns:**

the string representation of this Booleans value.

6.120.2.13 `static Boolean decaf::lang::Boolean::valueOf (const std::string & value) [static]`**Parameters:**

value The std::string value to convert to a Boolean (p. 732) instance.

Returns:

a **Boolean** (p. 732) instance of the string value

6.120.2.14 `static Boolean decaf::lang::Boolean::valueOf (bool value) [static]`**Parameters:**

value The bool value to convert to a Boolean (p. 732) instance.

Returns:

a **Boolean** (p. 732) instance of the primitive boolean value

6.120.3 **Field Documentation****6.120.3.1** `const Boolean decaf::lang::Boolean::_FALSE [static]`

The Class object representing the primitive false boolean.

6.120.3.2 `const Boolean decaf::lang::Boolean::_TRUE [static]`

The Class object representing the primitive type boolean.

The documentation for this class was generated from the following file:

- src/main/decaf/lang/**Boolean.h**

6.121 activemq::commands::BooleanExpression Class Reference

#include <src/main/activemq/commands/BooleanExpression.h> Inheritance diagram for activemq::commands::BooleanExpression:

Public Member Functions

- **BooleanExpression** ()
- virtual **~BooleanExpression** ()
- virtual **DataStructure * cloneDataStructure** () const
Clone this obbect and return a new instance that the caller now owns, this will be an exact copy of this one.
- virtual void **copyDataStructure** (const **DataStructure** *src AMQCPP_UNUSED)
Copy the contents of the passed object into this objects members, overwriting any existing data.
- virtual std::string **toString** () const
*Returns a string containing the information for this **DataStructure** (p. 1461) such as its type and value of its elements.*
- virtual bool **equals** (const **DataStructure** *value) const
*Compares the **DataStructure** (p. 1461) passed in to this one, and returns if they are equivalent.*

6.121.1 Constructor & Destructor Documentation

- 6.121.1.1 **activemq::commands::BooleanExpression::BooleanExpression** ()
[inline]
- 6.121.1.2 **virtual activemq::commands::BooleanExpression::~~BooleanExpression** ()
[inline, virtual]

6.121.2 Member Function Documentation

- 6.121.2.1 **virtual DataStructure* activemq::commands::BooleanExpression::cloneDataStructure** () const
[inline, virtual]

Clone this obbect and return a new instance that the caller now owns, this will be an exact copy of this one.

Returns:

new copy of this object.

Implements **activemq::commands::DataStructure** (p. 1461).

6.121.2.2 `virtual void activemq::commands::BooleanExpression::copyDataStructure (const DataStructure *src AMQCPP_UNUSED) [inline, virtual]`

Copy the contents of the passed object into this objects members, overwriting any existing data.

Returns:

src - Source Object

Reimplemented from `activemq::commands::BaseDataStructure` (p. 717).

6.121.2.3 `virtual bool activemq::commands::BooleanExpression::equals (const DataStructure * value) const [inline, virtual]`

Compares the `DataStructure` (p. 1461) passed in to this one, and returns if they are equivalent. Equivalent here means that they are of the same type, and that each element of the objects are the same.

Returns:

true if DataStructure's are Equal.

Implements `activemq::commands::DataStructure` (p. 1463).

References `activemq::commands::BaseDataStructure::equals()`.

6.121.2.4 `virtual std::string activemq::commands::BooleanExpression::toString () const [inline, virtual]`

Returns a string containing the information for this `DataStructure` (p. 1461) such as its type and value of its elements.

Returns:

formatted string useful for debugging.

Reimplemented from `activemq::commands::BaseDataStructure` (p. 718).

References `activemq::commands::BaseDataStructure::toString()`.

The documentation for this class was generated from the following file:

- `src/main/activemq/commands/BooleanExpression.h`

6.122 activemq::wireformat::openwire::utils::BooleanStream Class Reference

Manages the writing and reading of boolean data streams to and from a data source such as a `DataInputStream` or `DataOutputStream`.

```
#include <src/main/activemq/wireformat/openwire/utils/BooleanStream.h>
```

Public Member Functions

- **BooleanStream** ()
- virtual **~BooleanStream** ()
- bool **readBoolean** () throw (decaf::io::IOException)
Read a boolean data element from the internal data buffer.
- void **writeBoolean** (bool value) throw (decaf::io::IOException)
Writes a Boolean value to the internal data buffer.
- void **marshal** (decaf::io::DataOutputStream *dataOut) throw (decaf::io::IOException)
Marshal the data to a DataOutputStream.
- void **marshal** (std::vector< unsigned char > &dataOut)
Marshal the data to a STL vector of unsigned chars.
- void **unmarshal** (decaf::io::DataInputStream *dataIn) throw (decaf::io::IOException)
Unmarshal a Boolean data stream from the Input Stream.
- void **clear** ()
Clears to old position markers, data starts at the beginning.
- int **marshalledSize** ()
Calc the size that data is marshalled to.

6.122.1 Detailed Description

Manages the writing and reading of boolean data streams to and from a data source such as a `DataInputStream` or `DataOutputStream`. The booleans are stored as single bits in the stream, with the stream size pre-pended to the stream when the data is marshalled.

The serialized form of the size field can be between 1 and 3 bytes. If the number of used bytes < 64, size=1 byte If the number of used bytes >=64 and < 256 (size of an unsigned byte), size=2 bytes If the number of used bytes >=256, size=3 bytes

The high-order 2 bits (128 and 64) of the first byte of the size field are used to encode the information about the number of bytes in the size field. The only time the first byte will contain a value >=64 is if there are more bytes in the size field. If the first byte < 64, the value of the byte is simply the size value. If the first byte = 0xC0, the following unsigned byte is the size field. If the first byte = 0x80, the following short (two bytes) are the size field.

6.122.2 Constructor & Destructor Documentation

6.122.2.1 `activemq::wireformat::openwire::utils::BooleanStream::BooleanStream ()`

6.122.2.2 `virtual
activemq::wireformat::openwire::utils::BooleanStream::~~BooleanStream
() [inline, virtual]`

6.122.3 Member Function Documentation

6.122.3.1 `void activemq::wireformat::openwire::utils::BooleanStream::clear ()`

Clears to old position markers, data starts at the beginning.

6.122.3.2 `void activemq::wireformat::openwire::utils::BooleanStream::marshal
(std::vector< unsigned char > & dataOut)`

Marshal the data to a STL vector of unsigned chars.

Parameters:

dataOut - reference to a vector to write the data to.

6.122.3.3 `void activemq::wireformat::openwire::utils::BooleanStream::marshal
(decaf::io::DataOutputStream * dataOut) throw (decaf::io::IOException)`

Marshal the data to a DataOutputStream.

Parameters:

dataOut - Stream to write the data to.

6.122.3.4 `int activemq::wireformat::openwire::utils::BooleanStream::marshalledSize
()`

Calc the size that data is marshalled to.

Returns:

int size of marshalled data.

6.122.3.5 `bool activemq::wireformat::openwire::utils::BooleanStream::readBoolean
() throw (decaf::io::IOException)`

Read a boolean data element from the internal data buffer.

Returns:

boolean from the stream

6.122.3.6 void activemq::wireformat::openwire::utils::BooleanStream::unmarshal
(decaf::io::DataInputStream * *dataIn*) throw (decaf::io::IOException)

Unmarshal a Boolean data stream from the Input Stream.

Parameters:

dataIn - Input Stream to read data from.

6.122.3.7 void activemq::wireformat::openwire::utils::BooleanStream::writeBoolean
(bool *value*) throw (decaf::io::IOException)

Writes a Boolean value to the internal data buffer.

Parameters:

value - boolean data to write.

The documentation for this class was generated from the following file:

- src/main/activemq/wireformat/openwire/utils/**BooleanStream.h**

6.123 decaf::util::concurrent::BrokenBarrierException Class Reference

#include <src/main/decaf/util/concurrent/BrokenBarrierException.h> Inheritance diagram for decaf::util::concurrent::BrokenBarrierException:

Public Member Functions

- **BrokenBarrierException** () throw ()
Default Constructor.
- **BrokenBarrierException** (const decaf::lang::Exception &ex) throw ()
Conversion Constructor from some other Exception.
- **BrokenBarrierException** (const BrokenBarrierException &ex) throw ()
Copy Constructor.
- **BrokenBarrierException** (const std::exception *cause) throw ()
Constructor.
- **BrokenBarrierException** (const char *file, const int lineNumber, const char *msg,...) throw ()
Constructor - Initializes the file name and line number where this message occurred.
- **BrokenBarrierException** (const char *file, const int lineNumber, const std::exception *cause, const char *msg,...) throw ()
Constructor - Initializes the file name and line number where this message occurred.
- virtual **BrokenBarrierException** * clone () const
Clones this exception.
- virtual ~**BrokenBarrierException** () throw ()

6.123.1 Constructor & Destructor Documentation

6.123.1.1 decaf::util::concurrent::BrokenBarrierException::BrokenBarrierException () throw () [inline]

Default Constructor.

6.123.1.2 decaf::util::concurrent::BrokenBarrierException::BrokenBarrierException (const decaf::lang::Exception & ex) throw () [inline]

Conversion Constructor from some other Exception.

Parameters:

ex An exception that should become this type of Exception

References decaf::lang::Exception::Exception().

6.123.1.3 decaf::util::concurrent::BrokenBarrierException::BrokenBarrierException (const BrokenBarrierException & *ex*) throw () [inline]

Copy Constructor.

Parameters:

ex The Exception to copy in this new instance.

References decaf::lang::Exception::Exception().

6.123.1.4 decaf::util::concurrent::BrokenBarrierException::BrokenBarrierException (const std::exception * *cause*) throw () [inline]

Constructor.

Parameters:

cause Pointer to the exception that caused this one to be thrown, the object is cloned caller retains ownership.

6.123.1.5 decaf::util::concurrent::BrokenBarrierException::BrokenBarrierException (const char * *file*, const int *lineNumber*, const char * *msg*, ...) throw () [inline]

Constructor - Initializes the file name and line number where this message occurred. Sets the message to report, using an optional list of arguments to parse into the message

Parameters:

file - The file name where exception occurs
lineNumber - The line number where the exception occurred.
msg - The message to report
... - list of primitives that are formatted into the message

6.123.1.6 decaf::util::concurrent::BrokenBarrierException::BrokenBarrierException (const char * *file*, const int *lineNumber*, const std::exception * *cause*, const char * *msg*, ...) throw () [inline]

Constructor - Initializes the file name and line number where this message occurred. Sets the message to report, using an optional list of arguments to parse into the message

Parameters:

file - The file name where exception occurs
lineNumber - The line number where the exception occurred.
cause - The exception that was the cause for this one to be thrown.
msg - The message to report
... - list of primitives that are formatted into the message

6.123.1.7 **virtual**
 decaf::util::concurrent::BrokenBarrierException::~~BrokenBarrierException
 () throw () [inline, virtual]

6.123.2 Member Function Documentation

6.123.2.1 **virtual BrokenBarrierException* de-**
 caf::util::concurrent::BrokenBarrierException::clone ()
 const [inline, virtual]

Clones this exception. This is useful for cases where you need to preserve the type of the original exception as well as the message. All subclasses should override.

Returns:

 a new instance of an exception that is a clone of this one.

Reimplemented from **decaf::lang::Exception** (p. 1577).

The documentation for this class was generated from the following file:

- `src/main/decaf/util/concurrent/BrokenBarrierException.h`

6.124 activemq::commands::BrokerError Class Reference

This class represents an Exception sent from the Broker.

#include <src/main/activemq/commands/BrokerError.h> Inheritance diagram for activemq::commands::BrokerError:

Data Structures

- struct **StackTraceElement**

Public Member Functions

- **BrokerError** ()
- virtual **~BrokerError** ()
- virtual unsigned char **getDataStructureType** () const
*Get the **DataStructure** (p. 1461) Type as defined in **CommandTypes.h**.*
- virtual **BrokerError** * **cloneDataStructure** () const
Clone this object and return a new instance that the caller now owns, this will be an exact copy of this one.
- virtual void **copyDataStructure** (const **DataStructure** *src)
Copy the contents of the passed object into this objects members, overwriting any existing data.
- virtual **decaf::lang::Pointer**< **commands::Command** > **visit** (**activemq::state::CommandVisitor** *visitor) throw (**exceptions::ActiveMQException**)
Allows a Visitor to visit this command and return a response to the command based on the command type being visited.
- virtual const std::string & **getMessage** () const
Gets the string holding the error message.
- virtual void **setMessage** (const std::string &message)
*Sets the string that contains the error **Message** (p. 2145).*
- virtual const std::string & **getExceptionClass** () const
Gets the string holding the Exception Class name.
- virtual void **setExceptionClass** (const std::string &exceptionClass)
Sets the string that contains the Exception Class name.
- virtual const **decaf::lang::Pointer**< **BrokerError** > & **getCause** () const
Gets the Broker Error that caused this exception.
- virtual void **setCause** (const **decaf::lang::Pointer**< **BrokerError** > &cause)
Sets the Broker Error that caused this exception.

- virtual const std::vector< **decaf::lang::Pointer< StackTraceElement > > & getStackTraceElements** () const

Gets the Stack Trace Elements for the Exception.

- virtual void **setStackTraceElements** (const std::vector< **decaf::lang::Pointer< StackTraceElement > > & stackTraceElements**)

Sets the Stack Trace Elements for this Exception.

6.124.1 Detailed Description

This class represents an Exception sent from the Broker. The Broker sends java Throwables, so we must mimic its structure here.

6.124.2 Constructor & Destructor Documentation

6.124.2.1 **activemq::commands::BrokerError::BrokerError** () [inline]

6.124.2.2 **virtual activemq::commands::BrokerError::~~BrokerError** () [virtual]

6.124.3 Member Function Documentation

6.124.3.1 **virtual BrokerError* activemq::commands::BrokerError::cloneDataStructure** ()
const [inline, virtual]

Clone this object and return a new instance that the caller now owns, this will be an exact copy of this one.

Returns:

new copy of this object.

Implements **activemq::commands::DataStructure** (p. 1461).

References **copyDataStructure()**.

6.124.3.2 **virtual void activemq::commands::BrokerError::copyDataStructure**
(const **DataStructure * src**) [virtual]

Copy the contents of the passed object into this objects members, overwriting any existing data.

Returns:

src - Source Object

Reimplemented from **activemq::commands::BaseCommand** (p. 651).

Referenced by **cloneDataStructure()**.

6.124.3.3 `virtual const decaf::lang::Pointer<BrokerError>&
activemq::commands::BrokerError::getCause () const [inline, virtual]`

Gets the Broker Error that caused this exception.

Returns:

Broker Error Pointer

6.124.3.4 `virtual unsigned char ac-
tivismq::commands::BrokerError::getDataStructureType ()
const [inline, virtual]`

Get the **DataStructure** (p. 1461) Type as defined in CommandTypes.h.

Returns:

The type of the data structure

Implements **activemq::commands::DataStructure** (p. 1464).

6.124.3.5 `virtual const std::string& ac-
tivismq::commands::BrokerError::getExceptionClass ()
const [inline, virtual]`

Gets the string holding the Exception Class name.

Returns:

Exception Class name

6.124.3.6 `virtual const std::string& activemq::commands::BrokerError::getMessage
() const [inline, virtual]`

Gets the string holding the error message.

Returns:

String Message (p. 2145)

6.124.3.7 `virtual const std::vector< decaf::lang::Pointer<StackTraceElement> >&
activemq::commands::BrokerError::getStackTraceElements () const
[inline, virtual]`

Gets the Stack Trace Elements for the Exception.

Returns:

Stack Trace Elements

6.124.3.8 `virtual void activemq::commands::BrokerError::setCause (const decaf::lang::Pointer< BrokerError > & cause)` [inline, virtual]

Sets the Broker Error that caused this exception.

Parameters:

cause - Broker Error

6.124.3.9 `virtual void activemq::commands::BrokerError::setExceptionClass (const std::string & exceptionClass)` [inline, virtual]

Sets the string that contains the Exception Class name.

Parameters:

exceptionClass - String Exception Class name

6.124.3.10 `virtual void activemq::commands::BrokerError::setMessage (const std::string & message)` [inline, virtual]

Sets the string that contains the error **Message** (p.2145).

Parameters:

message - String Error **Message** (p. 2145)

6.124.3.11 `virtual void activemq::commands::BrokerError::setStackTraceElements (const std::vector< decaf::lang::Pointer< StackTraceElement > > & stackTraceElements)` [inline, virtual]

Sets the Stack Trace Elements for this Exception.

Parameters:

stackTraceElements - Stack Trace Elements

6.124.3.12 `virtual decaf::lang::Pointer<commands::Command> activemq::commands::BrokerError::visit (activemq::state::CommandVisitor * visitor) throw (exceptions::ActiveMQException)` [virtual]

Allows a Visitor to visit this command and return a response to the command based on the command type being visited. The command will call the proper processXXX method in the visitor.

Returns:

a **Response** (p. 2781) to the visitor being called or NULL if no response.

Implements **activemq::commands::Command** (p.1067).

The documentation for this class was generated from the following file:

- src/main/activemq/commands/**BrokerError.h**

6.125 activemq::exceptions::BrokerException Class Reference

#include <src/main/activemq/exceptions/BrokerException.h> Inheritance diagram for activemq::exceptions::BrokerException:

Public Member Functions

- **BrokerException** () throw ()
- **BrokerException** (const exceptions::ActiveMQException &ex) throw ()
- **BrokerException** (const **BrokerException** &ex) throw ()
- **BrokerException** (const char *file, const int lineNumber, const char *msg,...) throw ()
- **BrokerException** (const char *file, const int lineNumber, const commands::BrokerError *error) throw ()
- virtual **BrokerException** * **clone** () const
Clones this exception.
- virtual ~**BrokerException** () throw ()

6.125.1 Constructor & Destructor Documentation

- 6.125.1.1 **activemq::exceptions::BrokerException::BrokerException** () throw ()
[inline]
- 6.125.1.2 **activemq::exceptions::BrokerException::BrokerException** (const exceptions::ActiveMQException & *ex*) throw () [inline]
- 6.125.1.3 **activemq::exceptions::BrokerException::BrokerException** (const **BrokerException** & *ex*) throw () [inline]
- 6.125.1.4 **activemq::exceptions::BrokerException::BrokerException** (const char * *file*, const int *lineNumber*, const char * *msg*, ...) throw () [inline]
- 6.125.1.5 **activemq::exceptions::BrokerException::BrokerException** (const char * *file*, const int *lineNumber*, const commands::BrokerError * *error*) throw () [inline]

References decaf::lang::Exception::setMark(), and decaf::lang::Exception::setMessage().

- 6.125.1.6 **virtual activemq::exceptions::BrokerException::~~BrokerException** ()
throw () [inline, virtual]

6.125.2 Member Function Documentation

- 6.125.2.1 **virtual BrokerException*** **activemq::exceptions::BrokerException::clone** () const [inline, virtual]

Clones this exception. This is useful for cases where you need to preserve the type of the original exception as well as the message. All subclasses should override.

Reimplemented from **activemq::exceptions::ActiveMQException** (p. 306).

The documentation for this class was generated from the following file:

- `src/main/activemq/exceptions/BrokerException.h`

6.126 activemq::commands::BrokerId Class Reference

Protected Attributes

- std::string value

6.126.1 Member Typedef Documentation

6.126.1.1 `typedef decaf::lang::PointerComparator<BrokerId>
activemq::commands::BrokerId::COMPARATOR`

6.126.2 Constructor & Destructor Documentation

6.126.2.1 `activemq::commands::BrokerId::BrokerId ()`

6.126.2.2 `activemq::commands::BrokerId::BrokerId (const BrokerId & other)`

6.126.2.3 `virtual activemq::commands::BrokerId::~~BrokerId () [virtual]`

6.126.3 Member Function Documentation

6.126.3.1 `virtual BrokerId* activemq::commands::BrokerId::cloneDataStructure ()
const [virtual]`

Clone this object and return a new instance that the caller now owns, this will be an exact copy of this one.

Returns:

new copy of this object.

Implements `activemq::commands::DataStructure` (p. 1461).

6.126.3.2 `virtual int activemq::commands::BrokerId::compareTo (const BrokerId &
value) const [virtual]`

6.126.3.3 `virtual void activemq::commands::BrokerId::copyDataStructure (const
DataStructure * src) [virtual]`

Copy the contents of the passed object into this object's members, overwriting any existing data.

Parameters:

src - Source Object

Implements `activemq::commands::DataStructure` (p. 1462).

6.126.3.4 `virtual bool activemq::commands::BrokerId::equals (const BrokerId &
value) const [virtual]`

6.126.3.5 `virtual bool activemq::commands::BrokerId::equals (const DataStructure
* value) const [virtual]`

Compares the `DataStructure` (p. 1461) passed in to this one, and returns if they are equivalent. Equivalent here means that they are of the same type, and that each element of the objects are the same.

Returns:

true if DataStructure's are Equal.

Implements **activemq::commands::DataStructure** (p. 1463).

6.126.3.6 virtual unsigned char activemq::commands::BrokerId::getDataStructureType ()
const [virtual]

Get the unique identifier that this object and its own Marshaler share.

Returns:

new **DataStructure** (p. 1461) type copy.

Implements **activemq::commands::DataStructure** (p. 1464).

6.126.3.7 virtual std::string& activemq::commands::BrokerId::getValue ()
[virtual]

6.126.3.8 virtual const std::string& activemq::commands::BrokerId::getValue ()
const [virtual]

6.126.3.9 virtual bool activemq::commands::BrokerId::operator< (const BrokerId
& *value*) const [virtual]

6.126.3.10 BrokerId& activemq::commands::BrokerId::operator= (const BrokerId
& *other*)

6.126.3.11 virtual bool activemq::commands::BrokerId::operator== (const
BrokerId & *value*) const [virtual]

6.126.3.12 virtual void activemq::commands::BrokerId::setValue (const std::string
& *value*) [virtual]

6.126.3.13 virtual std::string activemq::commands::BrokerId::toString () const
[virtual]

Returns a string containing the information for this **DataStructure** (p. 1461) such as its type and value of its elements.

Returns:

formatted string useful for debugging.

Reimplemented from **activemq::commands::BaseDataStructure** (p. 718).

6.126.4 Field Documentation

6.126.4.1 const unsigned char activemq::commands::BrokerId::ID_BROKERID =
124 [static]

6.126.4.2 std::string activemq::commands::BrokerId::value [protected]

The documentation for this class was generated from the following file:

- `src/main/activemq/commands/`**BrokerId.h**

6.127 activemq::wireformat::openwire::marshal::v3::BrokerIdMarshaller Class Reference

Marshaling code for Open Wire Format for **BrokerIdMarshaller** (p. 755).

Get the Data Structure Type that identifies this Marshaler.
- virtual void **tightUnmarshal** (**OpenWireFormat *wireFormat**, **commands::DataStructure *dataStructure**, **decaf::io::DataInputStream *dataIn**, **utils::BooleanStream *bs**) throw (**decaf::io::IOException**)
Un-marshal an object instance from the data input stream.
- virtual int **tightMarshal** (**OpenWireFormat *wireFormat**, **commands::DataStructure *dataStructure**, **utils::BooleanStream *bs**) throw (**decaf::io::IOException**)
Write the booleans that this object uses to a BooleanStream.
- virtual void **tightMarshal2** (**OpenWireFormat *wireFormat**, **commands::DataStructure *dataStructure**, **decaf::io::DataOutputStream *dataOut**, **utils::BooleanStream *bs**) throw (**decaf::io::IOException**)
Write a object instance to data output stream.
- virtual void **looseUnmarshal** (**OpenWireFormat *wireFormat**, **commands::DataStructure *dataStructure**, **decaf::io::DataInputStream *dataIn**) throw (**decaf::io::IOException**)
Un-marshal an object instance from the data input stream.
- virtual void **looseMarshal** (**OpenWireFormat *wireFormat**, **commands::DataStructure *dataStructure**, **decaf::io::DataOutputStream *dataOut**) throw (**decaf::io::IOException**)
Write a object instance to data output stream.

6.127.1 Detailed Description

Marshaling code for Open Wire Format for **BrokerIdMarshaller** (p. 755). NOTE!: This file is auto generated - do not modify! if you need to make a change, please see the Java Classes in the activemq-openwire-generator module

6.127.2 Constructor & Destructor Documentation

6.127.2.1 `activemq::wireformat::openwire::marshal::v3::BrokerIdMarshaller::BrokerIdMarshaller()` [inline]

6.127.2.2 `virtual activemq::wireformat::openwire::marshal::v3::BrokerIdMarshaller::~~BrokerIdMarshaller()` [inline, virtual]

6.127.3 Member Function Documentation

6.127.3.1 `virtual commands::DataStructure* activemq::wireformat::openwire::marshal::v3::BrokerIdMarshaller::createObject() const` [virtual]

Creates a new instance of this marshalable type.

Returns:

new DataStructure object pointer caller owns it.

Implements `activemq::wireformat::openwire::marshal::DataStreamMarshaller` (p. 1419).

6.127.3.2 `virtual unsigned char activemq::wireformat::openwire::marshal::v3::BrokerIdMarshaller::getDataStructureType() const` [virtual]

Get the Data Structure Type that identifies this Marshaler.

Returns:

byte holding the data structure type value

Implements `activemq::wireformat::openwire::marshal::DataStreamMarshaller` (p. 1424).

6.127.3.3 `virtual void activemq::wireformat::openwire::marshal::v3::BrokerIdMarshaller::looseMarshal(OpenWireFormat * wireFormat, commands::DataStructure * dataStructure, decaf::io::DataOutputStream * dataOut) throw (decaf::io::IOException)` [virtual]

Write a object instance to data output stream.

Parameters:

wireFormat - describes the wire format of the broker

dataStructure - Object to be marshaled

dataOut - BinaryWriter that provides that data sink

Exceptions:

IOException if an error occurs during the marshal.

Implements **activemq::wireformat::openwire::marshal::DataStreamMarshaller** (p. 1430).

6.127.3.4 virtual void **activemq::wireformat::openwire::marshal::v3::BrokerIdMarshaller::looseUnmarshal** (OpenWireFormat * *wireFormat*, commands::DataStructure * *dataStructure*, decaf::io::DataInputStream * *dataIn*) throw (decaf::io::IOException) [virtual]

Un-marshall an object instance from the data input stream.

Parameters:

wireFormat - describes the wire format of the broker

dataStructure - Object to be marshaled

dataIn - BinaryReader that provides that data source

Exceptions:

IOException if an error occurs during the unmarshal.

Implements **activemq::wireformat::openwire::marshal::DataStreamMarshaller** (p. 1436).

6.127.3.5 virtual int **activemq::wireformat::openwire::marshal::v3::BrokerIdMarshaller::tightMarshal1** (OpenWireFormat * *wireFormat*, commands::DataStructure * *dataStructure*, utils::BooleanStream * *bs*) throw (decaf::io::IOException) [virtual]

Write the booleans that this object uses to a BooleanStream.

Parameters:

wireFormat - describes the wire format of the broker

dataStructure - Object to be marshaled

bs - BooleanStream stream used to pack bits from the wire.

Returns:

int value indicating the size of the marshaled object.

Exceptions:

IOException if an error occurs during the marshal.

Implements **activemq::wireformat::openwire::marshal::DataStreamMarshaller** (p. 1442).

6.127.3.6 virtual void activemq::wireformat::openwire::marshal::v3::BrokerIdMarshaller::tightMarshal2 (OpenWireFormat * *wireFormat*, commands::DataStructure * *dataStructure*, decaf::io::DataOutputStream * *dataOut*, utils::BooleanStream * *bs*) throw (decaf::io::IOException) [virtual]

Write a object instance to data output stream.

Parameters:

wireFormat - describes the wire format of the broker
dataStructure - Object to be marshaled
dataOut - BinaryReader that provides that data sink
bs - BooleanStream stream used to pack bits from the wire.

Exceptions:

IOException if an error occurs during the marshal.

Implements **activemq::wireformat::openwire::marshal::DataStreamMarshaller** (p. 1448).

6.127.3.7 virtual void activemq::wireformat::openwire::marshal::v3::BrokerIdMarshaller::tightUnmarshal (OpenWireFormat * *wireFormat*, commands::DataStructure * *dataStructure*, decaf::io::DataInputStream * *dataIn*, utils::BooleanStream * *bs*) throw (decaf::io::IOException) [virtual]

Un-marshal an object instance from the data input stream.

Parameters:

wireFormat - describes the wire format of the broker.
dataStructure - Object to be un-marshaled.
dataIn - BinaryReader that provides that data.
bs - BooleanStream stream used to unpack bits from the wire.

Exceptions:

IOException if an error occurs during the unmarshal.

Implements **activemq::wireformat::openwire::marshal::DataStreamMarshaller** (p. 1454).

Write a object instance to data output stream.

6.128.1 Detailed Description

Marshaling code for Open Wire Format for **BrokerIdMarshaller** (p. 759). NOTE!: This file is auto generated - do not modify! if you need to make a change, please see the Java Classes in the activemq-openwire-generator module

6.128.2 Constructor & Destructor Documentation

6.128.2.1 `activemq::wireformat::openwire::marshal::v1::BrokerIdMarshaller::BrokerIdMarshaller()` [inline]

6.128.2.2 `virtual activemq::wireformat::openwire::marshal::v1::BrokerIdMarshaller::~~BrokerIdMarshaller()` [inline, virtual]

6.128.3 Member Function Documentation

6.128.3.1 `virtual commands::DataStructure* activemq::wireformat::openwire::marshal::v1::BrokerIdMarshaller::createObject() const` [virtual]

Creates a new instance of this marshalable type.

Returns:

new DataStructure object pointer caller owns it.

Implements `activemq::wireformat::openwire::marshal::DataStreamMarshaller` (p. 1419).

6.128.3.2 `virtual unsigned char activemq::wireformat::openwire::marshal::v1::BrokerIdMarshaller::getDataStructureType() const` [virtual]

Get the Data Structure Type that identifies this Marshaler.

Returns:

byte holding the data structure type value

Implements `activemq::wireformat::openwire::marshal::DataStreamMarshaller` (p. 1424).

6.128.3.3 `virtual void activemq::wireformat::openwire::marshal::v1::BrokerIdMarshaller::looseMarshal(OpenWireFormat * wireFormat, commands::DataStructure * dataStructure, decaf::io::DataOutputStream * dataOut) throw (decaf::io::IOException)` [virtual]

Write a object instance to data output stream.

Parameters:

wireFormat - describes the wire format of the broker

dataStructure - Object to be marshaled

dataOut - BinaryWriter that provides that data sink

Exceptions:

IOException if an error occurs during the marshal.

Implements **activemq::wireformat::openwire::marshal::DataStreamMarshaller** (p. 1430).

6.128.3.4 virtual void **activemq::wireformat::openwire::marshal::v1::BrokerIdMarshaller::looseUnmarshal** (**OpenWireFormat** * *wireFormat*, **commands::DataStructure** * *dataStructure*, **decaf::io::DataInputStream** * *dataIn*) throw (**decaf::io::IOException**) [virtual]

Un-marshal an object instance from the data input stream.

Parameters:

wireFormat - describes the wire format of the broker

dataStructure - Object to be marshaled

dataIn - **BinaryReader** that provides that data source

Exceptions:

IOException if an error occurs during the unmarshal.

Implements **activemq::wireformat::openwire::marshal::DataStreamMarshaller** (p. 1436).

6.128.3.5 virtual int **activemq::wireformat::openwire::marshal::v1::BrokerIdMarshaller::tightMarshal1** (**OpenWireFormat** * *wireFormat*, **commands::DataStructure** * *dataStructure*, **utils::BooleanStream** * *bs*) throw (**decaf::io::IOException**) [virtual]

Write the booleans that this object uses to a **BooleanStream**.

Parameters:

wireFormat - describes the wire format of the broker

dataStructure - Object to be marshaled

bs - **BooleanStream** stream used to pack bits from the wire.

Returns:

int value indicating the size of the marshaled object.

Exceptions:

IOException if an error occurs during the marshal.

Implements **activemq::wireformat::openwire::marshal::DataStreamMarshaller** (p. 1442).

6.128.3.6 virtual void activemq::wireformat::openwire::marshal::v1::BrokerIdMarshaller::tightMarshal2 (OpenWireFormat * *wireFormat*, commands::DataStructure * *dataStructure*, decaf::io::DataOutputStream * *dataOut*, utils::BooleanStream * *bs*) throw (decaf::io::IOException) [virtual]

Write a object instance to data output stream.

Parameters:

wireFormat - describes the wire format of the broker
dataStructure - Object to be marshaled
dataOut - BinaryReader that provides that data sink
bs - BooleanStream stream used to pack bits from the wire.

Exceptions:

IOException if an error occurs during the marshal.

Implements **activemq::wireformat::openwire::marshal::DataStreamMarshaller** (p. 1448).

6.128.3.7 virtual void activemq::wireformat::openwire::marshal::v1::BrokerIdMarshaller::tightUnmarshal (OpenWireFormat * *wireFormat*, commands::DataStructure * *dataStructure*, decaf::io::DataInputStream * *dataIn*, utils::BooleanStream * *bs*) throw (decaf::io::IOException) [virtual]

Un-marshal an object instance from the data input stream.

Parameters:

wireFormat - describes the wire format of the broker.
dataStructure - Object to be un-marshaled.
dataIn - BinaryReader that provides that data.
bs - BooleanStream stream used to unpack bits from the wire.

Exceptions:

IOException if an error occurs during the unmarshal.

Implements **activemq::wireformat::openwire::marshal::DataStreamMarshaller** (p. 1454).

6.129.1 Detailed Description

Marshaling code for Open Wire Format for **BrokerIdMarshaller** (p. 763). NOTE!: This file is auto generated - do not modify! if you need to make a change, please see the Java Classes in the activemq-openwire-generator module

6.129.2 Constructor & Destructor Documentation

6.129.2.1 `activemq::wireformat::openwire::marshal::v4::BrokerIdMarshaller::BrokerIdMarshaller()` [inline]

6.129.2.2 `virtual activemq::wireformat::openwire::marshal::v4::BrokerIdMarshaller::~~BrokerIdMarshaller()` [inline, virtual]

6.129.3 Member Function Documentation

6.129.3.1 `virtual commands::DataStructure* activemq::wireformat::openwire::marshal::v4::BrokerIdMarshaller::createObject() const` [virtual]

Creates a new instance of this marshalable type.

Returns:

new DataStructure object pointer caller owns it.

Implements `activemq::wireformat::openwire::marshal::DataStreamMarshaller` (p. 1419).

6.129.3.2 `virtual unsigned char activemq::wireformat::openwire::marshal::v4::BrokerIdMarshaller::getDataStructureType() const` [virtual]

Get the Data Structure Type that identifies this Marshaler.

Returns:

byte holding the data structure type value

Implements `activemq::wireformat::openwire::marshal::DataStreamMarshaller` (p. 1424).

6.129.3.3 `virtual void activemq::wireformat::openwire::marshal::v4::BrokerIdMarshaller::looseMarshal(OpenWireFormat * wireFormat, commands::DataStructure * dataStructure, decaf::io::DataOutputStream * dataOut) throw (decaf::io::IOException)` [virtual]

Write a object instance to data output stream.

Parameters:

wireFormat - describes the wire format of the broker

dataStructure - Object to be marshaled

dataOut - BinaryWriter that provides that data sink

Exceptions:

IOException if an error occurs during the marshal.

Implements **activemq::wireformat::openwire::marshal::DataStreamMarshaller** (p. 1430).

6.129.3.4 virtual void **activemq::wireformat::openwire::marshal::v4::BrokerIdMarshaller::looseUnmarshal** (**OpenWireFormat** * *wireFormat*, **commands::DataStructure** * *dataStructure*, **decaf::io::DataInputStream** * *dataIn*) throw (**decaf::io::IOException**) [virtual]

Un-marshal an object instance from the data input stream.

Parameters:

wireFormat - describes the wire format of the broker

dataStructure - Object to be marshaled

dataIn - **BinaryReader** that provides that data source

Exceptions:

IOException if an error occurs during the unmarshal.

Implements **activemq::wireformat::openwire::marshal::DataStreamMarshaller** (p. 1436).

6.129.3.5 virtual int **activemq::wireformat::openwire::marshal::v4::BrokerIdMarshaller::tightMarshal1** (**OpenWireFormat** * *wireFormat*, **commands::DataStructure** * *dataStructure*, **utils::BooleanStream** * *bs*) throw (**decaf::io::IOException**) [virtual]

Write the booleans that this object uses to a **BooleanStream**.

Parameters:

wireFormat - describes the wire format of the broker

dataStructure - Object to be marshaled

bs - **BooleanStream** stream used to pack bits from the wire.

Returns:

int value indicating the size of the marshaled object.

Exceptions:

IOException if an error occurs during the marshal.

Implements **activemq::wireformat::openwire::marshal::DataStreamMarshaller** (p. 1442).

6.129.3.6 virtual void activemq::wireformat::openwire::marshal::v4::BrokerIdMarshaller::tightMarshal2 (OpenWireFormat * *wireFormat*, commands::DataStructure * *dataStructure*, decaf::io::DataOutputStream * *dataOut*, utils::BooleanStream * *bs*) throw (decaf::io::IOException) [virtual]

Write a object instance to data output stream.

Parameters:

wireFormat - describes the wire format of the broker
dataStructure - Object to be marshaled
dataOut - BinaryReader that provides that data sink
bs - BooleanStream stream used to pack bits from the wire.

Exceptions:

IOException if an error occurs during the marshal.

Implements **activemq::wireformat::openwire::marshal::DataStreamMarshaller** (p. 1448).

6.129.3.7 virtual void activemq::wireformat::openwire::marshal::v4::BrokerIdMarshaller::tightUnmarshal (OpenWireFormat * *wireFormat*, commands::DataStructure * *dataStructure*, decaf::io::DataInputStream * *dataIn*, utils::BooleanStream * *bs*) throw (decaf::io::IOException) [virtual]

Un-marshal an object instance from the data input stream.

Parameters:

wireFormat - describes the wire format of the broker.
dataStructure - Object to be un-marshaled.
dataIn - BinaryReader that provides that data.
bs - BooleanStream stream used to unpack bits from the wire.

Exceptions:

IOException if an error occurs during the unmarshal.

Implements **activemq::wireformat::openwire::marshal::DataStreamMarshaller** (p. 1454).

The documentation for this class was generated from the following file:

Write a object instance to data output stream.

6.130.1 Detailed Description

Marshaling code for Open Wire Format for **BrokerIdMarshaller** (p. 767). NOTE!: This file is auto generated - do not modify! if you need to make a change, please see the Java Classes in the activemq-openwire-generator module

6.130.2 Constructor & Destructor Documentation

6.130.2.1 `activemq::wireformat::openwire::marshal::v5::BrokerIdMarshaller::BrokerIdMarshaller()` [inline]

6.130.2.2 `virtual activemq::wireformat::openwire::marshal::v5::BrokerIdMarshaller::~~BrokerIdMarshaller()` [inline, virtual]

6.130.3 Member Function Documentation

6.130.3.1 `virtual commands::DataStructure* activemq::wireformat::openwire::marshal::v5::BrokerIdMarshaller::createObject() const` [virtual]

Creates a new instance of this marshalable type.

Returns:

new DataStructure object pointer caller owns it.

Implements `activemq::wireformat::openwire::marshal::DataStreamMarshaller` (p. 1419).

6.130.3.2 `virtual unsigned char activemq::wireformat::openwire::marshal::v5::BrokerIdMarshaller::getDataStructureType() const` [virtual]

Get the Data Structure Type that identifies this Marshaler.

Returns:

byte holding the data structure type value

Implements `activemq::wireformat::openwire::marshal::DataStreamMarshaller` (p. 1424).

6.130.3.3 `virtual void activemq::wireformat::openwire::marshal::v5::BrokerIdMarshaller::looseMarshal(OpenWireFormat * wireFormat, commands::DataStructure * dataStructure, decaf::io::DataOutputStream * dataOut) throw (decaf::io::IOException)` [virtual]

Write a object instance to data output stream.

Parameters:

wireFormat - describes the wire format of the broker

dataStructure - Object to be marshaled

dataOut - BinaryWriter that provides that data sink

Exceptions:

IOException if an error occurs during the marshal.

Implements **activemq::wireformat::openwire::marshal::DataStreamMarshaller** (p. 1430).

6.130.3.4 virtual void **activemq::wireformat::openwire::marshal::v5::BrokerIdMarshaller::looseUnmarshal** (**OpenWireFormat** * *wireFormat*, **commands::DataStructure** * *dataStructure*, **decaf::io::DataInputStream** * *dataIn*) throw (**decaf::io::IOException**) [virtual]

Un-marshal an object instance from the data input stream.

Parameters:

wireFormat - describes the wire format of the broker

dataStructure - Object to be marshaled

dataIn - **BinaryReader** that provides that data source

Exceptions:

IOException if an error occurs during the unmarshal.

Implements **activemq::wireformat::openwire::marshal::DataStreamMarshaller** (p. 1436).

6.130.3.5 virtual int **activemq::wireformat::openwire::marshal::v5::BrokerIdMarshaller::tightMarshal1** (**OpenWireFormat** * *wireFormat*, **commands::DataStructure** * *dataStructure*, **utils::BooleanStream** * *bs*) throw (**decaf::io::IOException**) [virtual]

Write the booleans that this object uses to a **BooleanStream**.

Parameters:

wireFormat - describes the wire format of the broker

dataStructure - Object to be marshaled

bs - **BooleanStream** stream used to pack bits from the wire.

Returns:

int value indicating the size of the marshaled object.

Exceptions:

IOException if an error occurs during the marshal.

Implements **activemq::wireformat::openwire::marshal::DataStreamMarshaller** (p. 1442).

6.130.3.6 virtual void activemq::wireformat::openwire::marshal::v5::BrokerIdMarshaller::tightMarshal2 (OpenWireFormat * *wireFormat*, commands::DataStructure * *dataStructure*, decaf::io::DataOutputStream * *dataOut*, utils::BooleanStream * *bs*) throw (decaf::io::IOException) [virtual]

Write a object instance to data output stream.

Parameters:

wireFormat - describes the wire format of the broker
dataStructure - Object to be marshaled
dataOut - BinaryReader that provides that data sink
bs - BooleanStream stream used to pack bits from the wire.

Exceptions:

IOException if an error occurs during the marshal.

Implements **activemq::wireformat::openwire::marshal::DataStreamMarshaller** (p. 1448).

6.130.3.7 virtual void activemq::wireformat::openwire::marshal::v5::BrokerIdMarshaller::tightUnmarshal (OpenWireFormat * *wireFormat*, commands::DataStructure * *dataStructure*, decaf::io::DataInputStream * *dataIn*, utils::BooleanStream * *bs*) throw (decaf::io::IOException) [virtual]

Un-marshal an object instance from the data input stream.

Parameters:

wireFormat - describes the wire format of the broker.
dataStructure - Object to be un-marshaled.
dataIn - BinaryReader that provides that data.
bs - BooleanStream stream used to unpack bits from the wire.

Exceptions:

IOException if an error occurs during the unmarshal.

Implements **activemq::wireformat::openwire::marshal::DataStreamMarshaller** (p. 1454).

The documentation for this class was generated from the following file:

- src/main/activemq/wireformat/openwire/marshal/v5/**BrokerIdMarshaller.h**

6.131 activemq::wireformat::openwire::marshal::v2::BrokerIdMarshaller Class Reference

Marshaling code for Open Wire Format for **BrokerIdMarshaller** (p. 771).

Write a object instance to data output stream.

6.131.1 Detailed Description

Marshaling code for Open Wire Format for **BrokerIdMarshaller** (p. 771). NOTE!: This file is auto generated - do not modify! if you need to make a change, please see the Java Classes in the activemq-openwire-generator module

6.131.2 Constructor & Destructor Documentation

6.131.2.1 `activemq::wireformat::openwire::marshal::v2::BrokerIdMarshaller::BrokerIdMarshaller()` [inline]

6.131.2.2 `virtual activemq::wireformat::openwire::marshal::v2::BrokerIdMarshaller::~~BrokerIdMarshaller()` [inline, virtual]

6.131.3 Member Function Documentation

6.131.3.1 `virtual commands::DataStructure* activemq::wireformat::openwire::marshal::v2::BrokerIdMarshaller::createObject() const` [virtual]

Creates a new instance of this marshalable type.

Returns:

new DataStructure object pointer caller owns it.

Implements `activemq::wireformat::openwire::marshal::DataStreamMarshaller` (p. 1419).

6.131.3.2 `virtual unsigned char activemq::wireformat::openwire::marshal::v2::BrokerIdMarshaller::getDataStructureType() const` [virtual]

Get the Data Structure Type that identifies this Marshaler.

Returns:

byte holding the data structure type value

Implements `activemq::wireformat::openwire::marshal::DataStreamMarshaller` (p. 1424).

6.131.3.3 `virtual void activemq::wireformat::openwire::marshal::v2::BrokerIdMarshaller::looseMarshal(OpenWireFormat * wireFormat, commands::DataStructure * dataStructure, decaf::io::DataOutputStream * dataOut) throw (decaf::io::IOException)` [virtual]

Write a object instance to data output stream.

Parameters:

wireFormat - describes the wire format of the broker

dataStructure - Object to be marshaled

dataOut - BinaryWriter that provides that data sink

Exceptions:

IOException if an error occurs during the marshal.

Implements **activemq::wireformat::openwire::marshal::DataStreamMarshaller** (p. 1430).

6.131.3.4 virtual void **activemq::wireformat::openwire::marshal::v2::BrokerIdMarshaller::looseUnmarshal** (**OpenWireFormat** * *wireFormat*, **commands::DataStructure** * *dataStructure*, **decaf::io::DataInputStream** * *dataIn*) throw (**decaf::io::IOException**) [virtual]

Un-marshal an object instance from the data input stream.

Parameters:

wireFormat - describes the wire format of the broker

dataStructure - Object to be marshaled

dataIn - **BinaryReader** that provides that data source

Exceptions:

IOException if an error occurs during the unmarshal.

Implements **activemq::wireformat::openwire::marshal::DataStreamMarshaller** (p. 1436).

6.131.3.5 virtual int **activemq::wireformat::openwire::marshal::v2::BrokerIdMarshaller::tightMarshal1** (**OpenWireFormat** * *wireFormat*, **commands::DataStructure** * *dataStructure*, **utils::BooleanStream** * *bs*) throw (**decaf::io::IOException**) [virtual]

Write the booleans that this object uses to a **BooleanStream**.

Parameters:

wireFormat - describes the wire format of the broker

dataStructure - Object to be marshaled

bs - **BooleanStream** stream used to pack bits from the wire.

Returns:

int value indicating the size of the marshaled object.

Exceptions:

IOException if an error occurs during the marshal.

Implements **activemq::wireformat::openwire::marshal::DataStreamMarshaller** (p. 1442).

6.131.3.6 virtual void activemq::wireformat::openwire::marshal::v2::BrokerIdMarshaller::tightMarshal2 (OpenWireFormat * *wireFormat*, commands::DataStructure * *dataStructure*, decaf::io::DataOutputStream * *dataOut*, utils::BooleanStream * *bs*) throw (decaf::io::IOException) [virtual]

Write a object instance to data output stream.

Parameters:

wireFormat - describes the wire format of the broker
dataStructure - Object to be marshaled
dataOut - BinaryReader that provides that data sink
bs - BooleanStream stream used to pack bits from the wire.

Exceptions:

IOException if an error occurs during the marshal.

Implements **activemq::wireformat::openwire::marshal::DataStreamMarshaller** (p. 1448).

6.131.3.7 virtual void activemq::wireformat::openwire::marshal::v2::BrokerIdMarshaller::tightUnmarshal (OpenWireFormat * *wireFormat*, commands::DataStructure * *dataStructure*, decaf::io::DataInputStream * *dataIn*, utils::BooleanStream * *bs*) throw (decaf::io::IOException) [virtual]

Un-marshal an object instance from the data input stream.

Parameters:

wireFormat - describes the wire format of the broker.
dataStructure - Object to be un-marshaled.
dataIn - BinaryReader that provides that data.
bs - BooleanStream stream used to unpack bits from the wire.

Exceptions:

IOException if an error occurs during the unmarshal.

Implements **activemq::wireformat::openwire::marshal::DataStreamMarshaller** (p. 1454).

The documentation for this class was generated from the following file:

- src/main/activemq/wireformat/openwire/marshal/v2/**BrokerIdMarshaller.h**

6.132.1 Constructor & Destructor Documentation

6.132.1.1 `activemq::commands::BrokerInfo::BrokerInfo (const BrokerInfo &)`
[inline, protected]

6.132.1.2 `activemq::commands::BrokerInfo::BrokerInfo ()`

6.132.1.3 `virtual activemq::commands::BrokerInfo::~~BrokerInfo ()` [virtual]

6.132.2 Member Function Documentation

6.132.2.1 `virtual BrokerInfo* activemq::commands::BrokerInfo::cloneDataStructure () const` [virtual]

Clone this object and return a new instance that the caller now owns, this will be an exact copy of this one.

Returns:

new copy of this object.

Implements `activemq::commands::DataStructure` (p. 1461).

6.132.2.2 `virtual void activemq::commands::BrokerInfo::copyDataStructure (const DataStructure * src)` [virtual]

Copy the contents of the passed object into this object's members, overwriting any existing data.

Parameters:

src - Source Object

Reimplemented from `activemq::commands::BaseCommand` (p. 651).

6.132.2.3 `virtual bool activemq::commands::BrokerInfo::equals (const DataStructure * value) const` [virtual]

Compares the `DataStructure` (p. 1461) passed in to this one, and returns if they are equivalent. Equivalent here means that they are of the same type, and that each element of the objects are the same.

Returns:

true if DataStructure's are Equal.

Reimplemented from `activemq::commands::BaseCommand` (p. 651).

- 6.132.2.4 `virtual Pointer<BrokerId>& activemq::commands::BrokerInfo::getBrokerId ()`
[virtual]
- 6.132.2.5 `virtual const Pointer<BrokerId>& activemq::commands::BrokerInfo::getBrokerId () const`
[virtual]

[virtual]
- 6.132.2.7 `virtual const std::string& activemq::commands::BrokerInfo::getBrokerName () const`
[virtual]
- 6.132.2.8 `virtual std::string& activemq::commands::BrokerInfo::getBrokerUploadUrl ()`
[virtual]
- 6.132.2.9 `virtual const std::string& activemq::commands::BrokerInfo::getBrokerUploadUrl () const` [virtual]
- 6.132.2.10 `virtual std::string& activemq::commands::BrokerInfo::getBrokerURL ()`
[virtual]
- 6.132.2.11 `virtual const std::string& activemq::commands::BrokerInfo::getBrokerURL () const`
[virtual]
- 6.132.2.12 `virtual long long activemq::commands::BrokerInfo::getConnectionId () const` [virtual]
- 6.132.2.13 `virtual unsigned char activemq::commands::BrokerInfo::getDataStructureType () const` [virtual]

Get the unique identifier that this object and its own Marshaler share.

Returns:

new **DataStructure** (p. 1461) type copy.

Implements **activemq::commands::DataStructure** (p. 1464).

- 6.132.2.14 `virtual std::string& activemq::commands::BrokerInfo::getNetworkProperties ()`
[virtual]
- 6.132.2.15 `virtual const std::string& activemq::commands::BrokerInfo::getNetworkProperties ()`
`const` [virtual]
- 6.132.2.16 `virtual std::vector< decaf::lang::Pointer<BrokerInfo> >& activemq::commands::BrokerInfo::getPeerBrokerInfos ()` [virtual]
- 6.132.2.17 `virtual const std::vector< decaf::lang::Pointer<BrokerInfo> >& activemq::commands::BrokerInfo::getPeerBrokerInfos ()` `const`
[virtual]
- 6.132.2.18 `virtual bool activemq::commands::BrokerInfo::isBrokerInfo ()` `const`
[inline, virtual]

Returns:

an answer of true to the `isBrokerInfo()` (p. 779) query.

Reimplemented from `activemq::commands::BaseCommand` (p. 653).

- 6.132.2.19 virtual bool activemq::commands::BrokerInfo::isDuplexConnection () const [virtual]
- 6.132.2.20 virtual bool activemq::commands::BrokerInfo::isFaultTolerantConfiguration () const [virtual]
- 6.132.2.21 virtual bool activemq::commands::BrokerInfo::isMasterBroker () const [virtual]
- 6.132.2.22 virtual bool activemq::commands::BrokerInfo::isNetworkConnection () const [virtual]
- 6.132.2.23 virtual bool activemq::commands::BrokerInfo::isSlaveBroker () const [virtual]
- 6.132.2.24 BrokerInfo& activemq::commands::BrokerInfo::operator= (const BrokerInfo &) [inline, protected]
- 6.132.2.25 virtual void activemq::commands::BrokerInfo::setBrokerId (const Pointer< BrokerId > & *brokerId*) [virtual]
- 6.132.2.26 virtual void activemq::commands::BrokerInfo::setBrokerName (const std::string & *brokerName*) [virtual]
- 6.132.2.27 virtual void activemq::commands::BrokerInfo::setBrokerUploadUrl (const std::string & *brokerUploadUrl*) [virtual]
- 6.132.2.28 virtual void activemq::commands::BrokerInfo::setBrokerURL (const std::string & *brokerURL*) [virtual]
- 6.132.2.29 virtual void activemq::commands::BrokerInfo::setConnectionId (long long *connectionId*) [virtual]
- 6.132.2.30 virtual void activemq::commands::BrokerInfo::setDuplexConnection (bool *duplexConnection*) [virtual]
- 6.132.2.31 virtual void activemq::commands::BrokerInfo::setFaultTolerantConfiguration (bool *faultTolerantConfiguration*) [virtual]
- 6.132.2.32 virtual void activemq::commands::BrokerInfo::setMasterBroker (bool *masterBroker*) [virtual]
- 6.132.2.33 virtual void activemq::commands::BrokerInfo::setNetworkConnection (bool *networkConnection*) [virtual]
- 6.132.2.34 virtual void activemq::commands::BrokerInfo::setNetworkProperties (const std::string & *networkProperties*) [virtual]
- 6.132.2.35 virtual void activemq::commands::BrokerInfo::setPeerBrokerInfos (const std::vector< decaf::lang::Pointer< BrokerInfo > > & *peerBrokerInfos*) [virtual]
- 6.132.2.36 virtual void activemq::commands::BrokerInfo::setSlaveBroker (bool *slaveBroker*) [virtual]
- 6.132.2.37 virtual std::string activemq::commands::BrokerInfo::toString () const [virtual]

Returns a string containing the information for this **DataStructure** (p.1461) such as its type and value of its elements

Returns:

formatted string useful for debugging.

Reimplemented from **activemq::commands::BaseCommand** (p. 655).

6.132.2.38 `virtual Pointer<Command> activemq::commands::BrokerInfo::visit
(activemq::state::CommandVisitor * visitor) throw (
exceptions::ActiveMQException) [virtual]`

Allows a Visitor to visit this command and return a response to the command based on the command type being visited. The command will call the proper processXXX method in the visitor.

Returns:

a **Response** (p. 2781) to the visitor being called or NULL if no response.

Implements **activemq::commands::Command** (p. 1067).

6.132.3 Field Documentation

Write a object instance to data output stream.

6.133.1 Detailed Description

Marshaling code for Open Wire Format for **BrokerInfoMarshaller** (p. 783). NOTE!: This file is auto generated - do not modify! if you need to make a change, please see the Java Classes in the activemq-openwire-generator module

6.133.2 Constructor & Destructor Documentation

6.133.2.1 `activemq::wireformat::openwire::marshal::v3::BrokerInfoMarshaller::BrokerInfoMarshaller()` [inline]

6.133.2.2 `virtual activemq::wireformat::openwire::marshal::v3::BrokerInfoMarshaller::~~BrokerInfoMarshaller()` [inline, virtual]

6.133.3 Member Function Documentation

6.133.3.1 `virtual commands::DataStructure* activemq::wireformat::openwire::marshal::v3::BrokerInfoMarshaller::createObject() const` [virtual]

Creates a new instance of this marshalable type.

Returns:

new DataStructure object pointer caller owns it.

Implements `activemq::wireformat::openwire::marshal::DataStreamMarshaller` (p. 1419).

6.133.3.2 `virtual unsigned char activemq::wireformat::openwire::marshal::v3::BrokerInfoMarshaller::getDataStructureType() const` [virtual]

Get the Data Structure Type that identifies this Marshaler.

Returns:

byte holding the data structure type value

Implements `activemq::wireformat::openwire::marshal::DataStreamMarshaller` (p. 1424).

6.133.3.3 `virtual void activemq::wireformat::openwire::marshal::v3::BrokerInfoMarshaller::looseMarshal(OpenWireFormat * wireFormat, commands::DataStructure * dataStructure, decaf::io::DataOutputStream * dataOut) throw (decaf::io::IOException)` [virtual]

Write a object instance to data output stream.

Parameters:

wireFormat - describes the wire format of the broker

dataStructure - Object to be marshaled

dataOut - BinaryWriter that provides that data sink

Exceptions:

IOException if an error occurs during the marshal.

Reimplemented from `activemq::wireformat::openwire::marshal::v3::BaseCommandMarshaller` (p. 658).

6.133.3.4 `virtual void activemq::wireformat::openwire::marshal::v3::BrokerInfoMarshaller::looseUnmarshal (OpenWireFormat * wireFormat, commands::DataStructure * dataStructure, decaf::io::DataInputStream * dataIn) throw (decaf::io::IOException)` [virtual]

Un-marshall an object instance from the data input stream.

Parameters:

wireFormat - describes the wire format of the broker

dataStructure - Object to be marshaled

dataIn - BinaryReader that provides that data source

Exceptions:

IOException if an error occurs during the unmarshal.

Reimplemented from `activemq::wireformat::openwire::marshal::v3::BaseCommandMarshaller` (p. 659).

6.133.3.5 `virtual int activemq::wireformat::openwire::marshal::v3::BrokerInfoMarshaller::tightMarshal1 (OpenWireFormat * wireFormat, commands::DataStructure * dataStructure, utils::BooleanStream * bs) throw (decaf::io::IOException)` [virtual]

Write the booleans that this object uses to a BooleanStream.

Parameters:

wireFormat - describes the wire format of the broker

dataStructure - Object to be marshaled

bs - BooleanStream stream used to pack bits from the wire.

Returns:

int value indicating the size of the marshaled object.

Exceptions:

IOException if an error occurs during the marshal.

Reimplemented from `activemq::wireformat::openwire::marshal::v3::BaseCommandMarshaller` (p. 660).

6.133.3.6 virtual void activemq::wireformat::openwire::marshal::v3::BrokerInfoMarshaller::tightMarshal2 (OpenWireFormat * *wireFormat*, commands::DataStructure * *dataStructure*, decaf::io::DataOutputStream * *dataOut*, utils::BooleanStream * *bs*) throw (decaf::io::IOException) [virtual]

Write a object instance to data output stream.

Parameters:

wireFormat - describes the wire format of the broker
dataStructure - Object to be marshaled
dataOut - BinaryReader that provides that data sink
bs - BooleanStream stream used to pack bits from the wire.

Exceptions:

IOException if an error occurs during the marshal.

Reimplemented from **activemq::wireformat::openwire::marshal::v3::BaseCommandMarshaller** (p. 661).

6.133.3.7 virtual void activemq::wireformat::openwire::marshal::v3::BrokerInfoMarshaller::tightUnmarshal (OpenWireFormat * *wireFormat*, commands::DataStructure * *dataStructure*, decaf::io::DataInputStream * *dataIn*, utils::BooleanStream * *bs*) throw (decaf::io::IOException) [virtual]

Un-marshall an object instance from the data input stream.

Parameters:

wireFormat - describes the wire format of the broker.
dataStructure - Object to be un-marshaled.
dataIn - BinaryReader that provides that data.
bs - BooleanStream stream used to unpack bits from the wire.

Exceptions:

IOException if an error occurs during the unmarshal.

Reimplemented from **activemq::wireformat::openwire::marshal::v3::BaseCommandMarshaller** (p. 662).

The documentation for this class was generated from the following file:

Marshaling code for Open Wire Format for **BrokerInfoMarshaller** (p. 787). NOTE!: This file is auto generated - do not modify! if you need to make a change, please see the Java Classes in the activemq-openwire-generator module

6.134.2 Constructor & Destructor Documentation

6.134.2.1 `activemq::wireformat::openwire::marshal::v1::BrokerInfoMarshaller::BrokerInfoMarshaller()` [inline]

6.134.2.2 `virtual activemq::wireformat::openwire::marshal::v1::BrokerInfoMarshaller::~~BrokerInfoMarshaller()` [inline, virtual]

6.134.3 Member Function Documentation

6.134.3.1 `virtual commands::DataStructure* activemq::wireformat::openwire::marshal::v1::BrokerInfoMarshaller::createObject() const` [virtual]

Creates a new instance of this marshalable type.

Returns:

new DataStructure object pointer caller owns it.

Implements `activemq::wireformat::openwire::marshal::DataStreamMarshaller` (p. 1419).

6.134.3.2 `virtual unsigned char activemq::wireformat::openwire::marshal::v1::BrokerInfoMarshaller::getDataStructureType() const` [virtual]

Get the Data Structure Type that identifies this Marshaler.

Returns:

byte holding the data structure type value

Implements `activemq::wireformat::openwire::marshal::DataStreamMarshaller` (p. 1424).

6.134.3.3 `virtual void activemq::wireformat::openwire::marshal::v1::BrokerInfoMarshaller::looseMarshal(OpenWireFormat * wireFormat, commands::DataStructure * dataStructure, decaf::io::DataOutputStream * dataOut) throw (decaf::io::IOException)` [virtual]

Write a object instance to data output stream.

Parameters:

wireFormat - describes the wire format of the broker

dataStructure - Object to be marshaled

dataOut - BinaryWriter that provides that data sink

Exceptions:

IOException if an error occurs during the marshal.

Reimplemented from `activemq::wireformat::openwire::marshal::v1::BaseCommandMarshaller` (p. 665).

6.134.3.4 `virtual void activemq::wireformat::openwire::marshal::v1::BrokerInfoMarshaller::looseUnmarshal (OpenWireFormat * wireFormat, commands::DataStructure * dataStructure, decaf::io::DataInputStream * dataIn) throw (decaf::io::IOException)` [virtual]

Un-marshall an object instance from the data input stream.

Parameters:

wireFormat - describes the wire format of the broker

dataStructure - Object to be marshaled

dataIn - BinaryReader that provides that data source

Exceptions:

IOException if an error occurs during the unmarshal.

Reimplemented from `activemq::wireformat::openwire::marshal::v1::BaseCommandMarshaller` (p. 666).

6.134.3.5 `virtual int activemq::wireformat::openwire::marshal::v1::BrokerInfoMarshaller::tightMarshal1 (OpenWireFormat * wireFormat, commands::DataStructure * dataStructure, utils::BooleanStream * bs) throw (decaf::io::IOException)` [virtual]

Write the booleans that this object uses to a BooleanStream.

Parameters:

wireFormat - describes the wire format of the broker

dataStructure - Object to be marshaled

bs - BooleanStream stream used to pack bits from the wire.

Returns:

int value indicating the size of the marshaled object.

Exceptions:

IOException if an error occurs during the marshal.

Reimplemented from `activemq::wireformat::openwire::marshal::v1::BaseCommandMarshaller` (p. 667).

6.134.3.6 virtual void activemq::wireformat::openwire::marshal::v1::BrokerInfoMarshaller::tightMarshal2 (OpenWireFormat * *wireFormat*, commands::DataStructure * *dataStructure*, decaf::io::DataOutputStream * *dataOut*, utils::BooleanStream * *bs*) throw (decaf::io::IOException) [virtual]

Write a object instance to data output stream.

Parameters:

wireFormat - describes the wire format of the broker
dataStructure - Object to be marshaled
dataOut - BinaryReader that provides that data sink
bs - BooleanStream stream used to pack bits from the wire.

Exceptions:

IOException if an error occurs during the marshal.

Reimplemented from **activemq::wireformat::openwire::marshal::v1::BaseCommandMarshaller** (p. 668).

6.134.3.7 virtual void activemq::wireformat::openwire::marshal::v1::BrokerInfoMarshaller::tightUnmarshal (OpenWireFormat * *wireFormat*, commands::DataStructure * *dataStructure*, decaf::io::DataInputStream * *dataIn*, utils::BooleanStream * *bs*) throw (decaf::io::IOException) [virtual]

Un-marshall an object instance from the data input stream.

Parameters:

wireFormat - describes the wire format of the broker.
dataStructure - Object to be un-marshaled.
dataIn - BinaryReader that provides that data.
bs - BooleanStream stream used to unpack bits from the wire.

Exceptions:

IOException if an error occurs during the unmarshal.

Reimplemented from **activemq::wireformat::openwire::marshal::v1::BaseCommandMarshaller** (p. 669).

6.135.1 Detailed Description

Marshaling code for Open Wire Format for **BrokerInfoMarshaller** (p. 791). NOTE!: This file is auto generated - do not modify! if you need to make a change, please see the Java Classes in the activemq-openwire-generator module

6.135.2 Constructor & Destructor Documentation

6.135.2.1 `activemq::wireformat::openwire::marshal::v4::BrokerInfoMarshaller::BrokerInfoMarshaller()` [inline]

6.135.2.2 `virtual activemq::wireformat::openwire::marshal::v4::BrokerInfoMarshaller::~~BrokerInfoMarshaller()` [inline, virtual]

6.135.3 Member Function Documentation

6.135.3.1 `virtual commands::DataStructure* activemq::wireformat::openwire::marshal::v4::BrokerInfoMarshaller::createObject() const` [virtual]

Creates a new instance of this marshalable type.

Returns:

new DataStructure object pointer caller owns it.

Implements `activemq::wireformat::openwire::marshal::DataStreamMarshaller` (p. 1419).

6.135.3.2 `virtual unsigned char activemq::wireformat::openwire::marshal::v4::BrokerInfoMarshaller::getDataStructureType() const` [virtual]

Get the Data Structure Type that identifies this Marshaler.

Returns:

byte holding the data structure type value

Implements `activemq::wireformat::openwire::marshal::DataStreamMarshaller` (p. 1424).

6.135.3.3 `virtual void activemq::wireformat::openwire::marshal::v4::BrokerInfoMarshaller::looseMarshal(OpenWireFormat * wireFormat, commands::DataStructure * dataStructure, decaf::io::DataOutputStream * dataOut) throw (decaf::io::IOException)` [virtual]

Write a object instance to data output stream.

Parameters:

wireFormat - describes the wire format of the broker

dataStructure - Object to be marshaled

dataOut - BinaryWriter that provides that data sink

Exceptions:

IOException if an error occurs during the marshal.

Reimplemented from `activemq::wireformat::openwire::marshal::v4::BaseCommandMarshaller` (p. 672).

```
6.135.3.4 virtual void ac-
tivemq::wireformat::openwire::marshal::v4::BrokerInfoMarshaller::looseUnmarshal
(OpenWireFormat * wireFormat, commands::DataStructure
* dataStructure, decaf::io::DataInputStream * dataIn) throw (
decaf::io::IOException ) [virtual]
```

Un-marshal an object instance from the data input stream.

Parameters:

wireFormat - describes the wire format of the broker

dataStructure - Object to be marshaled

dataIn - BinaryReader that provides that data source

Exceptions:

IOException if an error occurs during the unmarshal.

Reimplemented from `activemq::wireformat::openwire::marshal::v4::BaseCommandMarshaller` (p. 673).

```
6.135.3.5 virtual int ac-
tivemq::wireformat::openwire::marshal::v4::BrokerInfoMarshaller::tightMarshal1
(OpenWireFormat * wireFormat, commands::DataStructure *
dataStructure, utils::BooleanStream * bs) throw ( decaf::io::IOException
) [virtual]
```

Write the booleans that this object uses to a BooleanStream.

Parameters:

wireFormat - describes the wire format of the broker

dataStructure - Object to be marshaled

bs - BooleanStream stream used to pack bits from the wire.

Returns:

int value indicating the size of the marshaled object.

Exceptions:

IOException if an error occurs during the marshal.

Reimplemented from `activemq::wireformat::openwire::marshal::v4::BaseCommandMarshaller` (p. 674).

6.135.3.6 virtual void activemq::wireformat::openwire::marshal::v4::BrokerInfoMarshaller::tightMarshal2 (OpenWireFormat * *wireFormat*, commands::DataStructure * *dataStructure*, decaf::io::DataOutputStream * *dataOut*, utils::BooleanStream * *bs*) throw (decaf::io::IOException) [virtual]

Write a object instance to data output stream.

Parameters:

wireFormat - describes the wire format of the broker
dataStructure - Object to be marshaled
dataOut - BinaryReader that provides that data sink
bs - BooleanStream stream used to pack bits from the wire.

Exceptions:

IOException if an error occurs during the marshal.

Reimplemented from **activemq::wireformat::openwire::marshal::v4::BaseCommandMarshaller** (p. 675).

6.135.3.7 virtual void activemq::wireformat::openwire::marshal::v4::BrokerInfoMarshaller::tightUnmarshal (OpenWireFormat * *wireFormat*, commands::DataStructure * *dataStructure*, decaf::io::DataInputStream * *dataIn*, utils::BooleanStream * *bs*) throw (decaf::io::IOException) [virtual]

Un-marshal an object instance from the data input stream.

Parameters:

wireFormat - describes the wire format of the broker.
dataStructure - Object to be un-marshaled.
dataIn - BinaryReader that provides that data.
bs - BooleanStream stream used to unpack bits from the wire.

Exceptions:

IOException if an error occurs during the unmarshal.

Reimplemented from **activemq::wireformat::openwire::marshal::v4::BaseCommandMarshaller** (p. 676).

6.136.3 Member Function Documentation

6.136.3.1 `virtual commands::DataStructure* activemq::wireformat::openwire::marshal::v5::BrokerInfoMarshaller::createObject() const` [virtual]

Creates a new instance of this marshalable type.

Returns:

new DataStructure object pointer caller owns it.

Implements `activemq::wireformat::openwire::marshal::DataStreamMarshaller` (p. 1419).

6.136.3.2 `virtual unsigned char activemq::wireformat::openwire::marshal::v5::BrokerInfoMarshaller::getDataStructureType() const` [virtual]

Get the Data Structure Type that identifies this Marshaler.

Returns:

byte holding the data structure type value

Implements `activemq::wireformat::openwire::marshal::DataStreamMarshaller` (p. 1424).

6.136.3.3 `virtual void activemq::wireformat::openwire::marshal::v5::BrokerInfoMarshaller::looseMarshal(OpenWireFormat * wireFormat, commands::DataStructure * dataStructure, decaf::io::DataOutputStream * dataOut) throw (decaf::io::IOException)` [virtual]

Write a object instance to data output stream.

Parameters:

wireFormat - describes the wire format of the broker

dataStructure - Object to be marshaled

dataOut - BinaryWriter that provides that data sink

Exceptions:

IOException if an error occurs during the marshal.

Reimplemented from `activemq::wireformat::openwire::marshal::v5::BaseCommandMarshaller` (p. 679).

6.136.3.4 `virtual void activemq::wireformat::openwire::marshal::v5::BrokerInfoMarshaller::looseUnmarshal (OpenWireFormat * wireFormat, commands::DataStructure * dataStructure, decaf::io::DataInputStream * dataIn) throw (decaf::io::IOException)` [virtual]

Un-marshal an object instance from the data input stream.

Parameters:

wireFormat - describes the wire format of the broker

dataStructure - Object to be marshaled

dataIn - BinaryReader that provides that data source

Exceptions:

IOException if an error occurs during the unmarshal.

Reimplemented from `activemq::wireformat::openwire::marshal::v5::BaseCommandMarshaller` (p. 680).

6.136.3.5 `virtual int activemq::wireformat::openwire::marshal::v5::BrokerInfoMarshaller::tightMarshal1 (OpenWireFormat * wireFormat, commands::DataStructure * dataStructure, utils::BooleanStream * bs) throw (decaf::io::IOException)` [virtual]

Write the booleans that this object uses to a BooleanStream.

Parameters:

wireFormat - describes the wire format of the broker

dataStructure - Object to be marshaled

bs - BooleanStream stream used to pack bits from the wire.

Returns:

int value indicating the size of the marshaled object.

Exceptions:

IOException if an error occurs during the marshal.

Reimplemented from `activemq::wireformat::openwire::marshal::v5::BaseCommandMarshaller` (p. 681).

6.136.3.6 virtual void activemq::wireformat::openwire::marshal::v5::BrokerInfoMarshaller::tightMarshal2 (OpenWireFormat * *wireFormat*, commands::DataStructure * *dataStructure*, decaf::io::DataOutputStream * *dataOut*, utils::BooleanStream * *bs*) throw (decaf::io::IOException) [virtual]

Write a object instance to data output stream.

Parameters:

wireFormat - describes the wire format of the broker
dataStructure - Object to be marshaled
dataOut - BinaryReader that provides that data sink
bs - BooleanStream stream used to pack bits from the wire.

Exceptions:

IOException if an error occurs during the marshal.

Reimplemented from **activemq::wireformat::openwire::marshal::v5::BaseCommandMarshaller** (p. 682).

6.136.3.7 virtual void activemq::wireformat::openwire::marshal::v5::BrokerInfoMarshaller::tightUnmarshal (OpenWireFormat * *wireFormat*, commands::DataStructure * *dataStructure*, decaf::io::DataInputStream * *dataIn*, utils::BooleanStream * *bs*) throw (decaf::io::IOException) [virtual]

Un-marshall an object instance from the data input stream.

Parameters:

wireFormat - describes the wire format of the broker.
dataStructure - Object to be un-marshaled.
dataIn - BinaryReader that provides that data.
bs - BooleanStream stream used to unpack bits from the wire.

Exceptions:

IOException if an error occurs during the unmarshal.

Reimplemented from **activemq::wireformat::openwire::marshal::v5::BaseCommandMarshaller** (p. 683).

6.137.1 Detailed Description

Marshaling code for Open Wire Format for **BrokerInfoMarshaller** (p. 799). NOTE!: This file is auto generated - do not modify! if you need to make a change, please see the Java Classes in the activemq-openwire-generator module

6.137.2 Constructor & Destructor Documentation

6.137.2.1 `activemq::wireformat::openwire::marshal::v2::BrokerInfoMarshaller::BrokerInfoMarshaller()` [inline]

6.137.2.2 `virtual activemq::wireformat::openwire::marshal::v2::BrokerInfoMarshaller::~~BrokerInfoMarshaller()` [inline, virtual]

6.137.3 Member Function Documentation

6.137.3.1 `virtual commands::DataStructure* activemq::wireformat::openwire::marshal::v2::BrokerInfoMarshaller::createObject() const` [virtual]

Creates a new instance of this marshalable type.

Returns:

new DataStructure object pointer caller owns it.

Implements `activemq::wireformat::openwire::marshal::DataStreamMarshaller` (p. 1419).

6.137.3.2 `virtual unsigned char activemq::wireformat::openwire::marshal::v2::BrokerInfoMarshaller::getDataStructureType() const` [virtual]

Get the Data Structure Type that identifies this Marshaler.

Returns:

byte holding the data structure type value

Implements `activemq::wireformat::openwire::marshal::DataStreamMarshaller` (p. 1424).

6.137.3.3 `virtual void activemq::wireformat::openwire::marshal::v2::BrokerInfoMarshaller::looseMarshal(OpenWireFormat * wireFormat, commands::DataStructure * dataStructure, decaf::io::DataOutputStream * dataOut) throw (decaf::io::IOException)` [virtual]

Write a object instance to data output stream.

Parameters:

wireFormat - describes the wire format of the broker

dataStructure - Object to be marshaled

dataOut - BinaryWriter that provides that data sink

Exceptions:

IOException if an error occurs during the marshal.

Reimplemented from `activemq::wireformat::openwire::marshal::v2::BaseCommandMarshaller` (p. 686).

6.137.3.4 `virtual void activemq::wireformat::openwire::marshal::v2::BrokerInfoMarshaller::looseUnmarshal (OpenWireFormat * wireFormat, commands::DataStructure * dataStructure, decaf::io::DataInputStream * dataIn) throw (decaf::io::IOException)` [virtual]

Un-marshal an object instance from the data input stream.

Parameters:

wireFormat - describes the wire format of the broker

dataStructure - Object to be marshaled

dataIn - BinaryReader that provides that data source

Exceptions:

IOException if an error occurs during the unmarshal.

Reimplemented from `activemq::wireformat::openwire::marshal::v2::BaseCommandMarshaller` (p. 687).

6.137.3.5 `virtual int activemq::wireformat::openwire::marshal::v2::BrokerInfoMarshaller::tightMarshal1 (OpenWireFormat * wireFormat, commands::DataStructure * dataStructure, utils::BooleanStream * bs) throw (decaf::io::IOException)` [virtual]

Write the booleans that this object uses to a BooleanStream.

Parameters:

wireFormat - describes the wire format of the broker

dataStructure - Object to be marshaled

bs - BooleanStream stream used to pack bits from the wire.

Returns:

int value indicating the size of the marshaled object.

Exceptions:

IOException if an error occurs during the marshal.

Reimplemented from `activemq::wireformat::openwire::marshal::v2::BaseCommandMarshaller` (p. 688).

6.137.3.6 virtual void activemq::wireformat::openwire::marshal::v2::BrokerInfoMarshaller::tightMarshal2 (OpenWireFormat * *wireFormat*, commands::DataStructure * *dataStructure*, decaf::io::DataOutputStream * *dataOut*, utils::BooleanStream * *bs*) throw (decaf::io::IOException) [virtual]

Write a object instance to data output stream.

Parameters:

wireFormat - describes the wire format of the broker
dataStructure - Object to be marshaled
dataOut - BinaryReader that provides that data sink
bs - BooleanStream stream used to pack bits from the wire.

Exceptions:

IOException if an error occurs during the marshal.

Reimplemented from **activemq::wireformat::openwire::marshal::v2::BaseCommandMarshaller** (p. 689).

6.137.3.7 virtual void activemq::wireformat::openwire::marshal::v2::BrokerInfoMarshaller::tightUnmarshal (OpenWireFormat * *wireFormat*, commands::DataStructure * *dataStructure*, decaf::io::DataInputStream * *dataIn*, utils::BooleanStream * *bs*) throw (decaf::io::IOException) [virtual]

Un-marshal an object instance from the data input stream.

Parameters:

wireFormat - describes the wire format of the broker.
dataStructure - Object to be un-marshaled.
dataIn - BinaryReader that provides that data.
bs - BooleanStream stream used to unpack bits from the wire.

Exceptions:

IOException if an error occurs during the unmarshal.

Reimplemented from **activemq::wireformat::openwire::marshal::v2::BaseCommandMarshaller** (p. 690).

The documentation for this class was generated from the following file:

- src/main/activemq/wireformat/openwire/marshal/v2/**BrokerInfoMarshaller.h**

- `bool __markSet`

6.138.1 Detailed Description

A container for data of a specific primitive type. A buffer is a linear, finite sequence of elements of a specific primitive type. Aside from its content, the essential properties of a buffer are its capacity, limit, and position:

A buffer's capacity is the number of elements it contains. The capacity of a buffer is never negative and never changes.

A buffer's limit is the index of the first element that should not be read or written. A buffer's limit is never negative and is never greater than its capacity.

A buffer's position is the index of the next element to be read or written. A buffer's position is never negative and is never greater than its limit.

There is one subclass of this class for each non-boolean primitive type.

Transferring data: Each subclass of this class defines two categories of get and put operations: * Relative operations read or write one or more elements starting at the current position and then increment the position by the number of elements transferred. If the requested transfer exceeds the limit then a relative get operation throws a **BufferUnderflowException** (p.837) and a relative put operation throws a **BufferOverflowException** (p.834); in either case, no data is transferred. * Absolute operations take an explicit element index and do not affect the position. Absolute get and put operations throw an **IndexOutOfBoundsException** if the index argument exceeds the limit.

Data may also, of course, be transferred in to or out of a buffer by the I/O operations of an appropriate channel, which are always relative to the current position.

Marking and resetting:

A buffer's mark is the index to which its position will be reset when the reset method is invoked. The mark is not always defined, but when it is defined it is never negative and is never greater than the position. If the mark is defined then it is discarded when the position or the limit is adjusted to a value smaller than the mark. If the mark is not defined then invoking the reset method causes an **InvalidMarkException** (p.1813) to be thrown.

Invariants:

The following invariant holds for the mark, position, limit, and capacity values: $0 \leq \text{mark} \leq \text{position} \leq \text{limit} \leq \text{capacity}$

A newly-created buffer always has a position of zero and a mark that is undefined. The initial limit may be zero, or it may be some other value that depends upon the type of the buffer and the manner in which it is constructed. The initial content of a buffer is, in general, undefined.

Clearing, flipping, and rewinding:

In addition to methods for accessing the position, limit, and capacity values and for marking and resetting, this class also defines the following operations upon buffers:

clear() (p. 805) makes a buffer ready for a new sequence of channel-read or relative put operations: It sets the limit to the capacity and the position to zero.

flip() (p. 806) makes a buffer ready for a new sequence of channel-write or relative get operations: It sets the limit to the current position and then sets the position to zero.

rewind() (p. 808) makes a buffer ready for re-reading the data that it already contains: It leaves the limit unchanged and sets the position to zero.

Read-only buffers:

Every buffer is readable, but not every buffer is writable. The mutation methods of each buffer class are specified as optional operations that will throw a **ReadOnlyBufferException** (p. 2685) when invoked upon a read-only buffer. A read-only buffer does not allow its content to be changed, but its mark, position, and limit values are mutable. Whether or not a buffer is read-only may be determined by invoking its `isReadOnly` method.

Thread safety:

Buffers are not safe for use by multiple concurrent threads. If a buffer is to be used by more than one thread then access to the buffer should be controlled by appropriate synchronization.

Invocation chaining:

Methods in this class that do not otherwise have a value to return are specified to return the buffer upon which they are invoked. This allows method invocations to be chained; for example, the sequence of statements

```
b.flip(); b.position(23); b.limit(42);
```

can be replaced by the single, more compact statement `b.flip().position(23).limit(42);`

6.138.2 Constructor & Destructor Documentation

6.138.2.1 `decaf::nio::Buffer::Buffer (std::size_t capacity)`

6.138.2.2 `decaf::nio::Buffer::Buffer (const Buffer & other)`

6.138.2.3 `virtual decaf::nio::Buffer::~~Buffer ()` [inline, virtual]

6.138.3 Member Function Documentation

6.138.3.1 `virtual std::size_t decaf::nio::Buffer::capacity () const` [inline, virtual]

Returns:

this buffer's capacity.

6.138.3.2 `virtual Buffer& decaf::nio::Buffer::clear ()` [virtual]

Clears this buffer. The position is set to zero, the limit is set to the capacity, and the mark is discarded.

Invoke this method before using a sequence of channel-read or put operations to fill this buffer. For example:

```
buf.clear(); // Prepare buffer for reading in.read(buf); // Read data
```

This method does not actually erase the data in the buffer, but it is named as if it did because it will most often be used in situations in which that might as well be the case.

Returns:

a reference to this buffer.

6.138.3.3 virtual Buffer& decaf::nio::Buffer::flip () [virtual]

Flips this buffer. The limit is set to the current position and then the position is set to zero. If the mark is defined then it is discarded.

After a sequence of channel-read or put operations, invoke this method to prepare for a sequence of channel-write or relative get operations. For example:

```
buf.put(magic); // Prepend header
in.read(buf); // Read data into rest of buffer
buf.flip(); // Flip buffer
out.write(buf); // Write header + data to channel
```

This method is often used in conjunction with the compact method when transferring data from one place to another.

Returns:

a reference to this buffer.

6.138.3.4 virtual bool decaf::nio::Buffer::hasRemaining () const [inline, virtual]

Tells whether there are any elements between the current position and the limit.

Returns:

true if, and only if, there is at least one element remaining in this buffer

6.138.3.5 virtual bool decaf::nio::Buffer::isReadOnly () const [pure virtual]

Tells whether or not this buffer is read-only.

Returns:

true if, and only if, this buffer is read-only

Implemented in `decaf::internal::nio::ByteArrayBuffer` (p. 884), `decaf::internal::nio::CharArrayBuffer` (p. 995), `decaf::internal::nio::DoubleArrayBuffer` (p. 1553), `decaf::internal::nio::FloatArrayBuffer` (p. 1663), `decaf::internal::nio::IntArrayBuffer` (p. 1749), `decaf::internal::nio::LongArrayBuffer` (p. 2076), `decaf::internal::nio::ShortArrayBuffer` (p. 2920), and `decaf::nio::ByteBuffer` (p. 928).

6.138.3.6 virtual Buffer& decaf::nio::Buffer::limit (std::size_t newLimit) throw (lang::exceptions::IllegalArgumentException) [virtual]

Sets this buffer's limit. If the position is larger than the new limit then it is set to the new limit. If the mark is defined and larger than the new limit then it is discarded.

Parameters:

newLimit - The new limit value; must be no larger than this buffer's capacity

Returns:

A reference to This buffer

Exceptions:

IllegalArgumentException if preconditions on the new pos don't hold.

6.138.3.7 virtual std::size_t decaf::nio::Buffer::limit () const [inline, virtual]

Returns:

this buffers Limit

6.138.3.8 virtual Buffer& decaf::nio::Buffer::mark () [virtual]

Sets this buffer's mark at its position.

Returns:

a reference to this buffer.

6.138.3.9 virtual Buffer& decaf::nio::Buffer::position (std::size_t *newPosition*)
throw (lang::exceptions::IllegalArgumentException) [virtual]

Sets this buffer's position. If the mark is defined and larger than the new position then it is discarded.

Parameters:

newPosition - the new postion in the buffer to set.

Returns:

A reference to This buffer

Exceptions:

IllegalArgumentException if preconditions on the new pos don't hold.

6.138.3.10 virtual std::size_t decaf::nio::Buffer::position () const [inline, virtual]

Returns:

the current position in the buffer

6.138.3.11 `virtual std::size_t decaf::nio::Buffer::remaining () const [inline, virtual]`

Returns the number of elements between the current position and the limit.

Returns:

The number of elements remaining in this buffer

6.138.3.12 `virtual Buffer& decaf::nio::Buffer::reset () throw (InvalidMarkException) [virtual]`

Resets this buffer's position to the previously-marked position.

Returns:

a reference to this buffer.

Exceptions:

InvalidMarkException (p. 1813) - If the mark has not been set

6.138.3.13 `virtual Buffer& decaf::nio::Buffer::rewind () [virtual]`

Rewinds this buffer. The position is set to zero and the mark is discarded.

Invoke this method before a sequence of channel-write or get operations, assuming that the limit has already been set appropriately. For example:

```
out.write(buf); // Write remaining data buf.rewind(); // Rewind buffer buf.get(array); // Copy data into array
```

Returns:

a reference to this buffer.

6.138.4 Field Documentation

6.138.4.1 `std::size_t decaf::nio::Buffer::_capacity [protected]`

6.138.4.2 `std::size_t decaf::nio::Buffer::_limit [protected]`

6.138.4.3 `std::size_t decaf::nio::Buffer::_mark [protected]`

6.138.4.4 `bool decaf::nio::Buffer::_markSet [protected]`

6.138.4.5 `std::size_t decaf::nio::Buffer::_position [mutable, protected]`

The documentation for this class was generated from the following file:

- `src/main/decaf/nio/Buffer.h`

6.139 decaf::io::BufferedInputStream Class Reference

A wrapper around another input stream that performs a buffered read, where it reads more data than it needs in order to reduce the number of io operations on the input stream.

#include <src/main/decaf/io/BufferedInputStream.h> Inheritance diagram for decaf::io::BufferedInputStream:

Public Member Functions

- **BufferedInputStream** (**InputStream** *stream, bool **own**=false)
Constructor.
- **BufferedInputStream** (**InputStream** *stream, std::size_t bufferSize, bool **own**=false) throw (lang::exceptions::IllegalArgumentException)
Constructor.
- virtual ~**BufferedInputStream** ()
- virtual std::size_t **available** () const throw (IOException)
Indicates the number of bytes available.
- virtual void **close** () throw (IOException)
*Close this **BufferedInputStream** (p. 809).*
- virtual int **read** () throw (IOException)
Reads a single byte from the buffer.
- virtual int **read** (unsigned char *buffer, std::size_t offset, std::size_t bufferSize) throw (IOException, lang::exceptions::NullPointerException)
Reads an array of bytes from the buffer.
- virtual std::size_t **skip** (std::size_t num) throw (io::IOException, lang::exceptions::UnsupportedOperationException)
Skips over and discards n bytes of data from this input stream.
- virtual void **mark** (int readLimit)
Marks the current position in the stream A subsequent call to the reset method repositions this stream at the last marked position so that subsequent reads re-read the same bytes.
- virtual void **reset** () throw (IOException)
Repositions this stream to the position at the time the mark method was last called on this input stream.
- virtual bool **markSupported** () const
Determines if this input stream supports the mark and reset methods.

6.139.1 Detailed Description

A wrapper around another input stream that performs a buffered read, where it reads more data than it needs in order to reduce the number of io operations on the input stream.

6.139.2 Constructor & Destructor Documentation

6.139.2.1 `decaf::io::BufferedInputStream::BufferedInputStream (InputStream * stream, bool own = false)`

Constructor.

Parameters:

stream The target input stream.

own indicates if we own the stream object, defaults to false

6.139.2.2 `decaf::io::BufferedInputStream::BufferedInputStream (InputStream * stream, std::size_t bufferSize, bool own = false) throw (lang::exceptions::IllegalArgumentException)`

Constructor.

Parameters:

stream the target input stream

bufferSize the size for the internal buffer.

own indicates if we own the stream object, defaults to false.

Exceptions:

IllegalArgumentException is the size is zero.

6.139.2.3 `virtual decaf::io::BufferedInputStream::~~BufferedInputStream ()` [virtual]

6.139.3 Member Function Documentation

6.139.3.1 `virtual std::size_t decaf::io::BufferedInputStream::available () const` `throw (IOException)` [inline, virtual]

Indicates the number of bytes available.

Returns:

the sum of the amount of data available in the buffer and the data available on the target input stream.

Reimplemented from `decaf::io::FilterInputStream` (p.1633).

6.139.3.2 virtual void decaf::io::BufferedInputStream::close () throw (IOException) [virtual]

Close this **BufferedInputStream** (p. 809). This implementation closes the target stream and releases any resources associated with it.

Exceptions:

IOException (p. 1820) If an error occurs attempting to close this stream.

Reimplemented from **decaf::io::FilterInputStream** (p. 1633).

6.139.3.3 virtual void decaf::io::BufferedInputStream::mark (int readLimit) [inline, virtual]

Marks the current position in the stream. A subsequent call to the reset method repositions this stream at the last marked position so that subsequent reads re-read the same bytes. If a stream instance reports that marks are supported then the stream will ensure that the same bytes can be read again after the reset method is called so long the readLimit is not reached.

Parameters:

readLimit max bytes read before marked position is invalid.

Reimplemented from **decaf::io::FilterInputStream** (p. 1634).

6.139.3.4 virtual bool decaf::io::BufferedInputStream::markSupported () const [inline, virtual]

Determines if this input stream supports the mark and reset methods. Whether or not mark and reset are supported is an invariant property of a particular input stream instance.

Returns:

true if this stream instance supports marks

Reimplemented from **decaf::io::FilterInputStream** (p. 1634).

6.139.3.5 virtual int decaf::io::BufferedInputStream::read (unsigned char * buffer, std::size_t offset, std::size_t bufferSize) throw (IOException, lang::exceptions::NullPointerException) [virtual]

Reads an array of bytes from the buffer. Blocks until the requested number of bytes are available.

Parameters:

buffer (out) the target buffer.

offset the position in the buffer to start reading from.

bufferSize the size of the output buffer.

Returns:

The number of bytes read or -1 if EOF

Exceptions:

IOException (p. 1820) thrown if an error occurs.

NullPointerException if buffer is NULL

Reimplemented from **decaf::io::FilterInputStream** (p.1635).

6.139.3.6 `virtual int decaf::io::BufferedInputStream::read () throw (IOException)`
[virtual]

Reads a single byte from the buffer. Blocks until the data is available.

Returns:

The next byte.

Exceptions:

IOException (p. 1820) thrown if an error occurs.

Reimplemented from **decaf::io::FilterInputStream** (p.1636).

6.139.3.7 `virtual void decaf::io::BufferedInputStream::reset () throw (IOException)`
[inline, virtual]

Repositions this stream to the position at the time the mark method was last called on this input stream. If the method markSupported returns true, then: * If the method mark has not been called since the stream was created, or the number of bytes read from the stream since mark was last called is larger than the argument to mark at that last call, then an **IOException** (p.1820) might be thrown. * If such an **IOException** (p.1820) is not thrown, then the stream is reset to a state such that all the bytes read since the most recent call to mark (or since the start of the file, if mark has not been called) will be resupplied to subsequent callers of the read method, followed by any bytes that otherwise would have been the next input data as of the time of the call to reset. If the method markSupported returns false, then: * The call to reset may throw an **IOException** (p.1820). * If an **IOException** (p.1820) is not thrown, then the stream is reset to a fixed state that depends on the particular type of the input stream and how it was created. The bytes that will be supplied to subsequent callers of the read method depend on the particular type of the input stream.

Exceptions:

IOException (p. 1820)

Reimplemented from **decaf::io::FilterInputStream** (p.1636).

6.139.3.8 `virtual std::size_t decaf::io::BufferedInputStream::skip`
(std::size_t *num*) throw (io::IOException,
lang::exceptions::UnsupportedOperationException)
[virtual]

Skips over and discards n bytes of data from this input stream. The skip method may, for a variety of reasons, end up skipping over some smaller number of bytes, possibly 0. This may result from

any of a number of conditions; reaching end of file before *n* bytes have been skipped is only one possibility. The actual number of bytes skipped is returned. If *n* is negative, no bytes are skipped.

The skip method of **InputStream** (p. 1740) creates a byte array and then repeatedly reads into it until *n* bytes have been read or the end of the stream has been reached. Subclasses are encouraged to provide a more efficient implementation of this method.

Parameters:

num - the number of bytes to skip

Returns:

total bytes skipped

Exceptions:

IOException (p. 1820) if an error occurs

Reimplemented from **decaf::io::FilterInputStream** (p. 1637).

The documentation for this class was generated from the following file:

- src/main/decaf/io/**BufferedInputStream.h**

6.140 decaf::io::BufferedOutputStream Class Reference

Wrapper around another output stream that buffers output before writing to the target output stream.

#include <src/main/decaf/io/BufferedOutputStream.h> Inheritance diagram for decaf::io::BufferedOutputStream:

Public Member Functions

- **BufferedOutputStream** (**OutputStream** *stream, bool **own**=false)
Constructor.
- **BufferedOutputStream** (**OutputStream** *stream, std::size_t bufferSize, bool **own**=false) throw (lang::exceptions::IllegalArgumentException)
Constructor.
- virtual ~**BufferedOutputStream** ()
- virtual void **write** (unsigned char c) throw (IOException)
Writes a single byte to the output stream.
- virtual void **write** (const std::vector< unsigned char > &buffer) throw (IOException)
Writes an array of bytes to the output stream.
- virtual void **write** (const unsigned char *buffer, std::size_t offset, std::size_t len) throw (IOException, lang::exceptions::NullPointerException)
Writes an array of bytes to the output stream.
- virtual void **flush** () throw (IOException)
Invokes flush on the target output stream.
- void **close** () throw (io::IOException)
Invokes close on the target output stream.

6.140.1 Detailed Description

Wrapper around another output stream that buffers output before writing to the target output stream.

6.140.2 Constructor & Destructor Documentation

6.140.2.1 decaf::io::BufferedOutputStream::BufferedOutputStream (OutputStream * stream, bool own = false)

Constructor.

Parameters:

- stream* The target output stream.
- own* Indicates if this class owns the stream pointer.

6.140.2.2 `decaf::io::BufferedOutputStream::BufferedOutputStream (OutputStream * stream, std::size_t bufferSize, bool own = false) throw (lang::exceptions::IllegalArgumentException)`

Constructor.

Parameters:

- stream* The target output stream.
- bufferSize* The size for the internal buffer.
- own* Indicates if this class owns the stream pointer.

6.140.2.3 `virtual decaf::io::BufferedOutputStream::~~BufferedOutputStream () [virtual]`

6.140.3 Member Function Documentation

6.140.3.1 `void decaf::io::BufferedOutputStream::close () throw (io::IOException) [virtual]`

Invokes close on the target output stream.

Exceptions:

IOException (p. 1820) thrown if an error occurs.

Reimplemented from `decaf::io::FilterOutputStream` (p. 1642).

6.140.3.2 `virtual void decaf::io::BufferedOutputStream::flush () throw (IOException) [virtual]`

Invokes flush on the target output stream.

Exceptions:

IOException (p. 1820) thrown if an error occurs.

Reimplemented from `decaf::io::FilterOutputStream` (p. 1642).

6.140.3.3 `virtual void decaf::io::BufferedOutputStream::write (const unsigned char * buffer, std::size_t offset, std::size_t len) throw (IOException, lang::exceptions::NullPointerException) [virtual]`

Writes an array of bytes to the output stream.

Parameters:

- buffer* The array of bytes to write.

offset the position to start writing in buffer.

len The number of bytes from the buffer to be written.

Exceptions:

IOException (p. 1820) thrown if an error occurs.

NullPointerException thrown if buffer is Null.

Reimplemented from **decaf::io::FilterOutputStream** (p. 1645).

6.140.3.4 `virtual void decaf::io::BufferedOutputStream::write (const std::vector< unsigned char > & buffer) throw (IOException) [virtual]`

Writes an array of bytes to the output stream.

Parameters:

buffer The bytes to write.

Exceptions:

IOException (p. 1820) thrown if an error occurs.

Reimplemented from **decaf::io::FilterOutputStream** (p. 1646).

6.140.3.5 `virtual void decaf::io::BufferedOutputStream::write (unsigned char c) throw (IOException) [virtual]`

Writes a single byte to the output stream.

Parameters:

c the byte.

Exceptions:

IOException (p. 1820) thrown if an error occurs.

Reimplemented from **decaf::io::FilterOutputStream** (p. 1646).

The documentation for this class was generated from the following file:

- `src/main/decaf/io/BufferedOutputStream.h`

6.141 decaf::net::BufferedSocket Class Reference

Buffered **Socket** (p.2964) class that wraps a **Socket** (p.2964) derived object and provides Buffered input and Output Streams to improve the efficiency of the reads and writes.

#include <src/main/decaf/net/BufferedSocket.h> Inheritance diagram for decaf::net::BufferedSocket:

Public Member Functions

- **BufferedSocket** (**Socket** *socket, int inputBufferSize=1000, int outputBufferSize=1000, bool own=true)
Constructs a new Buffered socket object.
- virtual ~**BufferedSocket** ()
- virtual void **connect** (const char *host, int port) throw (**SocketException**)
Connects to the specified destination.
- virtual void **close** () throw (**decaf::io::IOException**)
Closes this object and deallocates the appropriate resources.
- virtual bool **isConnected** () const
Indicates whether or not this socket is connected to a destination.
- virtual **io::InputStream** * **getInputStream** ()
Gets the InputStream for this socket.
- virtual **io::OutputStream** * **getOutputStream** ()
Gets the OutputStream for this socket.
- virtual int **getSoLinger** () const throw (**SocketException**)
Gets the linger time.
- virtual void **setSoLinger** (int linger) throw (**SocketException**)
Sets the linger time.
- virtual bool **getKeepAlive** () const throw (**SocketException**)
Gets the keep alive flag.
- virtual void **setKeepAlive** (bool keepAlive) throw (**SocketException**)
Enables/disables the keep alive flag.
- virtual int **getReceiveBufferSize** () const throw (**SocketException**)
Gets the receive buffer size.
- virtual void **setReceiveBufferSize** (int size) throw (**SocketException**)
Sets the receive buffer size.

- virtual bool **getReuseAddress** () const throw (SocketException)
Gets the reuse address flag.
- virtual void **setReuseAddress** (bool reuse) throw (SocketException)
Sets the reuse address flag.
- virtual int **getSendBufferSize** () const throw (SocketException)
Gets the send buffer size.
- virtual void **setSendBufferSize** (int size) throw (SocketException)
Sets the send buffer size.
- virtual int **getSoTimeout** () const throw (SocketException)
Gets the timeout for socket operations.
- virtual void **setSoTimeout** (int timeout) throw (SocketException)
Sets the timeout for socket operations.

6.141.1 Detailed Description

Buffered **Socket** (p.2964) class that wraps a **Socket** (p.2964) derived object and provides Buffered input and Output Streams to improve the efficiency of the reads and writes.

6.141.2 Constructor & Destructor Documentation

- 6.141.2.1** `decaf::net::BufferedSocket::BufferedSocket (Socket * socket, int inputBufferSize = 1000, int outputBufferSize = 1000, bool own = true)`

Constructs a new Buffered socket object.

Parameters:

socket the socket to buffer
inputBufferSize size of the input buffer
outputBufferSize size of the output buffer
own does this object own the passed socket

- 6.141.2.2** `virtual decaf::net::BufferedSocket::~~BufferedSocket ()` [virtual]

6.141.3 Member Function Documentation

- 6.141.3.1** `virtual void decaf::net::BufferedSocket::close () throw (decaf::io::IOException)` [virtual]

Closes this object and deallocates the appropriate resources.

Exceptions:

IOException

Implements **decaf::io::Closeable** (p.1019).

6.141.3.2 virtual void decaf::net::BufferedSocket::connect (const char * *host*, int *port*) throw (SocketException) [virtual]

Connects to the specified destination. Closes this socket if connected to another destination.

Parameters:

host The host of the server to connect to.

port The port of the server to connect to.

Exceptions:

IOException Thrown if a failure occurred in the connect.

Implements **decaf::net::Socket** (p. 2965).

6.141.3.3 virtual io::InputStream* decaf::net::BufferedSocket::getInputStream () [inline, virtual]

Gets the InputStream for this socket.

Returns:

The InputStream for this socket. NULL if not connected.

Implements **decaf::net::Socket** (p. 2966).

6.141.3.4 virtual bool decaf::net::BufferedSocket::getKeepAlive () const throw (SocketException) [inline, virtual]

Gets the keep alive flag.

Returns:

True if keep alive is enabled.

Exceptions:

SocketException (p. 2972) if the operation fails.

Implements **decaf::net::Socket** (p. 2966).

References **decaf::net::Socket::getKeepAlive()**.

6.141.3.5 virtual io::OutputStream* decaf::net::BufferedSocket::getOutputStream () [inline, virtual]

Gets the OutputStream for this socket.

Returns:

the OutputStream for this socket. NULL if not connected.

Implements **decaf::net::Socket** (p. 2966).

6.141.3.6 `virtual int decaf::net::BufferedSocket::getReceiveBufferSize () const throw (SocketException) [inline, virtual]`

Gets the receive buffer size.

Returns:

the receive buffer size in bytes.

Exceptions:

SocketException (p. 2972) if the operation fails.

Implements **decaf::net::Socket** (p. 2966).

References `decaf::net::Socket::getReceiveBufferSize()`.

6.141.3.7 `virtual bool decaf::net::BufferedSocket::getReuseAddress () const throw (SocketException) [inline, virtual]`

Gets the reuse address flag.

Returns:

True if the address can be reused.

Exceptions:

SocketException (p. 2972) if the operation fails.

Implements **decaf::net::Socket** (p. 2967).

References `decaf::net::Socket::getReuseAddress()`.

6.141.3.8 `virtual int decaf::net::BufferedSocket::getSendBufferSize () const throw (SocketException) [inline, virtual]`

Gets the send buffer size.

Returns:

the size in bytes of the send buffer.

Exceptions:

SocketException (p. 2972) if the operation fails.

Implements **decaf::net::Socket** (p. 2967).

References `decaf::net::Socket::getSendBufferSize()`.

6.141.3.9 `virtual int decaf::net::BufferedSocket::getSoLinger () const throw (SocketException) [inline, virtual]`

Gets the linger time.

Returns:

The linger time in seconds.

Exceptions:

SocketException (p. 2972) if the operation fails.

Implements **decaf::net::Socket** (p. 2967).

References **decaf::net::Socket::getSoLinger()**.

6.141.3.10 virtual int decaf::net::BufferedSocket::getSoTimeout () const throw (SocketException) [inline, virtual]

Gets the timeout for socket operations.

Returns:

The timeout in milliseconds for socket operations.

Exceptions:

SocketException (p. 2972) Thrown if unable to retrieve the information.

Implements **decaf::net::Socket** (p. 2967).

References **decaf::net::Socket::getSoTimeout()**.

6.141.3.11 virtual bool decaf::net::BufferedSocket::isConnected () const [inline, virtual]

Indicates whether or not this socket is connected to a destination.

Returns:

true if connected

Implements **decaf::net::Socket** (p. 2968).

References **decaf::net::Socket::isConnected()**.

6.141.3.12 virtual void decaf::net::BufferedSocket::setKeepAlive (bool *keepAlive*) throw (SocketException) [inline, virtual]

Enables/disables the keep alive flag.

Parameters:

keepAlive If true, enables the flag.

Exceptions:

SocketException (p. 2972) if the operation fails.

Implements **decaf::net::Socket** (p. 2968).

References **decaf::net::Socket::setKeepAlive()**.

6.141.3.13 `virtual void decaf::net::BufferedSocket::setReceiveBufferSize (int size)
throw (SocketException)` [inline, virtual]

Sets the receive buffer size.

Parameters:

size Number of bytes to set the receive buffer to.

Exceptions:

SocketException (p. 2972) if the operation fails.

Implements `decaf::net::Socket` (p. 2968).

References `decaf::net::Socket::setReceiveBufferSize()`.

6.141.3.14 `virtual void decaf::net::BufferedSocket::setReuseAddress (bool reuse)
throw (SocketException)` [inline, virtual]

Sets the reuse address flag.

Parameters:

reuse If true, sets the flag.

Exceptions:

SocketException (p. 2972) if the operation fails.

Implements `decaf::net::Socket` (p. 2969).

References `decaf::net::Socket::setReuseAddress()`.

6.141.3.15 `virtual void decaf::net::BufferedSocket::setSendBufferSize (int size)
throw (SocketException)` [inline, virtual]

Sets the send buffer size.

Parameters:

size The number of bytes to set the send buffer to.

Exceptions:

SocketException (p. 2972) if the operation fails.

Implements `decaf::net::Socket` (p. 2969).

References `decaf::net::Socket::setSendBufferSize()`.

6.141.3.16 `virtual void decaf::net::BufferedSocket::setSoLinger (int linger) throw (SocketException)` [inline, virtual]

Sets the linger time.

Parameters:

linger The linger time in seconds. If 0, linger is off.

Exceptions:

SocketException (p. 2972) if the operation fails.

Implements **decaf::net::Socket** (p. 2969).

References **decaf::net::Socket::setSoLinger()**.

**6.141.3.17 virtual void decaf::net::BufferedSocket::setSoTimeout (int *timeout*)
throw (SocketException) [inline, virtual]**

Sets the timeout for socket operations.

Parameters:

timeout The timeout in milliseconds for socket operations.

Exceptions:

SocketException (p. 2972) Thrown if unable to set the information.

Implements **decaf::net::Socket** (p. 2969).

References **decaf::net::Socket::setSoTimeout()**.

Wraps the passed buffer with a new LongBuffer.
- static **decaf::nio::LongBuffer * createLongBuffer** (std::vector< long long > &buffer)
Wraps the passed STL Long Vector in a LongBuffer.
- static **decaf::nio::IntBuffer * createIntBuffer** (std::size_t capacity)
Allocates a new int buffer whose position will be zero its limit will be its capacity and its mark is not set.
- static **decaf::nio::IntBuffer * createIntBuffer** (int *buffer, std::size_t offset, std::size_t length) throw (lang::exceptions::NullPointerException)
Wraps the passed buffer with a new IntBuffer.
- static **decaf::nio::IntBuffer * createIntBuffer** (std::vector< int > &buffer)
Wraps the passed STL int Vector in a IntBuffer.
- static **decaf::nio::ShortBuffer * createShortBuffer** (std::size_t capacity)
Allocates a new short buffer whose position will be zero its limit will be its capacity and its mark is not set.
- static **decaf::nio::ShortBuffer * createShortBuffer** (short *buffer, std::size_t offset, std::size_t length) throw (lang::exceptions::NullPointerException)
Wraps the passed buffer with a new ShortBuffer.
- static **decaf::nio::ShortBuffer * createShortBuffer** (std::vector< short > &buffer)
Wraps the passed STL Short Vector in a ShortBuffer.

6.142.1 Detailed Description

Factory class used by static methods in the **decaf::nio** (p.128) package to create the various default version of the NIO interfaces.

6.142.2 Constructor & Destructor Documentation

6.142.2.1 `virtual decaf::internal::nio::BufferFactory::~~BufferFactory () [inline, virtual]`

6.142.3 Member Function Documentation

6.142.3.1 `static decaf::nio::ByteBuffer* decaf::internal::nio::BufferFactory::createByteBuffer (std::vector< unsigned char > & buffer) [static]`

Wraps the passed STL Byte Vector in a ByteBuffer. The new buffer will be backed by the given byte array; modifications to the buffer will cause the array to be modified and vice versa. The new buffer's capacity and limit will be `buffer.size()`, its position will be zero, and its mark will be undefined. Its backing array will be the given array, and its array offset will be zero.

Parameters:

buffer - The vector that will back the new buffer, the vector must have been sized to the desired size already by calling `vector.resize(N)`.

Returns:

a new ByteBuffer that is backed by *buffer*, caller owns.

6.142.3.2 `static decaf::nio::ByteBuffer* decaf::internal::nio::BufferFactory::createByteBuffer (unsigned char * buffer, std::size_t offset, std::size_t length) throw (lang::exceptions::NullPointerException) [static]`

Wraps the passed buffer with a new ByteBuffer. The new buffer will be backed by the given byte array; that is, modifications to the buffer will cause the array to be modified and vice versa. The new buffer's capacity will be `array.length`, its position will be `offset`, its limit will be `offset + length`, and its mark will be undefined. Its backing array will be the given array, and its array offset will be zero.

Parameters:

buffer - The array that will back the new buffer

offset - The offset of the subarray to be used

length - The length of the subarray to be used

Returns:

a new ByteBuffer that is backed by *buffer*, caller owns.

6.142.3.3 `static decaf::nio::ByteBuffer* decaf::internal::nio::BufferFactory::createByteBuffer (std::size_t capacity) [static]`

Allocates a new byte buffer whose position will be zero its limit will be its capacity and its mark is not set.

Parameters:

capacity - the internal buffer's capacity.

Returns:

a newly allocated ByteBuffer which the caller owns.

6.142.3.4 static decaf::nio::CharBuffer* decaf::internal::nio::BufferFactory::createCharBuffer (std::vector< char > & *buffer*) [static]

Wraps the passed STL Byte Vector in a CharBuffer. The new buffer will be backed by the given byte array; modifications to the buffer will cause the array to be modified and vice versa. The new buffer's capacity and limit will be `buffer.size()`, its position will be zero, and its mark will be undefined. Its backing array will be the given array, and its array offset will be zero.

Parameters:

buffer - The vector that will back the new buffer, the vector must have been sized to the desired size already by calling `vector.resize(N)`.

Returns:

a new CharBuffer that is backed by *buffer*, caller owns.

6.142.3.5 static decaf::nio::CharBuffer* decaf::internal::nio::BufferFactory::createCharBuffer (char * *buffer*, std::size_t *offset*, std::size_t *length*) throw (lang::exceptions::NullPointerException) [static]

Wraps the passed buffer with a new CharBuffer. The new buffer will be backed by the given byte array; that is, modifications to the buffer will cause the array to be modified and vice versa. The new buffer's capacity will be `array.length`, its position will be `offset`, its limit will be `offset + length`, and its mark will be undefined. Its backing array will be the given array, and its array offset will be zero.

Parameters:

buffer - The array that will back the new buffer

offset - The offset of the subarray to be used

length - The length of the subarray to be used

Returns:

a new CharBuffer that is backed by *buffer*, caller owns.

6.142.3.6 static decaf::nio::CharBuffer* decaf::internal::nio::BufferFactory::createCharBuffer (std::size_t *capacity*) [static]

Allocates a new char buffer whose position will be zero its limit will be its capacity and its mark is not set.

Parameters:

capacity - the internal buffer's capacity.

Returns:

a newly allocated CharBuffer which the caller owns.

6.142.3.7 `static decaf::nio::DoubleBuffer* decaf::internal::nio::BufferFactory::createDoubleBuffer (std::vector< double > & buffer) [static]`

Wraps the passed STL Double Vector in a DoubleBuffer. The new buffer will be backed by the given byte array; modifications to the buffer will cause the array to be modified and vice versa. The new buffer's capacity and limit will be `buffer.size()`, its position will be zero, and its mark will be undefined. Its backing array will be the given array, and its array offset will be zero.

Parameters:

buffer - The vector that will back the new buffer, the vector must have been sized to the desired size already by calling `vector.resize(N)`.

Returns:

a new DoubleBuffer that is backed by *buffer*, caller owns.

6.142.3.8 `static decaf::nio::DoubleBuffer* decaf::internal::nio::BufferFactory::createDoubleBuffer (double * buffer, std::size_t offset, std::size_t length) throw (lang::exceptions::NullPointerException) [static]`

Wraps the passed buffer with a new DoubleBuffer. The new buffer will be backed by the given byte array; that is, modifications to the buffer will cause the array to be modified and vice versa. The new buffer's capacity will be `array.length`, its position will be `offset`, its limit will be `offset + length`, and its mark will be undefined. Its backing array will be the given array, and its array offset will be zero.

Parameters:

buffer - The array that will back the new buffer

offset - The offset of the subarray to be used

length - The length of the subarray to be used

Returns:

a new DoubleBuffer that is backed by *buffer*, caller owns.

6.142.3.9 `static decaf::nio::DoubleBuffer* decaf::internal::nio::BufferFactory::createDoubleBuffer (std::size_t capacity) [static]`

Allocates a new double buffer whose position will be zero its limit will be its capacity and its mark is not set.

Parameters:

capacity - the internal buffer's capacity.

Returns:

a newly allocated DoubleBuffer which the caller owns.

6.142.3.10 `static decaf::nio::FloatBuffer* decaf::internal::nio::BufferFactory::createFloatBuffer (std::vector< float > & buffer) [static]`

Wraps the passed STL Float Vector in a FloatBuffer. The new buffer will be backed by the given byte array; modifications to the buffer will cause the array to be modified and vice versa. The new buffer's capacity and limit will be `buffer.size()`, its position will be zero, and its mark will be undefined. Its backing array will be the given array, and its array offset will be zero.

Parameters:

buffer - The vector that will back the new buffer, the vector must have been sized to the desired size already by calling `vector.resize(N)`.

Returns:

a new DoubleBuffer that is backed by *buffer*, caller owns.

6.142.3.11 `static decaf::nio::FloatBuffer* decaf::internal::nio::BufferFactory::createFloatBuffer (float * buffer, std::size_t offset, std::size_t length) throw (lang::exceptions::NullPointerException) [static]`

Wraps the passed buffer with a new FloatBuffer. The new buffer will be backed by the given byte array; that is, modifications to the buffer will cause the array to be modified and vice versa. The new buffer's capacity will be `array.length`, its position will be `offset`, its limit will be `offset + length`, and its mark will be undefined. Its backing array will be the given array, and its array offset will be zero.

Parameters:

buffer - The array that will back the new buffer

offset - The offset of the subarray to be used

length - The length of the subarray to be used

Returns:

a new DoubleBuffer that is backed by *buffer*, caller owns.

6.142.3.12 `static decaf::nio::FloatBuffer* decaf::internal::nio::BufferFactory::createFloatBuffer (std::size_t capacity) [static]`

Allocates a new float buffer whose position will be zero its limit will be its capacity and its mark is not set.

Parameters:

capacity - the internal buffer's capacity.

Returns:

a newly allocated DoubleBuffer which the caller owns.

6.142.3.13 `static decaf::nio::IntBuffer* decaf::internal::nio::BufferFactory::createIntBuffer (std::vector< int > & buffer) [static]`

Wraps the passed STL int Vector in a IntBuffer. The new buffer will be backed by the given byte array; modifications to the buffer will cause the array to be modified and vice versa. The new buffer's capacity and limit will be `buffer.size()`, its position will be zero, and its mark will be undefined. Its backing array will be the given array, and its array offset will be zero.

Parameters:

buffer - The vector that will back the new buffer, the vector must have been sized to the desired size already by calling `vector.resize(N)`.

Returns:

a new DoubleBuffer that is backed by *buffer*, caller owns.

6.142.3.14 `static decaf::nio::IntBuffer* decaf::internal::nio::BufferFactory::createIntBuffer (int * buffer, std::size_t offset, std::size_t length) throw (lang::exceptions::NullPointerException) [static]`

Wraps the passed buffer with a new IntBuffer. The new buffer will be backed by the given byte array; that is, modifications to the buffer will cause the array to be modified and vice versa. The new buffer's capacity will be `array.length`, its position will be `offset`, its limit will be `offset + length`, and its mark will be undefined. Its backing array will be the given array, and its array offset will be zero.

Parameters:

buffer - The array that will back the new buffer

offset - The offset of the subarray to be used

length - The length of the subarray to be used

Returns:

a new DoubleBuffer that is backed by *buffer*, caller owns.

6.142.3.15 `static decaf::nio::IntBuffer* decaf::internal::nio::BufferFactory::createIntBuffer (std::size_t capacity) [static]`

Allocates a new int buffer whose position will be zero its limit will be its capacity and its mark is not set.

Parameters:

capacity - the internal buffer's capacity.

Returns:

a newly allocated DoubleBuffer which the caller owns.

6.142.3.16 `static decaf::nio::LongBuffer* decaf::internal::nio::BufferFactory::createLongBuffer (std::vector< long long > & buffer) [static]`

Wraps the passed STL Long Vector in a LongBuffer. The new buffer will be backed by the given byte array; modifications to the buffer will cause the array to be modified and vice versa. The new buffer's capacity and limit will be `buffer.size()`, its position will be zero, and its mark will be undefined. Its backing array will be the given array, and its array offset will be zero.

Parameters:

buffer - The vector that will back the new buffer, the vector must have been sized to the desired size already by calling `vector.resize(N)`.

Returns:

a new DoubleBuffer that is backed by *buffer*, caller owns.

6.142.3.17 `static decaf::nio::LongBuffer* decaf::internal::nio::BufferFactory::createLongBuffer (long long * buffer, std::size_t offset, std::size_t length) throw (lang::exceptions::NullPointerException) [static]`

Wraps the passed buffer with a new LongBuffer. The new buffer will be backed by the given byte array; that is, modifications to the buffer will cause the array to be modified and vice versa. The new buffer's capacity will be `array.length`, its position will be `offset`, its limit will be `offset + length`, and its mark will be undefined. Its backing array will be the given array, and its array offset will be zero.

Parameters:

buffer - The array that will back the new buffer

offset - The offset of the subarray to be used

length - The length of the subarray to be used

Returns:

a new DoubleBuffer that is backed by *buffer*, caller owns.

6.142.3.18 `static decaf::nio::LongBuffer* decaf::internal::nio::BufferFactory::createLongBuffer (std::size_t capacity) [static]`

Allocates a new long long buffer whose position will be zero its limit will be its capacity and its mark is not set.

Parameters:

capacity - the internal buffer's capacity.

Returns:

a newly allocated DoubleBuffer which the caller owns.

6.142.3.19 `static decaf::nio::ShortBuffer* decaf::internal::nio::BufferFactory::createShortBuffer (std::vector< short > & buffer) [static]`

Wraps the passed STL Short Vector in a ShortBuffer. The new buffer will be backed by the given byte array; modifications to the buffer will cause the array to be modified and vice versa. The new buffer's capacity and limit will be `buffer.size()`, its position will be zero, and its mark will be undefined. Its backing array will be the given array, and its array offset will be zero.

Parameters:

buffer - The vector that will back the new buffer, the vector must have been sized to the desired size already by calling `vector.resize(N)`.

Returns:

a new DoubleBuffer that is backed by *buffer*, caller owns.

6.142.3.20 `static decaf::nio::ShortBuffer* decaf::internal::nio::BufferFactory::createShortBuffer (short * buffer, std::size_t offset, std::size_t length) throw (lang::exceptions::NullPointerException) [static]`

Wraps the passed buffer with a new ShortBuffer. The new buffer will be backed by the given byte array; that is, modifications to the buffer will cause the array to be modified and vice versa. The new buffer's capacity will be `array.length`, its position will be `offset`, its limit will be `offset + length`, and its mark will be undefined. Its backing array will be the given array, and its array offset will be zero.

Parameters:

buffer - The array that will back the new buffer

offset - The offset of the subarray to be used

length - The length of the subarray to be used

Returns:

a new DoubleBuffer that is backed by *buffer*, caller owns.

6.142.3.21 `static decaf::nio::ShortBuffer* decaf::internal::nio::BufferFactory::createShortBuffer (std::size_t capacity) [static]`

Allocates a new short buffer whose position will be zero its limit will be its capacity and its mark is not set.

Parameters:

capacity - the internal buffer's capacity.

Returns:

a newly allocated DoubleBuffer which the caller owns.

6.143.1 Constructor & Destructor Documentation

6.143.1.1 decaf::nio::BufferOverflowException::BufferOverflowException () throw () [inline]

Default Constructor.

6.143.1.2 decaf::nio::BufferOverflowException::BufferOverflowException (const lang::Exception & ex) throw () [inline]

Copy Constructor.

Parameters:

ex the exception to copy

6.143.1.3 decaf::nio::BufferOverflowException::BufferOverflowException (const BufferOverflowException & *ex*) throw () [inline]

Copy Constructor.

Parameters:

ex the exception to copy, which is an instance of this type

6.143.1.4 decaf::nio::BufferOverflowException::BufferOverflowException (const char * *file*, const int *lineNumber*, const std::exception * *cause*, const char * *msg*, ...) throw () [inline]

Constructor - Initializes the file name and line number where this message occurred. Sets the message to report, using an optional list of arguments to parse into the message

Parameters:

file The file name where exception occurs

lineNumber The line number where the exception occurred.

cause The exception that was the cause for this one to be thrown.

msg The message to report

... list of primitives that are formatted into the message

6.143.1.5 decaf::nio::BufferOverflowException::BufferOverflowException (const std::exception * *cause*) throw () [inline]

Constructor.

Parameters:

cause Pointer to the exception that caused this one to be thrown, the object is cloned caller retains ownership.

6.143.1.6 decaf::nio::BufferOverflowException::BufferOverflowException (const char * *file*, const int *lineNumber*, const char * *msg*, ...) throw () [inline]

Constructor.

Parameters:

file The file name where exception occurs

lineNumber The line number where the exception occurred.

msg The message to report

... list of primitives that are formatted into the message

6.143.1.7 `virtual decaf::nio::BufferOverflowException::~~BufferOverflowException
() throw () [inline, virtual]`

6.143.2 Member Function Documentation

6.143.2.1 `virtual BufferOverflowException* de-
caf::nio::BufferOverflowException::clone () const [inline,

- `src/main/decaf/nio/BufferUnderflowException.h`

6.145 decaf::lang::Byte Class Reference

#include <src/main/decaf/lang/Byte.h> Inheritance diagram for decaf::lang::Byte:

Public Member Functions

- **Byte** (unsigned char value)
- **Byte** (const std::string &value) throw (exceptions::NumberFormatException)
- virtual ~**Byte** ()
- virtual int **compareTo** (const **Byte** &c) const
*Compares this **Byte** (p. 840) instance with another.*
- virtual bool **operator==** (const **Byte** &c) const
Compares equality between this object and the one passed.
- virtual bool **operator<** (const **Byte** &c) const
Compares this object to another and returns true if this object is considered to be less than the one passed.
- virtual int **compareTo** (const unsigned char &c) const
*Compares this **Byte** (p. 840) instance with a char type.*
- virtual bool **operator==** (const unsigned char &c) const
Compares equality between this object and the one passed.
- virtual bool **operator<** (const unsigned char &c) const
Compares this object to another and returns true if this object is considered to be less than the one passed.
- bool **equals** (const **Byte** &c) const
- bool **equals** (const unsigned char &c) const
- std::string **toString** () const
- virtual double **doubleValue** () const
Answers the double value which the receiver represents.
- virtual float **floatValue** () const
Answers the float value which the receiver represents.
- virtual unsigned char **byteValue** () const
Answers the byte value which the receiver represents.
- virtual short **shortValue** () const
Answers the short value which the receiver represents.
- virtual int **intValue** () const
Answers the int value which the receiver represents.
- virtual long long **longValue** () const
Answers the long value which the receiver represents.

Static Public Member Functions

- static std::string **toString** (unsigned char value)
- static **Byte decode** (const std::string &value) throw (exceptions::NumberFormatException)
*Decodes a String into a **Byte** (p. 840).*
- static unsigned char **parseByte** (const std::string &s, int radix) throw (exceptions::NumberFormatException)
Parses the string argument as a signed unsigned char in the radix specified by the second argument.
- static unsigned char **parseByte** (const std::string &s) throw (exceptions::NumberFormatException)
Parses the string argument as a signed decimal unsigned char.
- static **Byte valueOf** (unsigned char value)
*Returns a **Character** (p. 982) instance representing the specified char value.*
- static **Byte valueOf** (const std::string &value) throw (exceptions::NumberFormatException)
*Returns a **Byte** (p. 840) object holding the value given by the specified std::string.*
- static **Byte valueOf** (const std::string &value, int radix) throw (exceptions::NumberFormatException)
*Returns a **Byte** (p. 840) object holding the value extracted from the specified std::string when parsed with the radix given by the second argument.*

Static Public Attributes

- static const unsigned char **MIN_VALUE** = 0x7F
The minimum value that a unsigned char can take on.
- static const unsigned char **MAX_VALUE** = 0x80
The maximum value that a unsigned char can take on.
- static const int **SIZE** = 8
The size of the primitive charactor in bits.

6.145.1 Constructor & Destructor Documentation

6.145.1.1 decaf::lang::Byte::Byte (unsigned char *value*)

Parameters:

value - the primitive value to wrap

6.145.1.2 `decaf::lang::Byte::Byte (const std::string & value) throw (exceptions::NumberFormatException)`

Parameters:

value - the string to convert to an unsigned char

Exceptions:

NumberFormatException

6.145.1.3 `virtual decaf::lang::Byte::~~Byte () [inline, virtual]`

6.145.2 Member Function Documentation

6.145.2.1 `virtual unsigned char decaf::lang::Byte::byteValue () const [inline, virtual]`

Answers the byte value which the receiver represents.

Returns:

byte the value of the receiver.

Reimplemented from `decaf::lang::Number` (p. 2432).

6.145.2.2 `virtual int decaf::lang::Byte::compareTo (const unsigned char & c) const [inline, virtual]`

Compares this **Byte** (p. 840) instance with a char type.

Parameters:

c - the char instance to be compared

Returns:

zero if this object represents the same char value as the argument; a positive value if this object represents a value greater than the passed in value, and -1 if this object represents a value less than the passed in value.

Implements `decaf::lang::Comparable< unsigned char >` (p. 1083).

6.145.2.3 `virtual int decaf::lang::Byte::compareTo (const Byte & c) const [inline, virtual]`

Compares this **Byte** (p. 840) instance with another.

Parameters:

c - the **Byte** (p. 840) instance to be compared

Returns:

zero if this object represents the same char value as the argument; a positive value if this object represents a value greater than the passed in value, and -1 if this object represents a value less than the passed in value.

Implements **decaf::lang::Comparable**< **Byte** > (p.1083).

6.145.2.4 static Byte decaf::lang::Byte::decode (const std::string & value) throw (exceptions::NumberFormatException) [static]

Decodes a String into a **Byte** (p.840). Accepts decimal, hexadecimal, and octal numbers given by the following grammar:

The sequence of characters following an (optional) negative sign and/or radix specifier ("0x", "0X", "#", or leading zero) is parsed as by the **Byte::parseByte** (p.846) method with the indicated radix (10, 16, or 8). This sequence of characters must represent a positive value or a **NumberFormatException** will be thrown. The result is negated if first character of the specified String is the minus sign. No whitespace characters are permitted in the string.

Parameters:

value - The string to decode

Returns:

a **Byte** (p.840) object containing the decoded value

Exceptions:

NumberFormatException if the string is not formatted correctly.

6.145.2.5 virtual double decaf::lang::Byte::doubleValue () const [inline, virtual]

Answers the double value which the receiver represents.

Returns:

double the value of the receiver.

Implements **decaf::lang::Number** (p.2433).

6.145.2.6 bool decaf::lang::Byte::equals (const unsigned char & c) const [inline, virtual]**Returns:**

true if the two Bytes have the same value.

Implements **decaf::lang::Comparable**< **unsigned char** > (p.1084).

6.145.2.7 `bool decaf::lang::Byte::equals (const Byte & c) const [inline, virtual]`

Returns:

true if the two **Byte** (p. 840) Objects have the same value.

Implements **decaf::lang::Comparable**< **Byte** > (p.1084).

6.145.2.8 `virtual float decaf::lang::Byte::floatValue () const [inline, virtual]`

Answers the float value which the receiver represents.

Returns:

float the value of the receiver.

Implements **decaf::lang::Number** (p. 2433).

6.145.2.9 `virtual int decaf::lang::Byte::intValue () const [inline, virtual]`

Answers the int value which the receiver represents.

Returns:

int the value of the receiver.

Implements **decaf::lang::Number** (p. 2433).

6.145.2.10 `virtual long long decaf::lang::Byte::longValue () const [inline, virtual]`

Answers the long value which the receiver represents.

Returns:

long long the value of the receiver.

Implements **decaf::lang::Number** (p. 2433).

6.145.2.11 `virtual bool decaf::lang::Byte::operator< (const unsigned char & c) const [inline, virtual]`

Compares this object to another and returns true if this object is considered to be less than the one passed. This

Parameters:

c - the value to be compared to this one.

Returns:

true if this object is equal to the one passed.

Implements **decaf::lang::Comparable**< **unsigned char** > (p. 1084).

6.145.2.12 virtual bool decaf::lang::Byte::operator< (const Byte & c) const
[inline, virtual]

Compares this object to another and returns true if this object is considered to be less than the one passed. This

Parameters:

c - the value to be compared to this one.

Returns:

true if this object is equal to the one passed.

Implements **decaf::lang::Comparable< Byte >** (p.1084).

6.145.2.13 virtual bool decaf::lang::Byte::operator== (const unsigned char & c)
const [inline, virtual]

Compares equality between this object and the one passed.

Parameters:

c - the value to be compared to this one.

Returns:

true if this object is equal to the one passed.

Implements **decaf::lang::Comparable< unsigned char >** (p.1085).

6.145.2.14 virtual bool decaf::lang::Byte::operator== (const Byte & c) const
[inline, virtual]

Compares equality between this object and the one passed.

Parameters:

c - the value to be compared to this one.

Returns:

true if this object is equal to the one passed.

Implements **decaf::lang::Comparable< Byte >** (p.1085).

6.145.2.15 static unsigned char decaf::lang::Byte::parseByte (const std::string & s)
throw (exceptions::NumberFormatException) [static]

Parses the string argument as a signed decimal unsigned char. The characters in the string must all be decimal digits, except that the first character may be an ASCII minus sign '-' to indicate a negative value. The resulting unsigned char value is returned, exactly as if the argument and the radix 10 were given as arguments to the parseByte(const std::string, int) method.

Parameters:

s - String to convert to a unsigned char

Returns:

the converted unsigned char value

Exceptions:

NumberFormatException if the string is not a unsigned char.

6.145.2.16 `static unsigned char decaf::lang::Byte::parseByte (const std::string & s, int radix) throw (exceptions::NumberFormatException) [static]`

Parses the string argument as a signed unsigned char in the radix specified by the second argument. The characters in the string must all be digits, of the specified radix (as determined by whether **Character.digit(char, int)** (p. 985) returns a nonnegative value) except that the first character may be an ASCII minus sign '-' to indicate a negative value. The resulting byte value is returned.

An exception of type *NumberFormatException* is thrown if any of the following situations occurs:
 * The first argument is null or is a string of length zero. * The radix is either smaller than **Character.MIN_RADIX** (p. 989) or larger than **Character::MAX_RADIX** (p. 989). * Any character of the string is not a digit of the specified radix, except that the first character may be a minus sign '-' provided that the string is longer than length 1. * The value represented by the string is not a value of type unsigned char.

Parameters:

s - the String containing the unsigned char to be parsed

radix - the radix to be used while parsing s

Returns:

the unsigned char represented by the string argument in the specified radix.

Exceptions:

NumberFormatException - If String does not contain a parsable unsigned char.

6.145.2.17 `virtual short decaf::lang::Byte::shortValue () const [inline, virtual]`

Answers the short value which the receiver represents.

Returns:

short the value of the receiver.

Reimplemented from **decaf::lang::Number** (p. 2434).

6.145.2.18 `static std::string decaf::lang::Byte::toString (unsigned char value) [static]`

Returns:

a string representing the primitive value as Base 10

6.145.2.19 `std::string decaf::lang::Byte::toString () const`**Returns:**

this **Byte** (p. 840) Object as a String Representation

6.145.2.20 `static Byte decaf::lang::Byte::valueOf (const std::string & value, int radix) throw (exceptions::NumberFormatException) [static]`

Returns a **Byte** (p. 840) object holding the value extracted from the specified `std::string` when parsed with the radix given by the second argument. The first argument is interpreted as representing a signed unsigned char in the radix specified by the second argument, exactly as if the argument were given to the `parseByte(std::string, int)` method. The result is a **Byte** (p. 840) object that represents the unsigned char value specified by the string.

Parameters:

value - `std::string` to parse as base (radix)

radix - base of the string to parse.

Returns:

new **Byte** (p. 840) Object wrapping the primitive

Exceptions:

NumberFormatException if the string is not a valid unsigned char.

6.145.2.21 `static Byte decaf::lang::Byte::valueOf (const std::string & value) throw (exceptions::NumberFormatException) [static]`

Returns a **Byte** (p. 840) object holding the value given by the specified `std::string`. The argument is interpreted as representing a signed decimal unsigned char, exactly as if the argument were given to the `parseByte(std::string)` method. The result is a **Byte** (p. 840) object that represents the unsigned char value specified by the string.

Parameters:

value - `std::string` to parse as base 10

Returns:

new **Byte** (p. 840) Object wrapping the primitive

Exceptions:

NumberFormatException if the string is not a decimal unsigned char.

6.145.2.22 `static Byte decaf::lang::Byte::valueOf (unsigned char value) [inline, static]`

Returns a **Character** (p. 982) instance representing the specified char value.

Parameters:

value - the primitive char to wrap.

Returns:

a new **Character** (p. 982) instance that wraps this value.

6.145.3 Field Documentation

6.145.3.1 `const unsigned char decaf::lang::Byte::MAX_VALUE = 0x80` [static]

The maximum value that a unsigned char can take on.

6.145.3.2 `const unsigned char decaf::lang::Byte::MIN_VALUE = 0x7F` [static]

The minimum value that a unsigned char can take on.

6.145.3.3 `const int decaf::lang::Byte::SIZE = 8` [static]

The size of the primitive charactor in bits.

The documentation for this class was generated from the following file:

- `src/main/decaf/lang/Byte.h`

6.146 decaf::internal::util::ByteArrayAdapter Class Reference

This class adapts primitive type arrays to a base byte array so that the classes can inter-operate on the same base byte array without copying data.

#include <src/main/decaf/internal/util/ByteArrayAdapter.h> Inheritance diagram for decaf::internal::util::ByteArrayAdapter:

Data Structures

- union **Array**

Public Member Functions

- **ByteArrayAdapter** (std::size_t capacity)
Creates a byte array object that is allocated internally and is then owned and deleted when this object is deleted.
- **ByteArrayAdapter** (unsigned char *array, std::size_t capacity, bool own=false) throw (lang::exceptions::NullPointerException)
Creates a byte array object that wraps the given array.
- **ByteArrayAdapter** (char *array, std::size_t capacity, bool own=false) throw (lang::exceptions::NullPointerException)
Creates a byte array object that wraps the given array.
- **ByteArrayAdapter** (double *array, std::size_t capacity, bool own=false) throw (lang::exceptions::NullPointerException)
Creates a byte array object that wraps the given array.
- **ByteArrayAdapter** (float *array, std::size_t capacity, bool own=false) throw (lang::exceptions::NullPointerException)
Creates a byte array object that wraps the given array.
- **ByteArrayAdapter** (long long *array, std::size_t capacity, bool own=false) throw (lang::exceptions::NullPointerException)
Creates a byte array object that wraps the given array.
- **ByteArrayAdapter** (int *array, std::size_t capacity, bool own=false) throw (lang::exceptions::NullPointerException)
Creates a byte array object that wraps the given array.
- **ByteArrayAdapter** (short *array, std::size_t capacity, bool own=false) throw (lang::exceptions::NullPointerException)
Creates a byte array object that wraps the given array.
- virtual ~**ByteArrayAdapter** ()

- virtual std::size_t **getCapacity** () const
Gets the capacity of the underlying array.
- virtual std::size_t **getCharCapacity** () const
Gets the capacity of the underlying array as if it contains chars.
- virtual std::size_t **getDoubleCapacity** () const
Gets the capacity of the underlying array as if it contains doubles.
- virtual std::size_t **getFloatCapacity** () const
Gets the capacity of the underlying array as if it contains doubles.
- virtual std::size_t **getLongCapacity** () const
Gets the capacity of the underlying array as if it contains doubles.
- virtual std::size_t **getIntCapacity** () const
Gets the capacity of the underlying array as if it contains ints.
- virtual std::size_t **getShortCapacity** () const
Gets the capacity of the underlying array as if it contains shorts.
- virtual unsigned char * **getByteArray** ()
Gets the pointer to the array we are wrapping.
- virtual char * **getCharArray** ()
Gets the pointer to the array we are wrapping.
- virtual short * **getShortArray** ()
Gets the pointer to the array we are wrapping.
- virtual int * **getIntArray** ()
Gets the pointer to the array we are wrapping.
- virtual long long * **getLongArray** ()
Gets the pointer to the array we are wrapping.
- virtual double * **getDoubleArray** ()
Gets the pointer to the array we are wrapping.
- virtual float * **getFloatArray** ()
Gets the pointer to the array we are wrapping.
- virtual void **read** (unsigned char *buffer, std::size_t offset, std::size_t length) const throw (decaf::lang::exceptions::NullPointerException, decaf::nio::BufferUnderflowException)
Reads from the Byte array starting at the specified offset and reading the specified length.
- virtual void **write** (unsigned char *buffer, std::size_t offset, std::size_t length) throw (decaf::lang::exceptions::NullPointerException, decaf::nio::BufferOverflowException)
Writes from the Byte array given, starting at the specified offset and writing the specified amount of data into this objects internal array.

- virtual void **resize** (std::size_t capacity) throw (lang::exceptions::InvalidStateException)
Resizes the underlying array to the new given capacity, preserving all the Data that was previously in the array, unless the resize is smaller than the current size in which case only the data that will fit into the new array is preserved.
- virtual void **clear** ()
Clear all data from that Array, setting the underlying bytes to zero.
- unsigned char & **operator[]** (std::size_t index) throw (decaf::lang::exceptions::IndexOutOfBoundsException)
*Allows the **ByteArrayAdapter** (p. 849) to be indexed as a standard array.*
- const unsigned char & **operator[]** (std::size_t index) const throw (decaf::lang::exceptions::IndexOutOfBoundsException)
- virtual unsigned char **get** (std::size_t index) const throw (lang::exceptions::IndexOutOfBoundsException)
Absolute get method.
- virtual char **getChar** (std::size_t index) const throw (lang::exceptions::IndexOutOfBoundsException)
Reads one byte at the given index and returns it.
- virtual double **getDouble** (std::size_t index) const throw (lang::exceptions::IndexOutOfBoundsException)
Reads eight bytes at the given index and returns it.
- virtual double **getDoubleAt** (std::size_t index) const throw (lang::exceptions::IndexOutOfBoundsException)
Reads eight bytes at the given byte index and returns it.
- virtual float **getFloat** (std::size_t index) const throw (lang::exceptions::IndexOutOfBoundsException)
Reads four bytes at the given index and returns it.
- virtual float **getFloatAt** (std::size_t index) const throw (lang::exceptions::IndexOutOfBoundsException)
Reads four bytes at the given byte index and returns it.
- virtual long long **getLong** (std::size_t index) const throw (lang::exceptions::IndexOutOfBoundsException)
Reads eight bytes at the given index and returns it.
- virtual long long **getLongAt** (std::size_t index) const throw (lang::exceptions::IndexOutOfBoundsException)
Reads eight bytes at the given byte index and returns it.
- virtual int **getInt** (std::size_t index) const throw (lang::exceptions::IndexOutOfBoundsException)
Reads four bytes at the given index and returns it.

- virtual int **getIntAt** (std::size_t index) const throw (lang::exceptions::IndexOutOfBoundsException)
Reads four bytes at the given byte index and returns it.
- virtual short **getShort** (std::size_t index) const throw (lang::exceptions::IndexOutOfBoundsException)
Reads two bytes at the given index and returns it.
- virtual short **getShortAt** (std::size_t index) const throw (lang::exceptions::IndexOutOfBoundsException)
Reads two bytes at the given byte index and returns it.
- virtual **ByteArrayAdapter** & **put** (std::size_t index, unsigned char value) throw (lang::exceptions::IndexOutOfBoundsException)
Writes the given byte into this buffer at the given index.
- virtual **ByteArrayAdapter** & **putChar** (std::size_t index, char value) throw (lang::exceptions::IndexOutOfBoundsException)
Writes one byte containing the given value, into this buffer at the given index.
- virtual **ByteArrayAdapter** & **putDouble** (std::size_t index, double value) throw (lang::exceptions::IndexOutOfBoundsException)
Writes eight bytes containing the given value, into this buffer at the given index.
- virtual **ByteArrayAdapter** & **putDoubleAt** (std::size_t index, double value) throw (lang::exceptions::IndexOutOfBoundsException)
Writes eight bytes containing the given value, into this buffer at the given byte index.
- virtual **ByteArrayAdapter** & **putFloat** (std::size_t index, float value) throw (lang::exceptions::IndexOutOfBoundsException)
Writes four bytes containing the given value, into this buffer at the given index.
- virtual **ByteArrayAdapter** & **putFloatAt** (std::size_t index, float value) throw (lang::exceptions::IndexOutOfBoundsException)
Writes four bytes containing the given value, into this buffer at the given byte index.
- virtual **ByteArrayAdapter** & **putLong** (std::size_t index, long long value) throw (lang::exceptions::IndexOutOfBoundsException)
Writes eight bytes containing the given value, into this buffer at the given index.
- virtual **ByteArrayAdapter** & **putLongAt** (std::size_t index, long long value) throw (lang::exceptions::IndexOutOfBoundsException)
Writes eight bytes containing the given value, into this buffer at the given byte index.
- virtual **ByteArrayAdapter** & **putInt** (std::size_t index, int value) throw (lang::exceptions::IndexOutOfBoundsException)
Writes four bytes containing the given value, into this buffer at the given index.
- virtual **ByteArrayAdapter** & **putIntAt** (std::size_t index, int value) throw (lang::exceptions::IndexOutOfBoundsException)
Writes four bytes containing the given value, into this buffer at the given byte index.

- virtual **ByteArrayAdapter** & **putShort** (std::size_t index, short value) throw (lang::exceptions::IndexOutOfBoundsException)

Writes two bytes containing the given value, into this buffer at the given index.

- virtual **ByteArrayAdapter** & **putShortAt** (std::size_t index, short value) throw (lang::exceptions::IndexOutOfBoundsException)

Writes two bytes containing the given value, into this buffer at the given byte index.

6.146.1 Detailed Description

This class adapts primitive type arrays to a base byte array so that the classes can inter-operate on the same base byte array without copying data. All the array types are mapped down to a byte array and methods are supplied for accessing the data in any of the primitive type forms.

Methods in this class that do not return a specific value return a reference to this object so that calls can be chained.

6.146.2 Constructor & Destructor Documentation

6.146.2.1 decaf::internal::util::ByteArrayAdapter::ByteArrayAdapter (std::size_t capacity)

Creates a byte array object that is allocated internally and is then owned and deleted when this object is deleted. The array is initially created with all elements initialized to zero.

Parameters:

capacity - size of the array, this is the limit we read and write to.

6.146.2.2 decaf::internal::util::ByteArrayAdapter::ByteArrayAdapter (unsigned char * array, std::size_t capacity, bool own = false) throw (lang::exceptions::NullPointerException)

Creates a byte array object that wraps the given array. If the own flag is set then it will delete this array when this object is deleted.

Parameters:

array - array to wrap

capacity - size of the array, this is the limit we read and write to.

own - is this class now the owner of the pointer.

Exceptions:

NullPointerException if buffer is NULL

6.146.2.3 `decaf::internal::util::ByteArrayAdapter::ByteArrayAdapter (char * array, std::size_t capacity, bool own = false) throw (lang::exceptions::NullPointerException)`

Creates a byte array object that wraps the given array. If the own flag is set then it will delete this array when this object is deleted.

Parameters:

array - array to wrap

capacity - size of the array, this is the limit we read and write to.

own - is this class now the owner of the pointer.

Exceptions:

NullPointerException if buffer is NULL

6.146.2.4 `decaf::internal::util::ByteArrayAdapter::ByteArrayAdapter (double * array, std::size_t capacity, bool own = false) throw (lang::exceptions::NullPointerException)`

Creates a byte array object that wraps the given array. If the own flag is set then it will delete this array when this object is deleted.

Parameters:

array - array to wrap

capacity - size of the array, this is the limit we read and write to.

own - is this class now the owner of the pointer.

Exceptions:

NullPointerException if buffer is NULL

6.146.2.5 `decaf::internal::util::ByteArrayAdapter::ByteArrayAdapter (float * array, std::size_t capacity, bool own = false) throw (lang::exceptions::NullPointerException)`

Creates a byte array object that wraps the given array. If the own flag is set then it will delete this array when this object is deleted.

Parameters:

array - array to wrap

capacity - size of the array, this is the limit we read and write to.

own - is this class now the owner of the pointer.

Exceptions:

NullPointerException if buffer is NULL

6.146.2.6 decaf::internal::util::ByteArrayAdapter::ByteArrayAdapter (long long * *array*, std::size_t *capacity*, bool *own* = false) throw (lang::exceptions::NullPointerException)

Creates a byte array object that wraps the given array. If the own flag is set then it will delete this array when this object is deleted.

Parameters:

array - array to wrap

capacity - size of the array, this is the limit we read and write to.

own - is this class now the owner of the pointer.

Exceptions:

NullPointerException if buffer is NULL

6.146.2.7 decaf::internal::util::ByteArrayAdapter::ByteArrayAdapter (int * *array*, std::size_t *capacity*, bool *own* = false) throw (lang::exceptions::NullPointerException)

Creates a byte array object that wraps the given array. If the own flag is set then it will delete this array when this object is deleted.

Parameters:

array - array to wrap

capacity - size of the array, this is the limit we read and write to.

own - is this class now the owner of the pointer.

Exceptions:

NullPointerException if buffer is NULL

6.146.2.8 decaf::internal::util::ByteArrayAdapter::ByteArrayAdapter (short * *array*, std::size_t *capacity*, bool *own* = false) throw (lang::exceptions::NullPointerException)

Creates a byte array object that wraps the given array. If the own flag is set then it will delete this array when this object is deleted.

Parameters:

array - array to wrap

capacity - size of the array, this is the limit we read and write to.

own - is this class now the owner of the pointer.

Exceptions:

NullPointerException if buffer is NULL

6.146.2.9 virtual decaf::internal::util::ByteArrayAdapter::~~ByteArrayAdapter ()
[virtual]

6.146.3 Member Function Documentation

6.146.3.1 virtual void decaf::internal::util::ByteArrayAdapter::clear () [virtual]

Clear all data from that Array, setting the underlying bytes to zero.

6.146.3.2 virtual unsigned char decaf::internal::util::ByteArrayAdapter::get
(std::size_t *index*) const throw (
lang::exceptions::IndexOutOfBoundsException)
[virtual]

Absolute get method. Reads the byte at the given index.

Parameters:

index - the index in the Buffer where the byte is to be read

Returns:

the byte that is located at the given index

Exceptions:

IndexOutOfBoundsException - If index is not smaller than the buffer's limit

6.146.3.3 virtual unsigned char* de-
caaf::internal::util::ByteArrayAdapter::getByteArray ()
[inline, virtual]

Gets the pointer to the array we are wrapping. Changes to the data in this array are reflected by all **ByteArrayAdapter** (p. 849) objects that point to this array.

Returns:

an unsigned char* pointer to the array this object wraps.

6.146.3.4 virtual std::size_t decaf::internal::util::ByteArrayAdapter::getCapacity ()
const [inline, virtual]

Gets the capacity of the underlying array.

Returns:

the size the array.

6.146.3.5 virtual char decaf::internal::util::ByteArrayAdapter::getChar (std::size_t
index) const throw (lang::exceptions::IndexOutOfBoundsException)
[inline, virtual]

Reads one byte at the given index and returns it.

Parameters:

index - the index in the Buffer where the byte is to be read

Returns:

the char at the given index in the buffer

Exceptions:

IndexOutOfBoundsException - If index is not smaller than the buffer's limit

6.146.3.6 virtual char* decaf::internal::util::ByteArrayAdapter::getCharArray ()
[inline, virtual]

Gets the pointer to the array we are wrapping. Changes to the data in this array are reflected by all **ByteArrayAdapter** (p.849) objects that point to this array.

Returns:

an char* pointer to the array this object wraps.

6.146.3.7 virtual std::size_t decaf::internal::util::ByteArrayAdapter::getCharCapacity ()
const [inline, virtual]

Gets the capacity of the underlying array as if it contains chars.

Returns:

the size the array.

6.146.3.8 virtual double decaf::internal::util::ByteArrayAdapter::getDouble
(std::size_t *index*) const throw (
lang::exceptions::IndexOutOfBoundsException)
[virtual]

Reads eight bytes at the given index and returns it. The index is a relative to the size of the type to be read, in otherwords when accessing the element in the array `index * sizeof(type)` if the actual start index of the type to be read.

Parameters:

index - the index in the Buffer where the bytes are to be read

Returns:

the double at the given index in the buffer

Exceptions:

IndexOutOfBoundsException - If there are not enough bytes remaining to fill the requested Data Type

6.146.3.9 `virtual double* decaf::internal::util::ByteArrayAdapter::getDoubleArray
() [inline, virtual]`

Gets the pointer to the array we are wrapping. Changes to the data in this array are reflected by all **ByteArrayAdapter** (p.849) objects that point to this array.

Returns:

an double* pointer to the array this object wraps.

6.146.3.10 `virtual double decaf::internal::util::ByteArrayAdapter::getDoubleAt
(std::size_t index) const throw (
lang::exceptions::IndexOutOfBoundsException)
[virtual]`

Reads eight bytes at the given byte index and returns it.

Parameters:

index - the index in the Buffer where the bytes are to be read

Returns:

the double at the given index in the buffer

Exceptions:

IndexOutOfBoundsException - If there are not enough bytes remaining to fill the requested Data Type

6.146.3.11 `virtual std::size_t de-
cafe::internal::util::ByteArrayAdapter::getDoubleCapacity
() const [inline, virtual]`

Gets the capacity of the underlying array as if it contains doubles.

Returns:

the size the array.

6.146.3.12 `virtual float decaf::internal::util::ByteArrayAdapter::getFloat
(std::size_t index) const throw (
lang::exceptions::IndexOutOfBoundsException)
[virtual]`

Reads four bytes at the given index and returns it. The index is a relative to the size of the type to be read, in other words when accessing the element in the array `index * sizeof(type)` if the actual start index of the type to be read.

Parameters:

index - the index in the Buffer where the bytes are to be read

Returns:

the float at the given index in the buffer

Exceptions:

IndexOutOfBoundsException - If there are not enough bytes remaining to fill the requested Data Type

6.146.3.13 virtual float* decaf::internal::util::ByteArrayAdapter::getFloatArray ()
[inline, virtual]

Gets the pointer to the array we are wrapping. Changes to the data in this array are reflected by all **ByteArrayAdapter** (p.849) objects that point to this array.

Returns:

an float* pointer to the array this object wraps.

6.146.3.14 virtual float decaf::internal::util::ByteArrayAdapter::getFloatAt
(std::size_t *index*) const throw (
lang::exceptions::IndexOutOfBoundsException)
[virtual]

Reads four bytes at the given byte index and returns it.

Parameters:

index - the index in the Buffer where the bytes are to be read

Returns:

the float at the given index in the buffer

Exceptions:

IndexOutOfBoundsException - If there are not enough bytes remaining to fill the requested Data Type

6.146.3.15 virtual std::size_t de-
caf::internal::util::ByteArrayAdapter::getFloatCapacity ()
const [inline, virtual]

Gets the capacity of the underlying array as if it contains doubles.

Returns:

the size the array.

6.146.3.16 `virtual int decaf::internal::util::ByteArrayAdapter::getInt (std::size_t index) const throw (lang::exceptions::IndexOutOfBoundsException)`
[virtual]

Reads four bytes at the given index and returns it. The index is a relative to the size of the type to be read, in other words when accessing the element in the array `index * sizeof(type)` if the actual start index of the type to be read.

Parameters:

index - the index in the Buffer where the bytes are to be read

Returns:

the int at the given index in the buffer

Exceptions:

IndexOutOfBoundsException - If there are not enough bytes remaining to fill the requested Data Type

6.146.3.17 `virtual int* decaf::internal::util::ByteArrayAdapter::getIntArray ()`
[inline, virtual]

Gets the pointer to the array we are wrapping. Changes to the data in this array are reflected by all **ByteArrayAdapter** (p.849) objects that point to this array.

Returns:

an int* pointer to the array this object wraps.

6.146.3.18 `virtual int decaf::internal::util::ByteArrayAdapter::getIntAt (std::size_t index) const throw (lang::exceptions::IndexOutOfBoundsException)`
[virtual]

Reads four bytes at the given byte index and returns it.

Parameters:

index - the index in the Buffer where the bytes are to be read

Returns:

the int at the given index in the buffer

Exceptions:

IndexOutOfBoundsException - If there are not enough bytes remaining to fill the requested Data Type

6.146.3.19 `virtual std::size_t decaf::internal::util::ByteArrayAdapter::getIntCapacity () const [inline, virtual]`

Gets the capacity of the underlying array as if it contains ints.

Returns:

the size the array.

6.146.3.20 `virtual long long decaf::internal::util::ByteArrayAdapter::getLong (std::size_t index) const throw (lang::exceptions::IndexOutOfBoundsException) [virtual]`

Reads eight bytes at the given index and returns it. The index is a relative to the size of the type to be read, in other words when accessing the element in the array `index * sizeof(type)` if the actual start index of the type to be read.

Parameters:

index - the index in the Buffer where the bytes are to be read

Returns:

the long long at the given index in the buffer

Exceptions:

IndexOutOfBoundsException - If there are not enough bytes remaining to fill the requested Data Type

6.146.3.21 `virtual long long* decaf::internal::util::ByteArrayAdapter::getLongArray () [inline, virtual]`

Gets the pointer to the array we are wrapping. Changes to the data in this array are reflected by all **ByteArrayAdapter** (p. 849) objects that point to this array.

Returns:

an long long* pointer to the array this object wraps.

6.146.3.22 `virtual long long decaf::internal::util::ByteArrayAdapter::getLongAt (std::size_t index) const throw (lang::exceptions::IndexOutOfBoundsException) [virtual]`

Reads eight bytes at the given byte index and returns it.

Parameters:

index - the index in the Buffer where the bytes are to be read

Returns:

the long long at the given index in the buffer

Exceptions:

IndexOutOfBoundsException - If there are not enough bytes remaining to fill the requested Data Type

6.146.3.23 `virtual std::size_t decaf::internal::util::ByteArrayAdapter::getLongCapacity () const [inline, virtual]`

Gets the capacity of the underlying array as if it contains doubles.

Returns:

the size the array.

6.146.3.24 `virtual short decaf::internal::util::ByteArrayAdapter::getShort (std::size_t index) const throw (lang::exceptions::IndexOutOfBoundsException) [virtual]`

Reads two bytes at the given index and returns it. The index is a relative to the size of the type to be read, in other words when accessing the element in the array `index * sizeof(type)` if the actual start index of the type to be read.

Parameters:

index - the index in the Buffer where the bytes are to be read

Returns:

the short at the given index in the buffer

Exceptions:

IndexOutOfBoundsException - If there are not enough bytes remaining to fill the requested Data Type

6.146.3.25 `virtual short* decaf::internal::util::ByteArrayAdapter::getShortArray () [inline, virtual]`

Gets the pointer to the array we are wrapping. Changes to the data in this array are reflected by all **ByteArrayAdapter** (p. 849) objects that point to this array.

Returns:

an short* pointer to the array this object wraps.

6.146.3.26 virtual short decaf::internal::util::ByteArrayAdapter::getShortAt (std::size_t *index*) const throw (lang::exceptions::IndexOutOfBoundsException)
[virtual]

Reads two bytes at the given byte index and returns it.

Parameters:

index - the index in the Buffer where the bytes are to be read

Returns:

the short at the given index in the buffer

Exceptions:

IndexOutOfBoundsException - If there are not enough bytes remaining to fill the requested Data Type

6.146.3.27 virtual std::size_t decaf::internal::util::ByteArrayAdapter::getShortCapacity () const [inline, virtual]

Gets the capacity of the underlying array as if it contains shorts.

Returns:

the size the array.

6.146.3.28 const unsigned char& decaf::internal::util::ByteArrayAdapter::operator[] (std::size_t *index*) const throw (decaf::lang::exceptions::IndexOutOfBoundsException)

6.146.3.29 unsigned char& decaf::internal::util::ByteArrayAdapter::operator[] (std::size_t *index*) throw (decaf::lang::exceptions::IndexOutOfBoundsException)

Allows the **ByteArrayAdapter** (p. 849) to be indexed as a standard array. calling the non const version allows the user to change the value at index

Parameters:

index - the position in the array to access

Exceptions:

IndexOutOfBoundsException

6.146.3.30 `virtual ByteArrayAdapter& decaf::internal::util::ByteArrayAdapter::put (std::size_t index, unsigned char value) throw (lang::exceptions::IndexOutOfBoundsException)` [virtual]

Writes the given byte into this buffer at the given index. The index is a relative to the size of the type to be read, in other words when accessing the element in the array `index * sizeof(type)` if the actual start index of the type to be read.

Parameters:

index - position in the Buffer to write the data

value - the byte to write.

Returns:

a reference to this buffer

Exceptions:

IndexOutOfBoundsException - If index greater than the buffer's limit minus the size of the type being written.

6.146.3.31 `virtual ByteArrayAdapter& decaf::internal::util::ByteArrayAdapter::putChar (std::size_t index, char value) throw (lang::exceptions::IndexOutOfBoundsException)` [virtual]

Writes one byte containing the given value, into this buffer at the given index. The index is a relative to the size of the type to be read, in other words when accessing the element in the array `index * sizeof(type)` if the actual start index of the type to be read.

Parameters:

index - position in the Buffer to write the data

value - the value to write.

Returns:

a reference to this buffer

Exceptions:

IndexOutOfBoundsException - If index greater than the buffer's limit minus the size of the type being written.

6.146.3.32 `virtual ByteArrayAdapter& decaf::internal::util::ByteArrayAdapter::putDouble (std::size_t index, double value) throw (lang::exceptions::IndexOutOfBoundsException)` [virtual]

Writes eight bytes containing the given value, into this buffer at the given index. The index is a relative to the size of the type to be read, in other words when accessing the element in the array `index * sizeof(type)` if the actual start index of the type to be read.

Parameters:

index - position in the Buffer to write the data
value - the value to write.

Returns:

a reference to this buffer

Exceptions:

IndexOutOfBoundsException - If index greater than the buffer's limit minus the size of the type being written.

6.146.3.33 virtual ByteArrayAdapter& decaf::internal::util::ByteArrayAdapter::putDoubleAt (std::size_t *index*, double *value*) throw (lang::exceptions::IndexOutOfBoundsException)
[virtual]

Writes eight bytes containing the given value, into this buffer at the given byte index.

Parameters:

index - position in the Buffer to write the data
value - the value to write.

Returns:

a reference to this buffer

Exceptions:

IndexOutOfBoundsException - If index greater than the buffer's limit minus the size of the type being written.

6.146.3.34 virtual ByteArrayAdapter& decaf::internal::util::ByteArrayAdapter::putFloat (std::size_t *index*, float *value*) throw (lang::exceptions::IndexOutOfBoundsException)
[virtual]

Writes four bytes containing the given value, into this buffer at the given index. The index is a relative to the size of the type to be read, in other words when accessing the element in the array `index * sizeof(type)` if the actual start index of the type to be read.

Parameters:

index - position in the Buffer to write the data
value - the value to write.

Returns:

a reference to this buffer

Exceptions:

IndexOutOfBoundsException - If index greater than the buffer's limit minus the size of the type being written.

6.146.3.35 `virtual ByteArrayAdapter& de-
caf::internal::util::ByteArrayAdapter::putFloatAt (std::size_t index,
float value) throw (lang::exceptions::IndexOutOfBoundsException)
[virtual]`

Writes four bytes containing the given value, into this buffer at the given byte index.

Parameters:

index - position in the Buffer to write the data
value - the value to write.

Returns:

a reference to this buffer

Exceptions:

IndexOutOfBoundsException - If index greater than the buffer's limit minus the size of the type being written.

6.146.3.36 `virtual ByteArrayAdapter& de-
caf::internal::util::ByteArrayAdapter::putInt (std::size_t
index, int value) throw (lang::exceptions::IndexOutOfBoundsException
) [virtual]`

Writes four bytes containing the given value, into this buffer at the given index. The index is a relative to the size of the type to be read, in other words when accessing the element in the array `index * sizeof(type)` if the actual start index of the type to be read.

Parameters:

index - position in the Buffer to write the data
value - the value to write.

Returns:

a reference to this buffer

Exceptions:

IndexOutOfBoundsException - If index greater than the buffer's limit minus the size of the type being written.

6.146.3.37 `virtual ByteArrayAdapter& de-
caf::internal::util::ByteArrayAdapter::putIntAt (std::size_t index,
int value) throw (lang::exceptions::IndexOutOfBoundsException)
[virtual]`

Writes four bytes containing the given value, into this buffer at the given byte index.

Parameters:

index - position in the Buffer to write the data

value - the value to write.

Returns:

a reference to this buffer

Exceptions:

IndexOutOfBoundsException - If index greater than the buffer's limit minus the size of the type being written.

6.146.3.38 `virtual ByteArrayAdapter& decaf::internal::util::ByteArrayAdapter::putLong (std::size_t index, long long value) throw (lang::exceptions::IndexOutOfBoundsException) [virtual]`

Writes eight bytes containing the given value, into this buffer at the given index. The index is a relative to the size of the type to be read, in other words when accessing the element in the array `index * sizeof(type)` if the actual start index of the type to be read.

Parameters:

index - position in the Buffer to write the data

value - the value to write.

Returns:

a reference to this buffer

Exceptions:

IndexOutOfBoundsException - If index greater than the buffer's limit minus the size of the type being written.

6.146.3.39 `virtual ByteArrayAdapter& decaf::internal::util::ByteArrayAdapter::putLongAt (std::size_t index, long long value) throw (lang::exceptions::IndexOutOfBoundsException) [virtual]`

Writes eight bytes containing the given value, into this buffer at the given byte index.

Parameters:

index - position in the Buffer to write the data

value - the value to write.

Returns:

a reference to this buffer

Exceptions:

IndexOutOfBoundsException - If index greater than the buffer's limit minus the size of the type being written.

6.146.3.40 `virtual ByteArrayAdapter& decaf::internal::util::ByteArrayAdapter::putShort (std::size_t index, short value) throw (lang::exceptions::IndexOutOfBoundsException)` [virtual]

Writes two bytes containing the given value, into this buffer at the given index. The index is a relative to the size of the type to be read, in other words when accessing the element in the array `index * sizeof(type)` if the actual start index of the type to be read.

Parameters:

index - position in the Buffer to write the data

value - the value to write.

Returns:

a reference to this buffer

Exceptions:

IndexOutOfBoundsException - If index greater than the buffer's limit minus the size of the type being written.

6.146.3.41 `virtual ByteArrayAdapter& decaf::internal::util::ByteArrayAdapter::putShortAt (std::size_t index, short value) throw (lang::exceptions::IndexOutOfBoundsException)` [virtual]

Writes two bytes containing the given value, into this buffer at the given byte index.

Parameters:

index - position in the Buffer to write the data

value - the value to write.

Returns:

a reference to this buffer

Exceptions:

IndexOutOfBoundsException - If index greater than the buffer's limit minus the size of the type being written.

6.146.3.42 `virtual void decaf::internal::util::ByteArrayAdapter::read (unsigned char * buffer, std::size_t offset, std::size_t length) const throw (decaf::lang::exceptions::NullPointerException, decaf::nio::BufferUnderflowException)` [virtual]

Reads from the Byte array starting at the specified offset and reading the specified length. If the length is greater than the capacity of this underlying byte array then an `BufferUnderflowException` is thrown.

Parameters:

buffer - the buffer to read data from this array into.

offset - position in this array to start reading from.

length - the amount of data to read from this array.

Exceptions:

NullPointerException if buffer is null

BufferUnderflowException if there is not enough data to read because the offset or the length is greater than the size of this array.

6.146.3.43 virtual void decaf::internal::util::ByteArrayAdapter::resize (std::size_t capacity) throw (lang::exceptions::InvalidStateException) [virtual]

Resizes the underlying array to the new given capacity, preserving all the Data that was previously in the array, unless the resize is smaller than the current size in which case only the data that will fit into the new array is preserved. A **ByteArrayAdapter** (p. 849) can only be resized when it owns the underlying array, if it does not then it will throw an *InvalidStateException*.

Parameters:

capacity - the new capacity of the array.

Exceptions:

InvalidStateException if this object does not own the buffer.

6.146.3.44 virtual void decaf::internal::util::ByteArrayAdapter::write (unsigned char * buffer, std::size_t offset, std::size_t length) throw (decaf::lang::exceptions::NullPointerException, decaf::nio::BufferOverflowException) [virtual]

Writes from the Byte array given, starting at the specified offset and writing the specified amount of data into this objects internal array. . If the length is greater than the capacity of this underlying byte array then an *BufferOverflowException* is thrown.

Parameters:

buffer - the buffer to write get data written into this array.

offset - position in this array to start writing from.

length - the amount of data to write to this array.

Exceptions:

NullPointerException if buffer is null

BufferOverflowException if the amount of data to be written to this array or the offset given are larger than this array's capacity.

The documentation for this class was generated from the following file:

- src/main/decaf/internal/util/ByteArrayAdapter.h

6.147 decaf::internal::nio::ByteBuffer Class Reference

This class defines six categories of operations upon byte buffers:.

#include <src/main/decaf/internal/nio/ByteBuffer.h> Inheritance diagram for decaf::internal::nio::ByteBuffer:

Public Member Functions

- **ByteBuffer** (std::size_t capacity, bool readOnly=false)
*Creates a **ByteBuffer** (p. 870) object that has its backing array allocated internally and is then owned and deleted when this object is deleted.*
- **ByteBuffer** (unsigned char *array, std::size_t offset, std::size_t capacity, bool readOnly=false) throw (decaf::lang::exceptions::NullPointerException)
*Creates a **ByteBuffer** (p. 870) object that wraps the given array.*
- **ByteBuffer** (ByteBufferPerspective &array, std::size_t offset, std::size_t length, bool readOnly=false) throw (decaf::lang::exceptions::IndexOutOfBoundsException)
*Creates a byte buffer that wraps the passed **ByteBufferPerspective** (p. 908) and start at the given offset.*
- **ByteBuffer** (const ByteBuffer &other)
*Create a **ByteBuffer** (p. 870) that mirrors this one, meaning it shares a reference to this buffers **ByteBufferPerspective** (p. 908) and when changes are made to that data it is reflected in both.*
- virtual ~ByteBuffer ()
- virtual bool isReadOnly () const
Tells whether or not this buffer is read-only.
- virtual unsigned char * array () throw (decaf::nio::ReadOnlyBufferException, decaf::lang::exceptions::UnsupportedOperationException)
Returns the byte array that backs this buffer.
- virtual std::size_t arrayOffset () const throw (decaf::nio::ReadOnlyBufferException, lang::exceptions::UnsupportedOperationException)
Returns the offset within this buffer's backing array of the first element of the buffer.
- virtual bool hasArray () const
Tells whether or not this buffer is backed by an accessible byte array.
- virtual decaf::nio::CharBuffer * asCharBuffer () const
Creates a view of this byte buffer as a char buffer.
- virtual decaf::nio::DoubleBuffer * asDoubleBuffer () const
Creates a view of this byte buffer as a double buffer.
- virtual decaf::nio::FloatBuffer * asFloatBuffer () const

Creates a view of this byte buffer as a float buffer.

- virtual **decaf::nio::IntBuffer** * **asIntBuffer** () const
Creates a view of this byte buffer as a int buffer.
- virtual **decaf::nio::LongBuffer** * **asLongBuffer** () const
Creates a view of this byte buffer as a long buffer.
- virtual **decaf::nio::ShortBuffer** * **asShortBuffer** () const
Creates a view of this byte buffer as a short buffer.
- virtual **ByteBuffer** * **asReadOnlyBuffer** () const
Creates a new, read-only byte buffer that shares this buffer's content.
- virtual **ByteBuffer** & **compact** () throw (decaf::nio::ReadOnlyBufferException)
Compacts this buffer.
- virtual **ByteBuffer** * **duplicate** ()
Creates a new byte buffer that shares this buffer's content.
- virtual unsigned char **get** () const throw (decaf::nio::BufferUnderflowException)
Relative get method.
- virtual unsigned char **get** (std::size_t index) const throw (lang::exceptions::IndexOutOfBoundsException)
Absolute get method.
- virtual char **getChar** () throw (decaf::nio::BufferUnderflowException)
Reads the next byte at this buffer's current position, and then increments the position by one.
- virtual char **getChar** (std::size_t index) const throw (lang::exceptions::IndexOutOfBoundsException)
Reads one byte at the given index and returns it.
- virtual double **getDouble** () throw (decaf::nio::BufferUnderflowException)
Reads the next eight bytes at this buffer's current position, and then increments the position by that amount.
- virtual double **getDouble** (std::size_t index) const throw (lang::exceptions::IndexOutOfBoundsException)
Reads eight bytes at the given index and returns it.
- virtual float **getFloat** () throw (decaf::nio::BufferUnderflowException)
Reads the next four bytes at this buffer's current position, and then increments the position by that amount.
- virtual float **getFloat** (std::size_t index) const throw (lang::exceptions::IndexOutOfBoundsException)
Reads four bytes at the given index and returns it.
- virtual long long **getLong** () throw (decaf::nio::BufferUnderflowException)

Reads the next eight bytes at this buffer's current position, and then increments the position by that amount.

- virtual long long **getLong** (std::size_t index) const throw (lang::exceptions::IndexOutOfBoundsException)

Reads eight bytes at the given index and returns it.

- virtual int **getInt** () throw (decaf::nio::BufferUnderflowException)

Reads the next four bytes at this buffer's current position, and then increments the position by that amount.

- virtual int **getInt** (std::size_t index) const throw (lang::exceptions::IndexOutOfBoundsException)

Reads four bytes at the given index and returns it.

- virtual short **getShort** () throw (decaf::nio::BufferUnderflowException)

Reads the next two bytes at this buffer's current position, and then increments the position by that amount.

- virtual short **getShort** (std::size_t index) const throw (lang::exceptions::IndexOutOfBoundsException)

Reads two bytes at the given index and returns it.

- virtual **ByteBuffer** & **put** (unsigned char value) throw (decaf::nio::BufferOverflowException, decaf::nio::ReadOnlyBufferException)

Writes the given byte into this buffer at the current position, and then increments the position.

- virtual **ByteBuffer** & **put** (std::size_t index, unsigned char value) throw (lang::exceptions::IndexOutOfBoundsException, decaf::nio::ReadOnlyBufferException)

Writes the given byte into this buffer at the given index.

- virtual **ByteBuffer** & **putChar** (char value) throw (decaf::nio::BufferOverflowException, decaf::nio::ReadOnlyBufferException)

Writes one byte containing the given value, into this buffer at the current position, and then increments the position by one.

- virtual **ByteBuffer** & **putChar** (std::size_t index, char value) throw (lang::exceptions::IndexOutOfBoundsException, decaf::nio::ReadOnlyBufferException)

Writes one byte containing the given value, into this buffer at the given index.

- virtual **ByteBuffer** & **putDouble** (double value) throw (decaf::nio::BufferOverflowException, decaf::nio::ReadOnlyBufferException)

Writes eight bytes containing the given value, into this buffer at the current position, and then increments the position by eight.

- virtual **ByteBuffer** & **putDouble** (std::size_t index, double value) throw (lang::exceptions::IndexOutOfBoundsException, decaf::nio::ReadOnlyBufferException)

Writes eight bytes containing the given value, into this buffer at the given index.

- virtual **ByteBuffer** & **putFloat** (float value) throw (decaf::nio::BufferOverflowException, decaf::nio::ReadOnlyBufferException)

Writes four bytes containing the given value, into this buffer at the current position, and then increments the position by eight.

- virtual **ByteBuffer** & **putFloat** (std::size_t index, float value) throw (lang::exceptions::IndexOutOfBoundsException, decaf::nio::ReadOnlyBufferException)

Writes four bytes containing the given value, into this buffer at the given index.

- virtual **ByteBuffer** & **putLong** (long long value) throw (decaf::nio::BufferOverflowException, decaf::nio::ReadOnlyBufferException)

Writes eight bytes containing the given value, into this buffer at the current position, and then increments the position by eight.

- virtual **ByteBuffer** & **putLong** (std::size_t index, long long value) throw (lang::exceptions::IndexOutOfBoundsException, decaf::nio::ReadOnlyBufferException)

Writes eight bytes containing the given value, into this buffer at the given index.

- virtual **ByteBuffer** & **putInt** (int value) throw (decaf::nio::BufferOverflowException, decaf::nio::ReadOnlyBufferException)

Writes four bytes containing the given value, into this buffer at the current position, and then increments the position by eight.

- virtual **ByteBuffer** & **putInt** (std::size_t index, int value) throw (lang::exceptions::IndexOutOfBoundsException, decaf::nio::ReadOnlyBufferException)

Writes four bytes containing the given value, into this buffer at the given index.

- virtual **ByteBuffer** & **putShort** (short value) throw (decaf::nio::BufferOverflowException, decaf::nio::ReadOnlyBufferException)

Writes two bytes containing the given value, into this buffer at the current position, and then increments the position by eight.

- virtual **ByteBuffer** & **putShort** (std::size_t index, short value) throw (lang::exceptions::IndexOutOfBoundsException, decaf::nio::ReadOnlyBufferException)

Writes two bytes containing the given value, into this buffer at the given index.

- virtual **ByteBuffer** * **slice** () const

Creates a new byte buffer whose content is a shared subsequence of this buffer's content.

Protected Member Functions

- virtual void **setReadOnly** (bool value)

*Sets this **ByteBuffer** (p. 870) as Read-Only.*

6.147.1 Detailed Description

This class defines six categories of operations upon byte buffers:. 1. Absolute and relative get and put methods that read and write single bytes; 2. Relative bulk get methods that transfer contiguous sequences of bytes from this buffer into an array; 3. Relative bulk put methods that transfer contiguous sequences of bytes from a byte array or some other byte buffer into this buffer;

4. Absolute and relative get and put methods that read and write values of other primitive types, translating them to and from sequences of bytes in a particular byte order; 5. Methods for creating view buffers, which allow a byte buffer to be viewed as a buffer containing values of some other primitive type; and 6. Methods for compacting, duplicating, and slicing a byte buffer.

Byte buffers can be created either by allocation, which allocates space for the buffer's content, or by wrapping an existing byte array into a buffer.

Access to binary data:

This class defines methods for reading and writing values of all other primitive types, except boolean. Primitive values are translated to (or from) sequences of bytes according to the buffer's current byte order.

For access to heterogeneous binary data, that is, sequences of values of different types, this class defines a family of absolute and relative get and put methods for each type. For 32-bit floating-point values, for example, this class defines:

float **getFloat()** (p. 882) float getFloat(int index) void **putFloat(float f)** (p. 888) void putFloat(int index, float f)

Corresponding methods are defined for the types char, short, int, long, and double. The index parameters of the absolute get and put methods are in terms of bytes rather than of the type being read or written.

For access to homogeneous binary data, that is, sequences of values of the same type, this class defines methods that can create views of a given byte buffer. A view buffer is simply another buffer whose content is backed by the byte buffer. Changes to the byte buffer's content will be visible in the view buffer, and vice versa; the two buffers' position, limit, and mark values are independent. The asFloatBuffer method, for example, creates an instance of the FloatBuffer class that is backed by the byte buffer upon which the method is invoked. Corresponding view-creation methods are defined for the types char, short, int, long, and double.

View buffers have two important advantages over the families of type-specific get and put methods described above:

A view buffer is indexed not in terms of bytes but rather in terms of the type-specific size of its values;

A view buffer provides relative bulk get and put methods that can transfer contiguous sequences of values between a buffer and an array or some other buffer of the same type; and

6.147.2 Constructor & Destructor Documentation

6.147.2.1 `decaf::internal::nio::ByteBuffer::ByteBuffer (std::size_t capacity, bool readOnly = false)`

Creates a **ByteBuffer** (p. 870) object that has its backing array allocated internally and is then owned and deleted when this object is deleted. The array is initially created with all elements initialized to zero.

Parameters:

capacity - size of the array, this is the limit we read and write to.

readOnly - should this buffer be read-only, default as false

6.147.2.2 decaf::internal::nio::ByteBuffer::ByteBuffer (unsigned char * *array*, std::size_t *offset*, std::size_t *capacity*, bool *readOnly* = false) throw (decaf::lang::exceptions::NullPointerException)

Creates a **ByteBuffer** (p. 870) object that wraps the given array. If the own flag is set then it will delete this array when this object is deleted.

Parameters:

array - array to wrap

offset - the position that is this buffers start pos.

capacity - size of the array, this is the limit we read and write to.

readOnly - should this buffer be read-only, default as false

Exceptions:

NullPointerException if buffer is NULL

6.147.2.3 decaf::internal::nio::ByteBuffer::ByteBuffer (ByteBufferPerspective & *array*, std::size_t *offset*, std::size_t *length*, bool *readOnly* = false) throw (decaf::lang::exceptions::IndexOutOfBoundsException)

Creates a byte buffer that wraps the passed **ByteBufferPerspective** (p. 908) and start at the given offset. The capacity and limit of the new **ByteBuffer** (p. 870) will be that of the remaining capacity of the passed buffer.

Parameters:

array - the **ByteBufferPerspective** (p. 908) to wrap

offset - the offset into array where the buffer starts

length - the length of the array we are wrapping or limit.

readOnly - is this a readOnly buffer.

Exceptions:

IndexOutOfBoundsException if offset is greater than array capacity.

6.147.2.4 decaf::internal::nio::ByteBuffer::ByteBuffer (const ByteBuffer & *other*)

Create a **ByteBuffer** (p. 870) that mirrors this one, meaning it shares a reference to this buffers **ByteBufferPerspective** (p. 908) and when changes are made to that data it is reflected in both.

Parameters:

other - the **ByteBuffer** (p. 870) this one is to mirror.

6.147.2.5 `virtual decaf::internal::nio::ByteBuffer::~~ByteBuffer ()`
[virtual]

6.147.3 Member Function Documentation

6.147.3.1 `virtual unsigned char* decaf::internal::nio::ByteBuffer::array`
`() throw (decaf::nio::ReadOnlyBufferException,`
`decaf::lang::exceptions::UnsupportedOperationException)` [virtual]

Returns the byte array that backs this buffer. Modifications to this buffer's content will cause the returned array's content to be modified, and vice versa.

Invoke the `hasArray` method before invoking this method in order to ensure that this buffer has an accessible backing array.

Returns:

The array that backs this buffer

Exceptions:

ReadOnlyBufferException - If this buffer is backed by an array but is read-only

UnsupportedOperationException - If this buffer is not backed by an accessible array

Implements `decaf::nio::ByteBuffer` (p. 918).

6.147.3.2 `virtual std::size_t decaf::internal::nio::ByteBuffer::arrayOffset`
`() const throw (decaf::nio::ReadOnlyBufferException,`
`lang::exceptions::UnsupportedOperationException)` [virtual]

Returns the offset within this buffer's backing array of the first element of the buffer. If this buffer is backed by an array then buffer position `p` corresponds to array index `p + arrayOffset()` (p. 876).

Invoke the `hasArray` method before invoking this method in order to ensure that this buffer has an accessible backing array.

Returns:

The offset within this buffer's array of the first element of the buffer

Exceptions:

ReadOnlyBufferException - If this buffer is backed by an array but is read-only

UnsupportedOperationException - If this buffer is not backed by an accessible array

Implements `decaf::nio::ByteBuffer` (p. 919).

6.147.3.3 `virtual decaf::nio::CharBuffer* de-`
`caf::internal::nio::ByteBuffer::asCharBuffer () const`
[inline, virtual]

Creates a view of this byte buffer as a char buffer. The content of the new buffer will start at this buffer's current position. Changes to this buffer's content will be visible in the new buffer, and vice versa; the two buffers' position, limit, and mark values will be independent.

The new buffer's position will be zero, its capacity and its limit will be the number of bytes remaining in this buffer, and its mark will be undefined. The new buffer will be read-only if, and only if, this buffer is read-only.

Returns:

the new Char Buffer, which the caller then owns.

Implements **decaf::nio::ByteBuffer** (p.919).

6.147.3.4 virtual decaf::nio::DoubleBuffer* decaf::internal::nio::ByteBuffer::asDoubleBuffer () const [inline, virtual]

Creates a view of this byte buffer as a double buffer. The content of the new buffer will start at this buffer's current position. Changes to this buffer's content will be visible in the new buffer, and vice versa; the two buffers' position, limit, and mark values will be independent.

The new buffer's position will be zero, its capacity and its limit will be the number of bytes remaining in this buffer divided by eight, and its mark will be undefined. The new buffer will be read-only if, and only if, this buffer is read-only.

Returns:

the new double Buffer, which the caller then owns.

Implements **decaf::nio::ByteBuffer** (p.919).

6.147.3.5 virtual decaf::nio::FloatBuffer* decaf::internal::nio::ByteBuffer::asFloatBuffer () const [inline, virtual]

Creates a view of this byte buffer as a float buffer. The content of the new buffer will start at this buffer's current position. Changes to this buffer's content will be visible in the new buffer, and vice versa; the two buffers' position, limit, and mark values will be independent.

The new buffer's position will be zero, its capacity and its limit will be the number of bytes remaining in this buffer divided by four, and its mark will be undefined. The new buffer will be read-only if, and only if, this buffer is read-only.

Returns:

the new float Buffer, which the caller then owns.

Implements **decaf::nio::ByteBuffer** (p.920).

6.147.3.6 virtual decaf::nio::IntBuffer* decaf::internal::nio::ByteBuffer::asIntBuffer () const [inline, virtual]

Creates a view of this byte buffer as a int buffer. The content of the new buffer will start at this buffer's current position. Changes to this buffer's content will be visible in the new buffer, and vice versa; the two buffers' position, limit, and mark values will be independent.

The new buffer's position will be zero, its capacity and its limit will be the number of bytes remaining in this buffer divided by four, and its mark will be undefined. The new buffer will be read-only if, and only if, this buffer is read-only.

Returns:

the new `int Buffer`, which the caller then owns.

Implements `decaf::nio::ByteBuffer` (p. 920).

6.147.3.7 `virtual decaf::nio::LongBuffer* decaf::internal::nio::ByteBuffer::asLongBuffer () const`
[inline, virtual]

Creates a view of this byte buffer as a long buffer. The content of the new buffer will start at this buffer's current position. Changes to this buffer's content will be visible in the new buffer, and vice versa; the two buffers' position, limit, and mark values will be independent.

The new buffer's position will be zero, its capacity and its limit will be the number of bytes remaining in this buffer divided by eight, and its mark will be undefined. The new buffer will be read-only if, and only if, this buffer is read-only.

Returns:

the new long `Buffer`, which the caller then owns.

Implements `decaf::nio::ByteBuffer` (p. 920).

6.147.3.8 `virtual ByteBuffer* decaf::internal::nio::ByteBuffer::asReadOnlyBuffer () const`
[virtual]

Creates a new, read-only byte buffer that shares this buffer's content. The content of the new buffer will be that of this buffer. Changes to this buffer's content will be visible in the new buffer; the new buffer itself, however, will be read-only and will not allow the shared content to be modified. The two buffers' position, limit, and mark values will be independent.

If this buffer is itself read-only then this method behaves in exactly the same way as the `duplicate` method.

The new buffer's capacity, limit, position, and mark values will be identical to those of this buffer.

Returns:

The new, read-only byte buffer which the caller then owns.

Implements `decaf::nio::ByteBuffer` (p. 921).

6.147.3.9 `virtual decaf::nio::ShortBuffer* decaf::internal::nio::ByteBuffer::asShortBuffer () const`
[inline, virtual]

Creates a view of this byte buffer as a short buffer. The content of the new buffer will start at this buffer's current position. Changes to this buffer's content will be visible in the new buffer, and vice versa; the two buffers' position, limit, and mark values will be independent.

The new buffer's position will be zero, its capacity and its limit will be the number of bytes remaining in this buffer divided by two, and its mark will be undefined. The new buffer will be read-only if, and only if, this buffer is read-only.

Returns:

the new short Buffer, which the caller then owns.

Implements **decaf::nio::ByteBuffer** (p. 921).

6.147.3.10 virtual ByteBuffer& decaf::internal::nio::ByteBuffer::compact () throw (decaf::nio::ReadOnlyBufferException) [virtual]

Compacts this buffer. The bytes between the buffer's current position and its limit, if any, are copied to the beginning of the buffer. That is, the byte at index $p = \text{position}()$ (p. 807) is copied to index zero, the byte at index $p + 1$ is copied to index one, and so forth until the byte at index $\text{limit}()$ (p. 807) - 1 is copied to index $n = \text{limit}()$ (p. 807) - 1 - p . The buffer's position is then set to $n+1$ and its limit is set to its capacity. The mark, if defined, is discarded.

The buffer's position is set to the number of bytes copied, rather than to zero, so that an invocation of this method can be followed immediately by an invocation of another relative put method.

Returns:

a reference to this **ByteBuffer** (p. 870)

Exceptions:

ReadOnlyBufferException - If this buffer is read-only

Implements **decaf::nio::ByteBuffer** (p. 921).

6.147.3.11 virtual ByteBuffer* decaf::internal::nio::ByteBuffer::duplicate () [virtual]

Creates a new byte buffer that shares this buffer's content. The content of the new buffer will be that of this buffer. Changes to this buffer's content will be visible in the new buffer, and vice versa; the two buffers' position, limit, and mark values will be independent.

The new buffer's capacity, limit, position, and mark values will be identical to those of this buffer. The new buffer will be read-only if, and only if, this buffer is read-only.

Returns:

a new Byte Buffer which the caller owns.

Implements **decaf::nio::ByteBuffer** (p. 922).

6.147.3.12 virtual unsigned char decaf::internal::nio::ByteBuffer::get (std::size_t index) const throw (lang::exceptions::IndexOutOfBoundsException) [virtual]

Absolute get method. Reads the byte at the given index.

Parameters:

index - the index in the Buffer where the byte is to be read

Returns:

the byte that is located at the given index

Exceptions:

IndexOutOfBoundsException - If index is not smaller than the buffer's limit

Implements **decaf::nio::ByteBuffer** (p. 922).

6.147.3.13 `virtual unsigned char decaf::internal::nio::ByteBuffer::get () const throw (decaf::nio::BufferUnderflowException) [virtual]`

Relative get method. Reads the byte at this buffer's current position, and then increments the position.

Returns:

The byte at the buffer's current position

Exceptions:

BufferUnderflowException - If the buffer's current position is not smaller than its limit

Implements **decaf::nio::ByteBuffer** (p. 923).

6.147.3.14 `virtual char decaf::internal::nio::ByteBuffer::getChar (std::size_t index) const throw (lang::exceptions::IndexOutOfBoundsException) [inline, virtual]`

Reads one byte at the given index and returns it.

Parameters:

index - the index in the Buffer where the byte is to be read

Returns:

the char at the given index in the buffer

Exceptions:

IndexOutOfBoundsException - If index is not smaller than the buffer's limit

Implements **decaf::nio::ByteBuffer** (p. 924).

6.147.3.15 `virtual char decaf::internal::nio::ByteBuffer::getChar () throw (decaf::nio::BufferUnderflowException) [inline, virtual]`

Reads the next byte at this buffer's current position, and then increments the position by one.

Returns:

the next char in the buffer..

Exceptions:

BufferUnderflowException - If there are no more bytes remaining in this buffer, meaning we have reached the set limit.

Implements **decaf::nio::ByteBuffer** (p. 924).

6.147.3.16 virtual double decaf::internal::nio::ByteBuffer::getDouble (std::size_t *index*) const throw (lang::exceptions::IndexOutOfBoundsException) [virtual]

Reads eight bytes at the given index and returns it.

Parameters:

index - the index in the Buffer where the bytes are to be read

Returns:

the double at the given index in the buffer

Exceptions:

IndexOutOfBoundsException - If there are not enough bytes remaining to fill the requested Data Type

Implements **decaf::nio::ByteBuffer** (p. 925).

6.147.3.17 virtual double decaf::internal::nio::ByteBuffer::getDouble () throw (decaf::nio::BufferUnderflowException) [virtual]

Reads the next eight bytes at this buffer's current position, and then increments the position by that amount.

Returns:

the next double in the buffer..

Exceptions:

BufferUnderflowException - If there are no more bytes remaining in this buffer, meaning we have reached the set limit.

Implements **decaf::nio::ByteBuffer** (p. 925).

6.147.3.18 virtual float decaf::internal::nio::ByteBuffer::getFloat (std::size_t *index*) const throw (lang::exceptions::IndexOutOfBoundsException) [virtual]

Reads four bytes at the given index and returns it.

Parameters:

index - the index in the Buffer where the bytes are to be read

Returns:

the float at the given index in the buffer

Exceptions:

IndexOutOfBoundsException - If there are not enough bytes remaining to fill the requested Data Type

Implements **decaf::nio::ByteBuffer** (p. 925).

6.147.3.19 **virtual float decaf::internal::nio::ByteArrayBuffer::getFloat () throw (decaf::nio::BufferUnderflowException) [virtual]**

Reads the next four bytes at this buffer's current position, and then increments the position by that amount.

Returns:

the next float in the buffer..

Exceptions:

BufferUnderflowException - If there are no more bytes remaining in this buffer, meaning we have reached the set limit.

Implements **decaf::nio::ByteBuffer** (p. 926).

6.147.3.20 **virtual int decaf::internal::nio::ByteArrayBuffer::getInt (std::size_t index) const throw (lang::exceptions::IndexOutOfBoundsException) [virtual]**

Reads four bytes at the given index and returns it.

Parameters:

index - the index in the Buffer where the bytes are to be read

Returns:

the int at the given index in the buffer

Exceptions:

IndexOutOfBoundsException - If there are not enough bytes remaining to fill the requested Data Type

Implements **decaf::nio::ByteBuffer** (p. 926).

6.147.3.21 `virtual int decaf::internal::nio::ByteBuffer::getInt () throw (decaf::nio::BufferUnderflowException) [virtual]`

Reads the next four bytes at this buffer's current position, and then increments the position by that amount.

Returns:

the next int in the buffer..

Exceptions:

BufferUnderflowException - If there are no more bytes remaining in this buffer, meaning we have reached the set limit.

Implements `decaf::nio::ByteBuffer` (p. 926).

6.147.3.22 `virtual long long decaf::internal::nio::ByteBuffer::getLong (std::size_t index) const throw (lang::exceptions::IndexOutOfBoundsException) [virtual]`

Reads eight bytes at the given index and returns it.

Parameters:

index - the index in the Buffer where the bytes are to be read

Returns:

the long long at the given index in the buffer

Exceptions:

IndexOutOfBoundsException - If there are not enough bytes remaining to fill the requested Data Type

Implements `decaf::nio::ByteBuffer` (p. 927).

6.147.3.23 `virtual long long decaf::internal::nio::ByteBuffer::getLong () throw (decaf::nio::BufferUnderflowException) [virtual]`

Reads the next eight bytes at this buffer's current position, and then increments the position by that amount.

Returns:

the next long long in the buffer..

Exceptions:

BufferUnderflowException - If there are no more bytes remaining in this buffer, meaning we have reached the set limit.

Implements `decaf::nio::ByteBuffer` (p. 927).

6.147.3.24 `virtual short decaf::internal::nio::ByteBuffer::getShort (std::size_t index) const throw (lang::exceptions::IndexOutOfBoundsException)`
[virtual]

Reads two bytes at the given index and returns it.

Parameters:

index - the index in the Buffer where the bytes are to be read

Returns:

the short at the given index in the buffer

Exceptions:

IndexOutOfBoundsException - If there are not enough bytes remaining to fill the requested Data Type

Implements `decaf::nio::ByteBuffer` (p. 927).

6.147.3.25 `virtual short decaf::internal::nio::ByteBuffer::getShort () throw (decaf::nio::BufferUnderflowException)` [virtual]

Reads the next two bytes at this buffer's current position, and then increments the position by that amount.

Returns:

the next short in the buffer..

Exceptions:

BufferUnderflowException - If there are no more bytes remaining in this buffer, meaning we have reached the set limit.

Implements `decaf::nio::ByteBuffer` (p. 928).

6.147.3.26 `virtual bool decaf::internal::nio::ByteBuffer::hasArray () const`
[inline, virtual]

Tells whether or not this buffer is backed by an accessible byte array. If this method returns true then the array and arrayOffset methods may safely be invoked. Subclasses should override this method if they do not have a backing array as this class always returns true.

Returns:

true if, and only if, this buffer is backed by an array and is not read-only

Implements `decaf::nio::ByteBuffer` (p. 928).

6.147.3.27 `virtual bool decaf::internal::nio::ByteBuffer::isReadOnly () const`
[inline, virtual]

Tells whether or not this buffer is read-only.

Returns:

true if, and only if, this buffer is read-only

Implements **decaf::nio::ByteBuffer** (p. 928).

6.147.3.28 `virtual ByteBuffer& decaf::internal::nio::ByteBuffer::put
(std::size_t index, unsigned char value) throw
(lang::exceptions::IndexOutOfBoundsException,
decaf::nio::ReadOnlyBufferException) [virtual]`

Writes the given byte into this buffer at the given index.

Parameters:

index - position in the Buffer to write the data

value - the byte to write.

Returns:

a reference to this buffer

Exceptions:

IndexOutOfBoundsException - If index greater than the buffer's limit minus the size of the type being written.

ReadOnlyBufferException - If this buffer is read-only

Implements **decaf::nio::ByteBuffer** (p. 929).

6.147.3.29 `virtual ByteBuffer& decaf::internal::nio::ByteBuffer::put
(unsigned char value) throw (decaf::nio::BufferOverflowException,
decaf::nio::ReadOnlyBufferException) [virtual]`

Writes the given byte into this buffer at the current position, and then increments the position.

Parameters:

value - the byte value to be written

Returns:

a reference to this buffer

Exceptions:

BufferOverflowException - If this buffer's current position is not smaller than its limit

ReadOnlyBufferException - If this buffer is read-only

Implements **decaf::nio::ByteBuffer** (p. 929).

6.147.3.30 `virtual ByteBuffer& decaf::internal::nio::ByteBuffer::putChar (std::size_t index, char value) throw (lang::exceptions::IndexOutOfBoundsException, decaf::nio::ReadOnlyBufferException)` [virtual]

Writes one byte containing the given value, into this buffer at the given index.

Parameters:

index - position in the Buffer to write the data
value - the value to write.

Returns:

a reference to this buffer

Exceptions:

IndexOutOfBoundsException - If index greater than the buffer's limit minus the size of the type being written.
ReadOnlyBufferException - If this buffer is read-only

Implements `decaf::nio::ByteBuffer` (p. 931).

6.147.3.31 `virtual ByteBuffer& decaf::internal::nio::ByteBuffer::putChar (char value) throw (decaf::nio::BufferOverflowException, decaf::nio::ReadOnlyBufferException)` [virtual]

Writes one byte containing the given value, into this buffer at the current position, and then increments the position by one.

Parameters:

value - The value to be written

Returns:

a reference to this buffer

Exceptions:

BufferOverflowException - If there are fewer than bytes remaining in this buffer than the size of the data to be written
ReadOnlyBufferException - If this buffer is read-only

Implements `decaf::nio::ByteBuffer` (p. 931).

6.147.3.32 `virtual ByteBuffer& decaf::internal::nio::ByteBuffer::putDouble (std::size_t index, double value) throw (lang::exceptions::IndexOutOfBoundsException, decaf::nio::ReadOnlyBufferException)` [virtual]

Writes eight bytes containing the given value, into this buffer at the given index.

Parameters:

index - position in the Buffer to write the data
value - the value to write.

Returns:

a reference to this buffer

Exceptions:

IndexOutOfBoundsException - If index greater than the buffer's limit minus the size of the type being written.

ReadOnlyBufferException - If this buffer is read-only

Implements **decaf::nio::ByteBuffer** (p. 932).

6.147.3.33 virtual ByteBuffer& decaf::internal::nio::ByteBuffer::putDouble (double *value*) throw (decaf::nio::BufferOverflowException, decaf::nio::ReadOnlyBufferException) [virtual]

Writes eight bytes containing the given value, into this buffer at the current position, and then increments the position by eight.

Parameters:

value - The value to be written

Returns:

a reference to this buffer

Exceptions:

BufferOverflowException - If there are fewer than bytes remaining in this buffer than the size of the data to be written

ReadOnlyBufferException - If this buffer is read-only

Implements **decaf::nio::ByteBuffer** (p. 932).

6.147.3.34 virtual ByteBuffer& decaf::internal::nio::ByteBuffer::putFloat (std::size_t *index*, float *value*) throw (lang::exceptions::IndexOutOfBoundsException, decaf::nio::ReadOnlyBufferException) [virtual]

Writes four bytes containing the given value, into this buffer at the given index.

Parameters:

index - position in the Buffer to write the data
value - the value to write.

Returns:

a reference to this buffer

Exceptions:

IndexOutOfBoundsException - If index greater than the buffer's limit minus the size of the type being written.

ReadOnlyBufferException - If this buffer is read-only

Implements **decaf::nio::ByteBuffer** (p. 933).

6.147.3.35 **virtual ByteBuffer& decaf::internal::nio::ByteBuffer::putFloat (float *value*) throw (decaf::nio::BufferOverflowException, decaf::nio::ReadOnlyBufferException) [virtual]**

Writes four bytes containing the given value, into this buffer at the current position, and then increments the position by eight.

Parameters:

value - The value to be written

Returns:

a reference to this buffer

Exceptions:

BufferOverflowException - If there are fewer than bytes remaining in this buffer than the size of the data to be written

ReadOnlyBufferException - If this buffer is read-only

Implements **decaf::nio::ByteBuffer** (p. 933).

6.147.3.36 **virtual ByteBuffer& decaf::internal::nio::ByteBuffer::putInt (std::size_t *index*, int *value*) throw (lang::exceptions::IndexOutOfBoundsException, decaf::nio::ReadOnlyBufferException) [virtual]**

Writes four bytes containing the given value, into this buffer at the given index.

Parameters:

index - position in the Buffer to write the data

value - the value to write.

Returns:

a reference to this buffer

Exceptions:

IndexOutOfBoundsException - If index greater than the buffer's limit minus the size of the type being written.

ReadOnlyBufferException - If this buffer is read-only

Implements **decaf::nio::ByteBuffer** (p. 933).

6.147.3.37 virtual ByteBuffer& decaf::internal::nio::ByteBuffer::putInt (int *value*) throw (decaf::nio::BufferOverflowException, decaf::nio::ReadOnlyBufferException) [virtual]

Writes four bytes containing the given value, into this buffer at the current position, and then increments the position by eight.

Parameters:

value - The value to be written

Returns:

a reference to this buffer

Exceptions:

BufferOverflowException - If there are fewer than bytes remaining in this buffer than the size of the data to be written

ReadOnlyBufferException - If this buffer is read-only

Implements decaf::nio::ByteBuffer (p. 934).

6.147.3.38 virtual ByteBuffer& decaf::internal::nio::ByteBuffer::putLong (std::size_t *index*, long long *value*) throw (lang::exceptions::IndexOutOfBoundsException, decaf::nio::ReadOnlyBufferException) [virtual]

Writes eight bytes containing the given value, into this buffer at the given index.

Parameters:

index - position in the Buffer to write the data

value - the value to write.

Returns:

a reference to this buffer

Exceptions:

IndexOutOfBoundsException - If index greater than the buffer's limit minus the size of the type being written.

ReadOnlyBufferException - If this buffer is read-only

Implements decaf::nio::ByteBuffer (p. 934).

6.147.3.39 virtual ByteBuffer& decaf::internal::nio::ByteBuffer::putLong (long long *value*) throw (decaf::nio::BufferOverflowException, decaf::nio::ReadOnlyBufferException) [virtual]

Writes eight bytes containing the given value, into this buffer at the current position, and then increments the position by eight.

Parameters:

value - The value to be written

Returns:

a reference to this buffer

Exceptions:

BufferOverflowException - If there are fewer than bytes remaining in this buffer than the size of the data to be written

ReadOnlyBufferException - If this buffer is read-only

Implements **decaf::nio::ByteBuffer** (p. 935).

6.147.3.40 `virtual ByteBuffer& decaf::internal::nio::ByteBuffer::putShort (std::size_t index, short value) throw (lang::exceptions::IndexOutOfBoundsException, decaf::nio::ReadOnlyBufferException) [virtual]`

Writes two bytes containing the given value, into this buffer at the given index.

Parameters:

index - position in the Buffer to write the data

value - the value to write.

Returns:

a reference to this buffer

Exceptions:

IndexOutOfBoundsException - If index greater than the buffer's limit minus the size of the type being written.

ReadOnlyBufferException - If this buffer is read-only

Implements **decaf::nio::ByteBuffer** (p. 935).

6.147.3.41 `virtual ByteBuffer& decaf::internal::nio::ByteBuffer::putShort (short value) throw (decaf::nio::BufferOverflowException, decaf::nio::ReadOnlyBufferException) [virtual]`

Writes two bytes containing the given value, into this buffer at the current position, and then increments the position by eight.

Parameters:

value - The value to be written

Returns:

a reference to this buffer

Exceptions:

BufferOverflowException - If there are fewer than bytes remaining in this buffer than the size of the data to be written

ReadOnlyBufferException - If this buffer is read-only

Implements **decaf::nio::ByteBuffer** (p. 935).

6.147.3.42 `virtual void decaf::internal::nio::ByteBuffer::setReadOnly (bool value) [inline, protected, virtual]`

Sets this **ByteBuffer** (p. 870) as Read-Only.

Parameters:

value - true if this buffer is to be read-only.

6.147.3.43 `virtual ByteBuffer* decaf::internal::nio::ByteBuffer::slice () const [virtual]`

Creates a new byte buffer whose content is a shared subsequence of this buffer's content. The content of the new buffer will start at this buffer's current position. Changes to this buffer's content will be visible in the new buffer, and vice versa; the two buffers' position, limit, and mark values will be independent.

The new buffer's position will be zero, its capacity and its limit will be the number of bytes remaining in this buffer, and its mark will be undefined. The new buffer will be read-only if, and only if, this buffer is read-only.

Returns:

the newly create **ByteBuffer** (p. 870) which the caller owns.

Implements **decaf::nio::ByteBuffer** (p. 936).

The documentation for this class was generated from the following file:

- `src/main/decaf/internal/nio/ByteBuffer.h`

6.148 decaf::io::ByteArrayInputStream Class Reference

Simple implementation of **InputStream** (p.1740) that wraps around an STL Vector `std::vector<unsigned char>`.

`#include <src/main/decaf/io/ByteArrayInputStream.h>` Inheritance diagram for `decaf::io::ByteArrayInputStream`:

Public Member Functions

- **ByteArrayInputStream** ()
Default Constructor.
- **ByteArrayInputStream** (const std::vector< unsigned char > &buffer)
Creates the input stream and calls setBuffer with the specified buffer object.
- **ByteArrayInputStream** (const unsigned char *buffer, std::size_t bufferSize)
Constructor.
- virtual ~**ByteArrayInputStream** ()
- virtual void **setBuffer** (const std::vector< unsigned char > &buffer)
Sets the internal buffer.
- virtual void **setByteArray** (const unsigned char *buffer, std::size_t bufferSize)
Sets the data that this reader uses, replaces any existing data and resets to beginning of the buffer.
- virtual std::size_t **available** () const throw (IOException)
Indicates the number of bytes available.
- virtual int **read** () throw (IOException)
Reads a single byte from the buffer.
- virtual int **read** (unsigned char *buffer, std::size_t offset, std::size_t bufferSize) throw (IOException, lang::exceptions::NullPointerException)
Reads an array of bytes from the buffer.
- virtual void **close** () throw (io::IOException)
Closes the target input stream.
- virtual std::size_t **skip** (std::size_t num) throw (io::IOException, lang::exceptions::UnsupportedOperationException)
Skips over and discards n bytes of data from this input stream.
- virtual void **mark** (int readLimit DECAF_UNUSED)
Marks the current position in the stream A subsequent call to the reset method repositions this stream at the last marked position so that subsequent reads re-read the same bytes.
- virtual void **reset** () throw (IOException)

Resets the read index to the beginning of the byte array, unless mark has been called and the markLimit has not been exceeded, in which case the stream is reset to the marked position.

- virtual bool **markSupported** () const

Determines if this input stream supports the mark and reset methods.

Protected Member Functions

- virtual void **lock** () throw (decaf::lang::exceptions::RuntimeException)

Locks the object.

- virtual bool **tryLock** () throw (decaf::lang::exceptions::RuntimeException)

Attempts to Lock the object, if the lock is already held by another thread than this method returns false.

- virtual void **unlock** () throw (decaf::lang::exceptions::RuntimeException)

Unlocks the object.

- virtual void **wait** () throw (decaf::lang::exceptions::RuntimeException, decaf::lang::exceptions::IllegalMonitorStateException, decaf::lang::exceptions::InterruptedException)

Waits on a signal from this object, which is generated by a call to Notify.

- virtual void **wait** (long long millisecs) throw (decaf::lang::exceptions::RuntimeException, decaf::lang::exceptions::IllegalMonitorStateException, decaf::lang::exceptions::InterruptedException)

Waits on a signal from this object, which is generated by a call to Notify.

- virtual void **wait** (long long millisecs, int nanos) throw (decaf::lang::exceptions::RuntimeException, decaf::lang::exceptions::IllegalArgumentException, decaf::lang::exceptions::IllegalMonitorStateException, decaf::lang::exceptions::InterruptedException)

Waits on a signal from this object, which is generated by a call to Notify.

- virtual void **notify** () throw (decaf::lang::exceptions::RuntimeException, decaf::lang::exceptions::IllegalMonitorStateException)

Signals a waiter on this object that it can now wake up and continue.

- virtual void **notifyAll** () throw (decaf::lang::exceptions::RuntimeException, decaf::lang::exceptions::IllegalMonitorStateException)

Signals the waiters on this object that it can now wake up and continue.

6.148.1 Detailed Description

Simple implementation of **InputStream** (p.1740) that wraps around an STL Vector `std::vector<unsigned char>`. Closing a **ByteArrayInputStream** (p.892) has no effect. The methods in this class can be called after the stream has been closed without generating an **IOException** (p.1820).

6.148.2 Constructor & Destructor Documentation

6.148.2.1 `decaf::io::ByteArrayInputStream::ByteArrayInputStream ()`

Default Constructor.

6.148.2.2 `decaf::io::ByteArrayInputStream::ByteArrayInputStream (const std::vector< unsigned char > & buffer)`

Creates the input stream and calls `setBuffer` with the specified buffer object.

Parameters:

buffer The buffer to be used.
